

Build process: MaGe, MGDO

Michael Marino
MaGe Meeting, München
20 Jan 2010

Current Procedure

- Uses autoconf, make, to resolve dependencies
- `./configure [options]; make`
- Designed for simple compilation procedure, simple configuration options
- Based upon Geant4 make procedure

Issues

- Add 'make test' functionality to auto-perform benchmarks
- Number of packages growing, devise overall procedure (script) for grabbing, building the full project?
- 64-bit compilation (Mac OS X)

Issues

- Comments on user experience?
- Any other updates to build process (scons?)?
