Partial Events

to offline:  
Tier0 at CERN  
and worldwide

Processors      Buffers      Switches

# Infrastructure work on HLT level

- ◆ Data stream to MDT centres
- ◆ Accompanied by conditions data replication to MDT centres
- ◆ see Oliver's slide
  
- ◆ Similar request by ID groups - but much lower rate, no need to branch off Lvl2
- ◆ Stream of partial events to be produced by SFOs
  - ◆ form sub-events based on list of ROBs
- ◆ In addition to other SFO streams (5\* RAW physics, express, other calib)
  
- ◆ Proposed hardware track trigger preceding Lvl2
- ◆ Alternative to the fully SW-based Lvl2
- ◆ Interesting for B and tau physics
- ◆ Based on CDF experience, but much bigger lookup tables
  - ◆ "Proposal to prepare a technical design report for FTK, a hardware track finder upgrade to the ATLAS trigger"
  - ◆ Main author Mel Shochet / Chicago
  - ◆ 1-year R&D period will probably be recommended

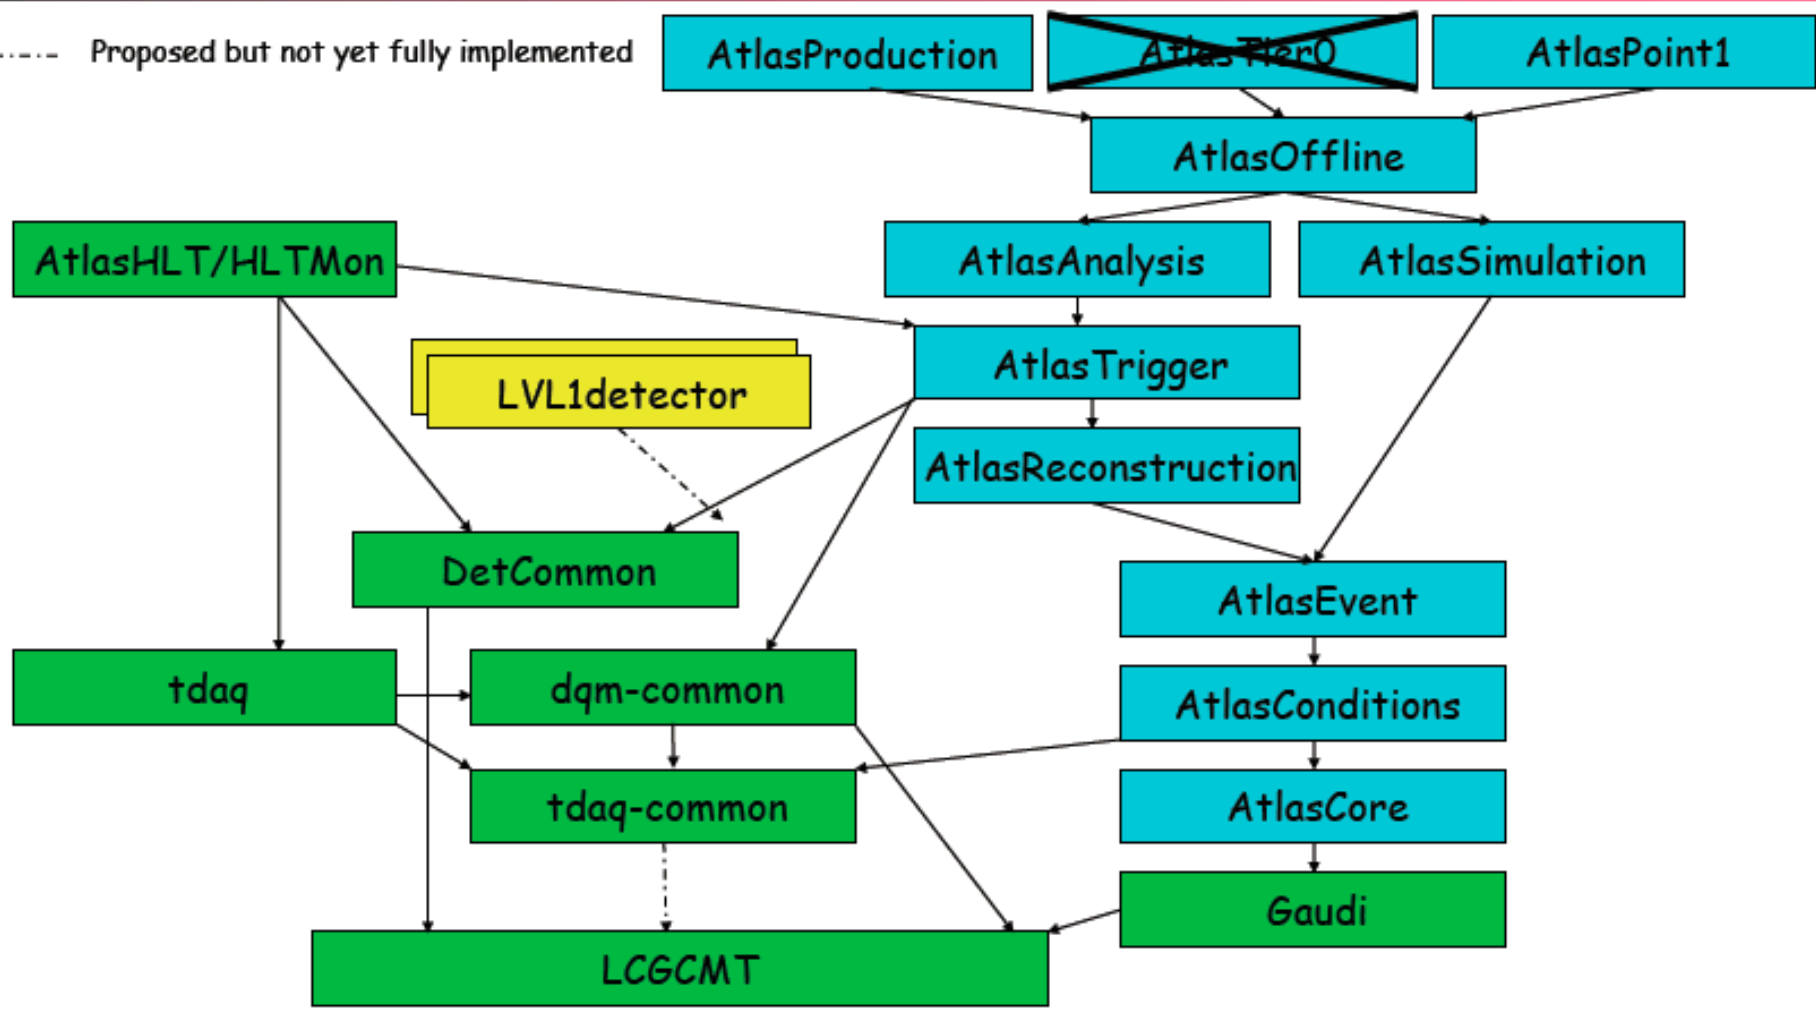

# Offline, TDAQ, and HLT software releases

- ◆ Co-ordinated by GRC - Global Release Co-ordination group
- ◆ Led by David Quarrie, Livio Mapelli
- ◆ ~ bi-weekly meetings
  
