

# *Intermezzo ? - Intermezzi !*

Started early with the hardware & software interplay (2nd year of physics and numerical mathematics study at Mainz): extended an Algol 60 compiler with interval arithmetics and double precision, had to start from (decimal) machine code

Mainz Microtron MAMI (while finishing PhD work on  $J/\psi$ ): non-linear simulation in software and hardware, control system on two connected computers, first operation

*1st journey to Nepal*

Many years of HEP at OPAL, with excursions to UA1, JADE and STAR

Physicist in a different setting: five years in a software company at Bern for Swiss Telecom, an interesting detour as it turned out

Then, found my way back closer to science at DESY

*a year of trekking and expeditions in the Himalayas and Andes*

Until last August, with MPP at ATLAS!

## THE DESIGN OF A CASCADED 800 MeV NORMAL CONDUCTING C. W. RACE TRACK MICROTRON\*

H. HERMINGHAUS, A. FEDER, K. H. KAISER, W. MANZ and H. v. d. SCHMITT

*Institut für Kernphysik der Johannes Gutenberg-Universität, Mainz, W. Germany*

Received 9 July 1976

A c.w. electron accelerator of 820 MeV maximum output energy at  $100 \mu\text{A}$  beam current is proposed to make possible a large variety of coincidence experiments with medium energy electrons and photons as a future possibility of new, interesting experiments. It consists of a preaccelerator and 3 cascaded race track microtrons using normal conducting rf structures. The design of this accelerator, based on detailed computational investigations of its beam dynamics and some experimental studies, is communicated and partly discussed in this paper.

Mera Peak

A landscape photograph showing a calm body of water in the foreground, reflecting the sky and the surrounding environment. The sky is a deep blue, filled with large, fluffy white clouds. In the background, there are several snow-covered mountains or hills. The water is very still, creating a clear mirror image of the sky and the snow-covered land. The overall scene is serene and peaceful.

In higher altitudes ...
