

Mission Planning at the German Space Operations Center IMPRS-EPP YSW Ringberg 2012

Knowledge for Tomorrow

Overview

- Part One: The interesting part
- Part Two: The *very* interesting part

The DLR

- German Aerospace Center (**D**eutsches Zentrum für **L**uft- und **R**aumfahrt)
- Research Institution
- Space Agency
- Project Management Agency

- Research Areas:
 - Aeronautics
 - Space Research and Technology
 - Transport
 - Energy
 - Space Administration

Locations and Employees

7000 employees across
32 institutes and facilities at
■ 16 sites.

Offices in Brussels,
Paris, Washington and Singapore.

DLR Institutes

- German Remote Sensing Data Center (DFD)
 - DLR Earth Observation Center
 - DLR Institute of Aerodynamics and Flow Technology
 - DLR Institute for Aeroelasticity
 - DLR Institute of Propulsion Technology
 - DLR Institute of Structures and Design
 - DLR Institute of Vehicle Concepts
 - DLR Institute of Composite Structures and Adaptive Systems
 - DLR Institute of Flight Guidance
 - DLR Institute of Air Transport and Airport Research
 - DLR Institute of Flight Systems
 - DLR Microwaves and Radar Institute
 - DLR Institute of Communications and Navigation
 - DLR Institute of Aerospace Medicine
 - DLR Institute of Material Physics in Space
 - DLR Remote Sensing Technology Institute
 - DLR Institute of Atmospheric Physics
 - DLR Institute of Planetary Research
 - DLR Institute of Space Propulsion
 - DLR Institute of Space Systems
 - DLR Institute of Robotics and Mechatronics
 - DLR Institute of Solar Research
 - DLR Institute of Technical Physics
 - DLR Institute of Technical Thermodynamics
 - DLR Institute of Combustion Technology
 - DLR Institute of Transport Research
 - DLR Institute of Transportation Systems
 - DLR Institute of Materials Research
 - DLR Design Organisation
 - DLR Flight Experiments
 - DLR Institute of Air Transportation Systems
 - Space Operations and Astronaut Training
 - DLR Simulations and Software Technology
- * blue = space operations institutes

DLR Site Oberpfaffenhofen

Employees: Approx. 1600

Size of site: 245 000 m²

Research institutes and facilities:

- Microwaves and Radar Institute
- Institute of Communications and Navigation
- Institute of Atmospheric Physics
- Remote Sensing Technology Institute
- Institute of Robotics and Mechatronics
- German Remote Sensing Data Center
- [Space Operations and Astronaut Training \(incl. German Space Operations Center\)](#)
- Galileo Control Center
- Flight Experiments

Starting in Space Operations

Can you guess the Abbreviation?

HEP/ATLAS

Space operations

LL

Leading Log

Left-Looking

IOV

Interval of Validity

In-Orbit Verification

CAL

Calorimeter

Calibration

MCS

Monte Carlo Simulation

Monitoring & Control System

MT

Transverse Mass

Magnetic Torquer

MET

Missing Transverse Energy

Mission Elapsed Time

First: The Mission TerraSAR-X and TanDEM-X

TerraSAR-X Technical Data

Launch:	15 June 2007 Baikonour
Weight, dimensions:	1023 kg, 5 x 2,4 m
Orbit altitude:	514 km
Orbit inclination:	97,44°
Reference orbit:	11 day cycle
X-Band frequency:	9.65 GHz
bandwidth:	max. 300 MHz
Length of antenna:	4.8 m
Incidence angle:	20° -55° (rightlooking)
Best resolution	High Resolution Spotlight 1m
Largest coverage	Scan SAR 120 km swath width
Polarisation:	HH,VH,HV,VV
Mission duration:	> 5 Jahre

Strip Map

Scan SAR

Spot Light

SAR Payload

Active Radar: Satellite transmits radar pulses, echo of earth surface is received & stored.

Synthetic Aperture: Improves resolution by continuously sampling the target during motion of the physical antenna.

TerraSAR-X resolution (down to 1m) comparable to physical antenna of 15 km length.