- ◆ Very successful in speeding up the time it takes from offline release availability to usage at Point1, in HLT Selection & Monitoring
- ◆ HLT nightlies tied in with offline nightlies
- ◆ LCG is common denominator - next release **LCG-54**
- ◆ Important: patching strategy
  
- ◆ Installation at Point1 now via RPMs for online, offline, HLT
  - ◆ Derived from Pacman kits so identical contents

# Project Dependencies

←----- Proposed but not yet fully implemented

# Schedule for 13.2.0 and 14.0.0

- 13.2.0: 29 Jan
  - Targetted towards M6
  - Based upon LCG\_53f for compatibility with tdaq-1.8.4
- 14.0.0: 26 Feb
  - Targetted towards global cosmics, FDR-2 and simulation for first physics data
  - Baseline for reconstruction for first physics data
- 15.0.0: May?
  - No decision yet, but could be used for reconstruction and analysis of first physics data in order to incorporate feedback from FDR-2 and global cosmics
- Problem is that 13.2.0 might be a bit too early for M6
  - Implies copying tags from main branch into 13.2.1 (tendency for divergence)
  - Possible alternative might be to put LCG\_54 into main nightlies (13.X.0) and LCG\_53f into "migration" nightly (c.f. 13.X.0-MIG0) for some time
    - Build 13.2.0 closer to M6

