

ATLAS Computing @ RZG and MPP

Status

Stefan Kluth, 21.04.08

New hardware at RZG 2008

- CPU
 - 4 IBM BladeCenter, 14 HS21 dual quad core Xeon 5345 2,33 GHz, 16 GB RAM
 - in service mid-May (power limitations)
- Disk (ca. 250 TB netto)
 - 14 Intel SSR212MC2 servers + JBOD (12+16 750 GB SATA disks), 4 GB RAM, 2 Xeon 5310, hardware RAID, 10 GbE LAN
 - in production!

Status of LCG/glite@RZG

- CE
 - ok, but still on SL3
 - install as virtual servers this week on new hw
- SE
 - separate monbox and new SE
 - install as virtual servers this week on new hw
 - new SE will support SRM 2.2
- Downtime for grid jobs tommorrow

ATLAS Production

- ATLAS sw installation working
 - python configuration via “login script”
 - accepted as bug by Allessandro d.S.
 - 14.x.y needs gcc-3.4.6 (pacman cache?)
- current production works w/o SRM
 - lexor with 12.x.y releases
 - panda with 13.x.y (use LRZ SE)
- todo: support SRM

Grid environment at RZG

- Use grid-ui
 - interactive or “ssh grid-ui <command>”
- Submit jobs “on grid”
 - edg-job-submit
 - `ganga` on grid-ui!
- Source script (site-specific)
 - not the one from CERN! Please!
 - available for debugging at RZG

Data/job management

- Data registered “on grid” preferred
 - produce dpds/ntuples “on grid”, store output using LRZ or RZG SE
- Local “root analysis”
 - use LFC to locate files, open with “dcap://”
- Can use LRZ dCache (and vice versa)
 - use LRZ and RZG for jobs “on grid”!