Strip Map

Scan SAR

Spot Light

Montserrat Volcano

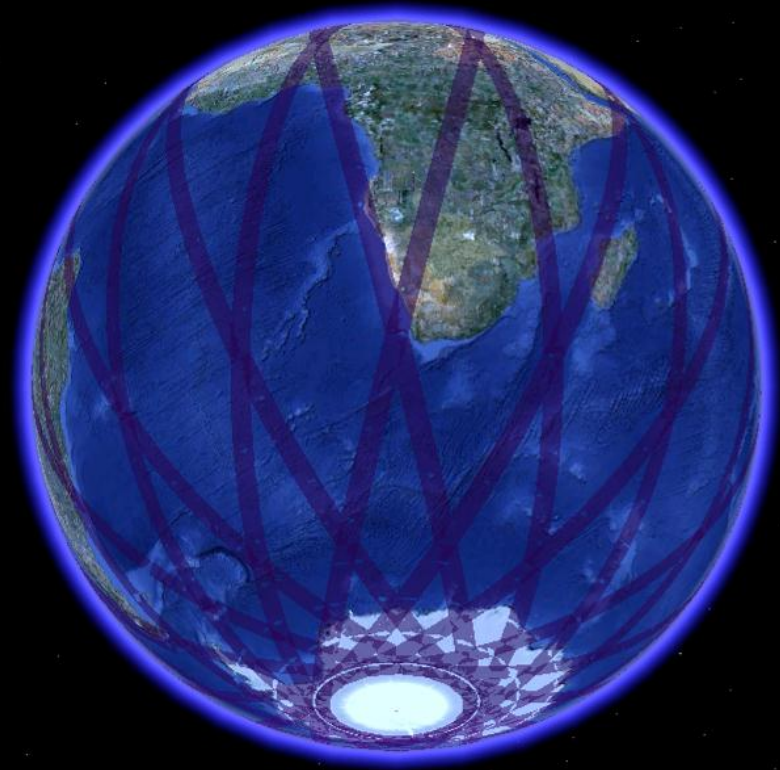

9. Oct. 2007
Eruption: 29 July 2008
1. Aug. 2008
12. Aug. 2008

Salar de Uyuni, the largest salt flats in the world next to the Atacama Desert (December 2010)