# Patching Strategy

- Treat AtlasPoint1 and AtlasProduction as essentially identical apart from timescales
  - AtlasPoint1 used for Point1/Tier0 and Calibration Tier-2 processing
  - AtlasProduction used for remote processing and reprocessing of ATLAS data
- Patch tags go to both AtlasPoint1 (point1) and AtlasProduction (pcache) nightlies
  - Apart from AtlasSimulation tags which don't go to AtlasPoint1
- Validation based on RTT & FCT tests
  - Need to extend the Point1-specific tests
- AtlasPoint1 patches deployed within ~24 hours
  - After validation and as needed
- AtlasProduction patches deployed every 2 weeks
- Nightlies in support of this setup for 13.0.40.X already and will be for all future releases

# TDAQ releases

- **tdaq-01-08-04**
  - *Built on 18-Dec-07*
  - *Content – [Release notes](#)*
  - *Externals – LCG\_53f*
  - *Installed in Point 1*
  - *To be used for M6*
- **tdaq-common-01-09-00 (tdaq-common-02-00-00 ?)**
  - *hltinterface, EventStorage, EventFormat , ...*
  - *New Boost version*
  - *Build date (preliminary) – End of Jan 08*
- **tdaq-01-09-00**
  - *Content – [TDAQ Release Planning](#) twiki page*
  - *New externals*
  - *Synchronized with Offline 14.0.X*
  - *Build date: End of Feb 08*

# AtlasHLT 13.2.0 Nightlies

- Compiles since last week
  - Mostly workaround for problems related to as-needed flags, <constituent>\_shlibsflags, trivial fixes
  - Private builds on pcatb cluster so far (to repeat quickly)
  - New CMT warnings from TDAQCPolicy and TDAQCEXternal...
- Today: rel\_1 opt on AFS
  - not all web links correct yet
  - Some integration tests don't finish (kill by hand)