Second: The Planning

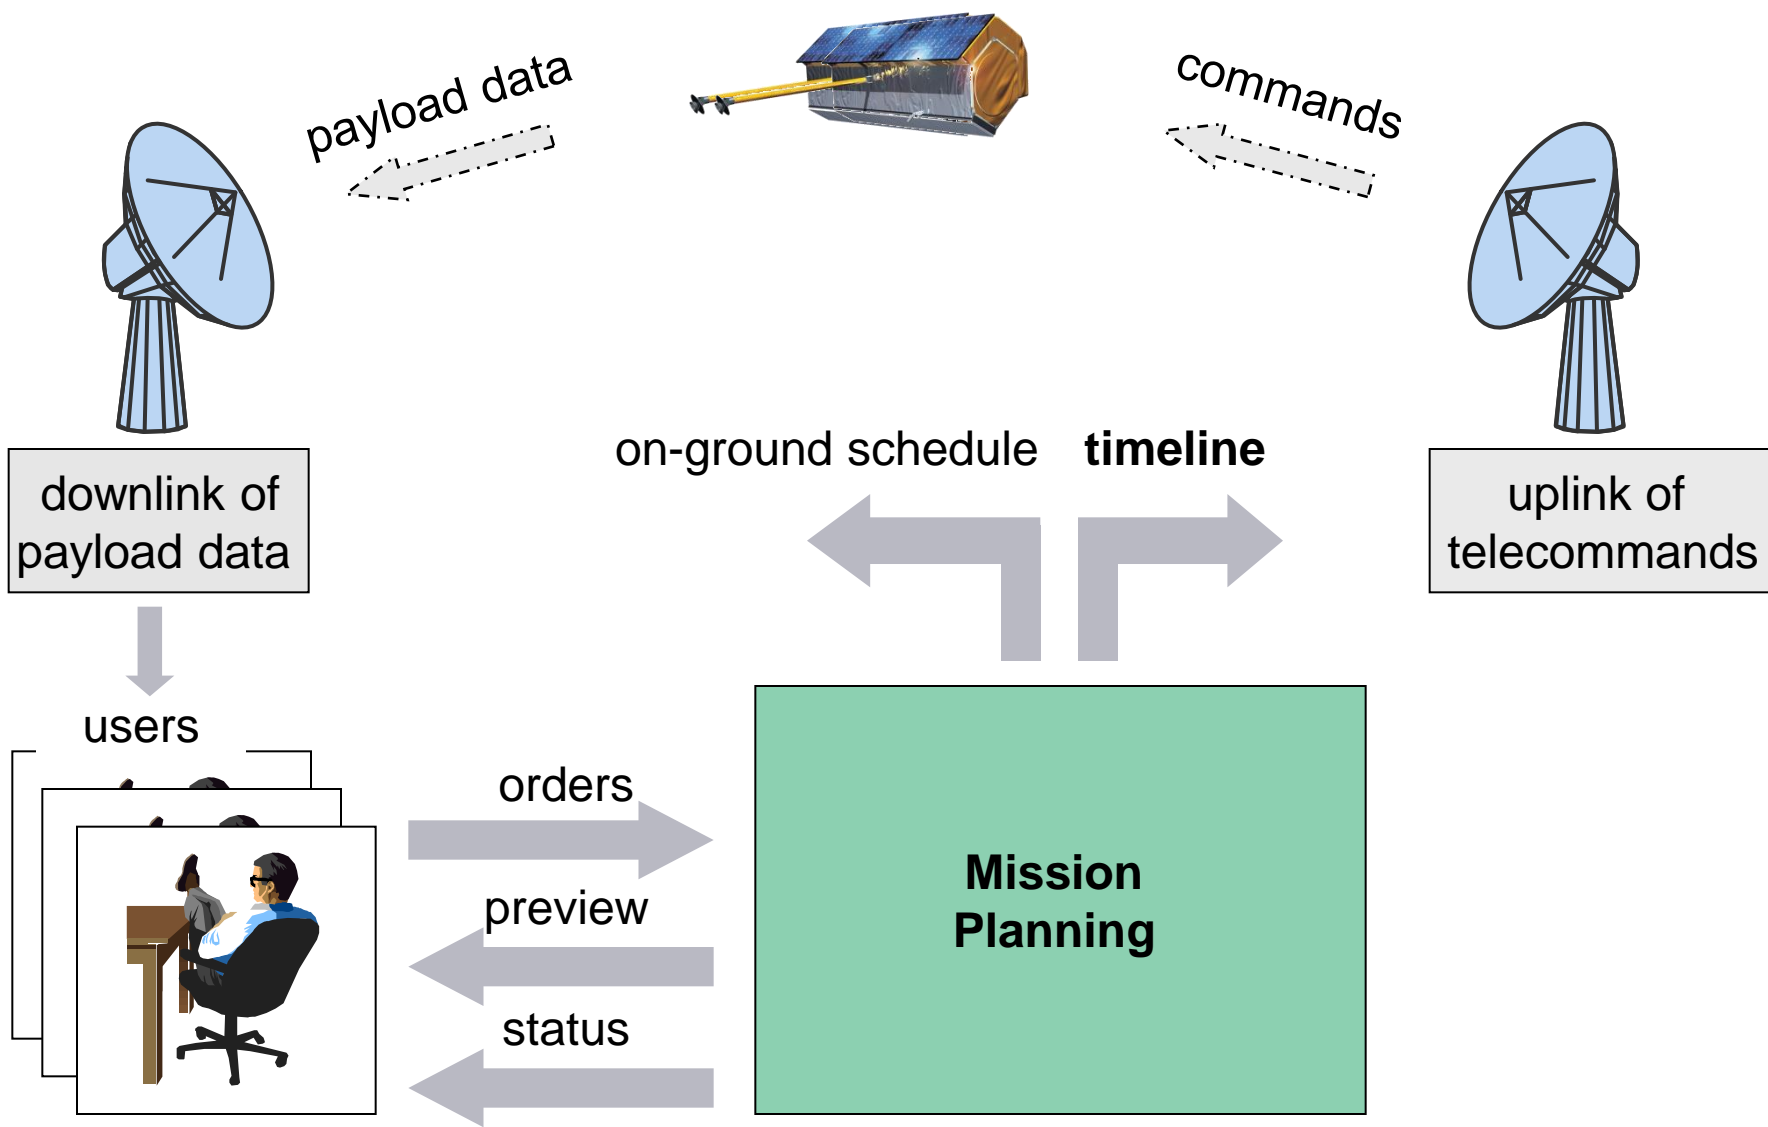

Payload Mission Planning means to ...

- ... organize usage of space craft resources to achieve mission goals
- ... ensure that technical boundary conditions of space craft and ground facilities are respected
- ... resolve conflicts in between different user groups