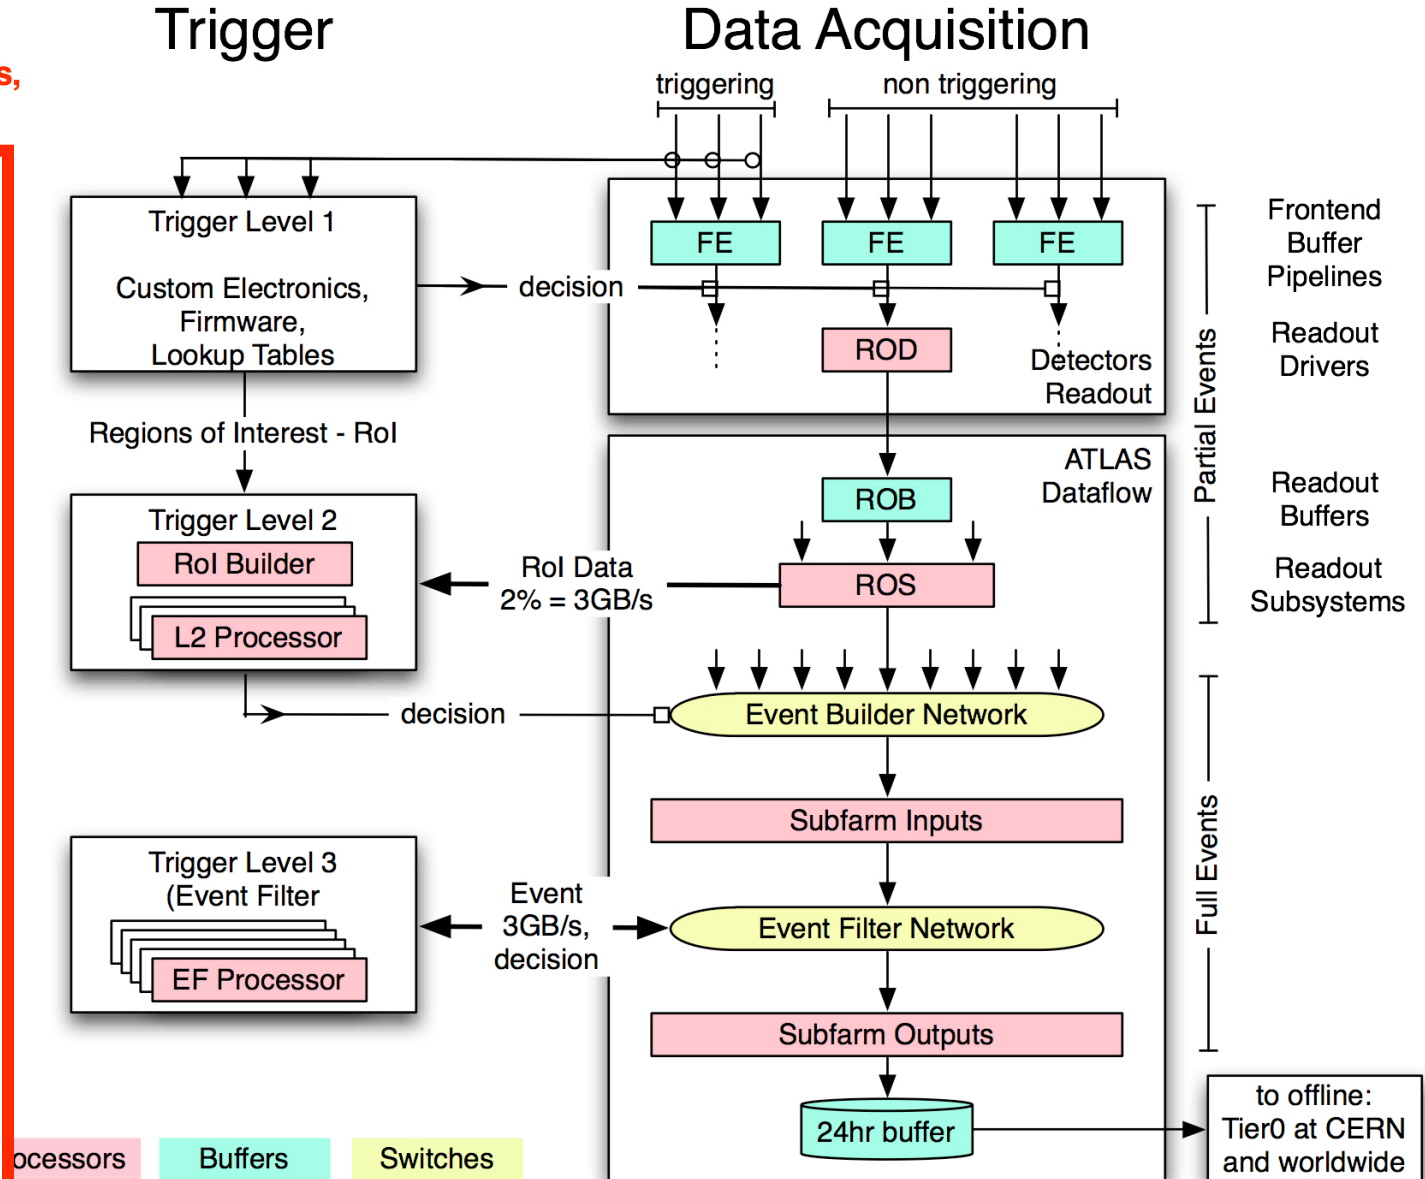

# Next-future planning

- ◆ FDR - Full Dress Rehearsal
- ◆ 2 periods with increasing amount of data
- ◆ Co-ordinator: Dave Charlton
  - ◆ FDR-1: week of 4 Feb  
(mainly  $10^{31}$ , 4 physics streams + express + ID calib)
  - ◆ FDR-2: ~ week of 5 May (mainly  $10^{32}$ )
- ◆ TR -TDAQ Technical Runs
  - ◆ Next: week of 4 Feb, i.e. in parallel to FDR-1, share SFOs
- ◆ Mx - integration/cosmics milestones
  - ◆ M6: week of 3 March
- ◆ Px - commissioning runs
  - ◆ P3: week of 25 Feb

# Mx scope

Rates,