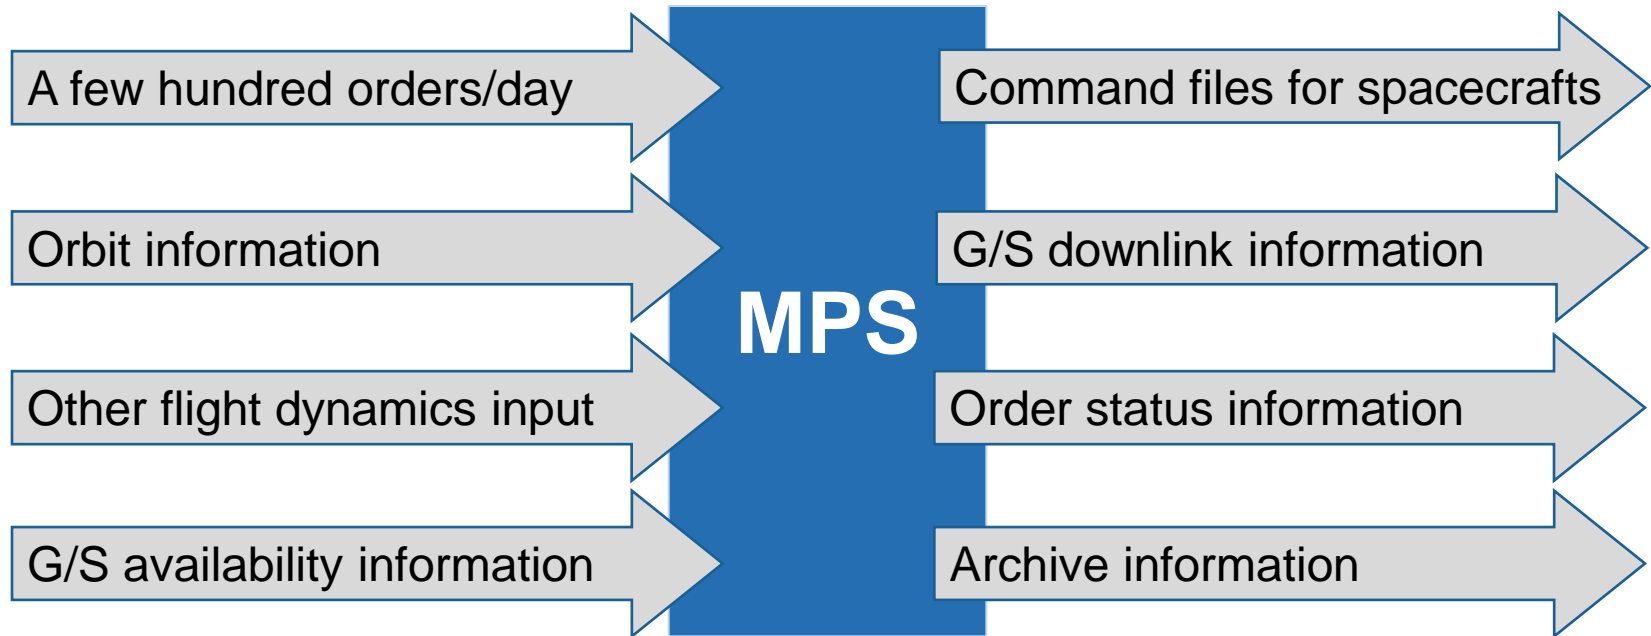

The principal output of Mission Planning is a timeline.

Mission Planning System (MPS)

MPS ...

- ... distributes 2 missions to 2 spacecrafts and 2 groundstation networks
- ... is fully automated
- ... contains safety additions for close formation flight

MPS Responsibilities

Timeline must...

- be conflict free
- respect all constraints and limitations, e.g.
 - memory size
 - battery power
 - heat load, ...
- contain all auxiliary activities that are payload-related, e.g.
 - instrument activation level
 - data downlink
 - file/memory management tasks, ...

A few Numbers ...

- MPS is designed for a few hundred orders per day
- 180 different telecommands available
- Since the start of the TanDEM-X mission (August 2010)
 - 110k datatakes executed (~150 per day)
 - >1500 MPS uplink contacts
 - 30k data downlink contacts
 - 1.1M commands uplinked (~1500 per day)
 - >750k files delivered by MPS
- Current orbit number:
 - TerraSAR-X satellite: 29260
 - TanDEM-X satellite: 11530
- 4/3 of land surface covered by 3D datatakes for the global elevation model

Example TerraSAR-X/TanDEM-X Timeline (1 week)

My Tasks @ GSOC

- **Software Engineering** and Development:
 - Design,
 - Write,
 - Maintain mission planning software
- For the **TanDEM-X/TerraSAR-X MPS**:
 - Configuration management
 - Maintain documents
 - Coordinate our external interfaces across institutes and groundsegment-wide
- Participate in the Mission Operations Software Group
 - **Data Analysis support** for Offline Telemetry Data

Team, Career, Starting @ GSOC ...

Prerequisite: degree in physics, aerospace engineering, maths, informatics, chemistry, electrical engineering ...

- ✓ Variable and interesting work
- ✓ Possibility of taking over responsibility quite fast
- ✓ Young team
- ✓ Size of DLR allows for development, flexibility and change of job orientation
