
Report of the Electronics Division

Project Review 2012

Max-Planck-Institut für Physik
(Werner-Heisenberg-Institut)

Outline

- Projects in 2012
- Manpower
 - Distribution in 2012
 - Requests for 2013/14
- Status of some selected projects
 - Contribution of electronics division
 - Impressions in pictures
- Additional activities

Projects in 2012

- Main Projects

- ATLAS HEC front-end development (EA, EE)
- ATLAS HEC low voltage (EA, EE)
- ATLAS MDT electronics upgrade for sLHC (EE, EP)
- ATLAS MDT small tubes and chamber (EA, EP)
- MAGIC-I camera upgrade (EA, EE, EP)
- MAGIC sum trigger (EE, EP)

- Minor Projects

- ATLAS SCT (EP)
- Belle II (EP)
- CRESST (EA, EE, EP)
- CTA (EE)
- GERDA (EA)

Groups

EA: Elektronikanlagen

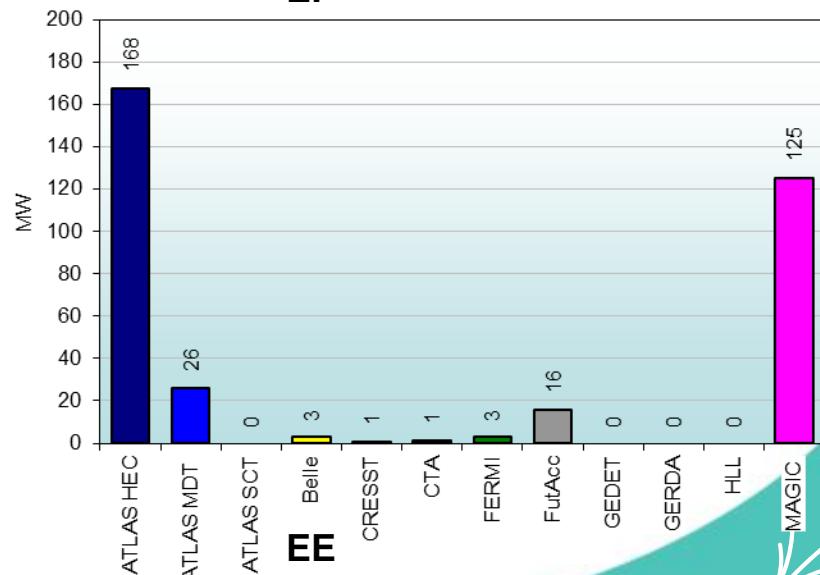

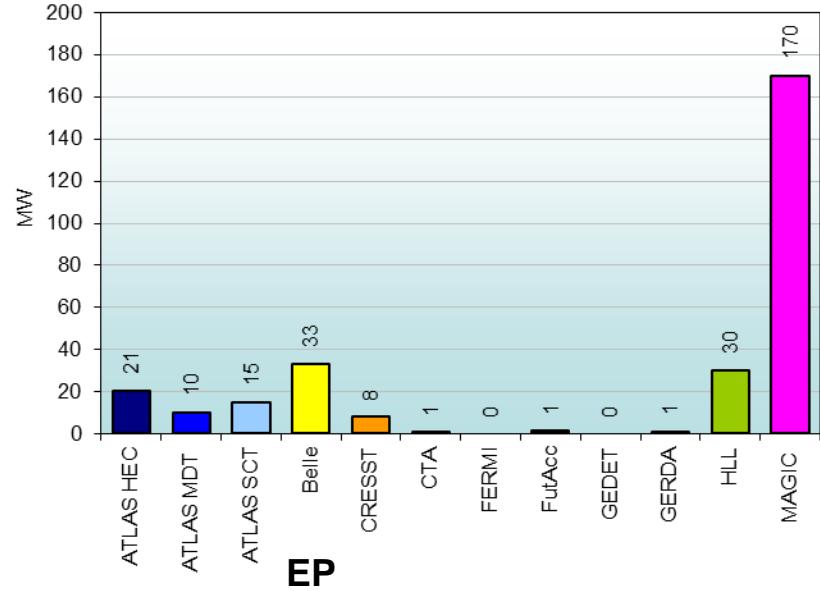

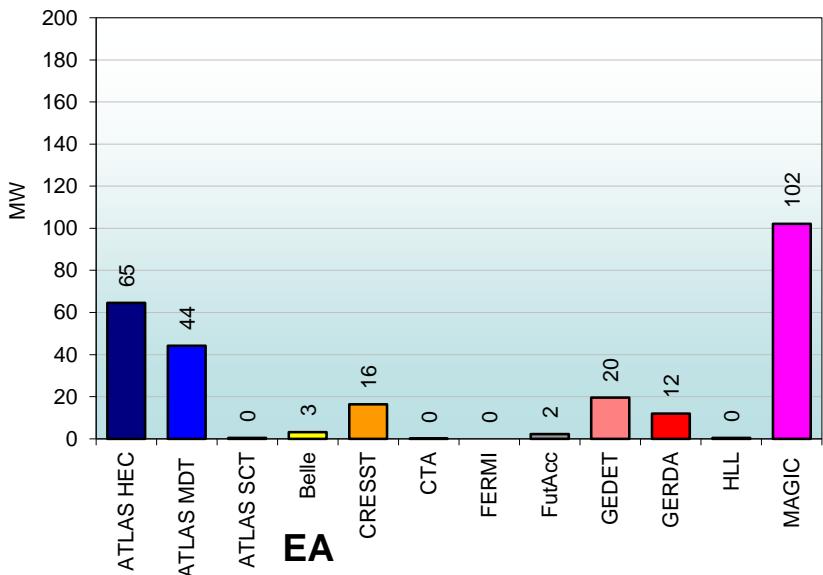

EE: Elektronikentwicklung

EP: Elektronikproduktion

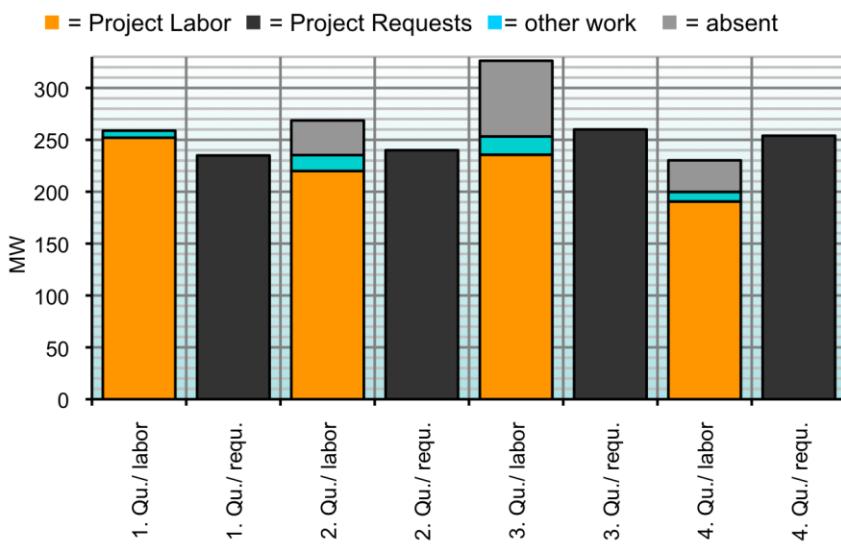

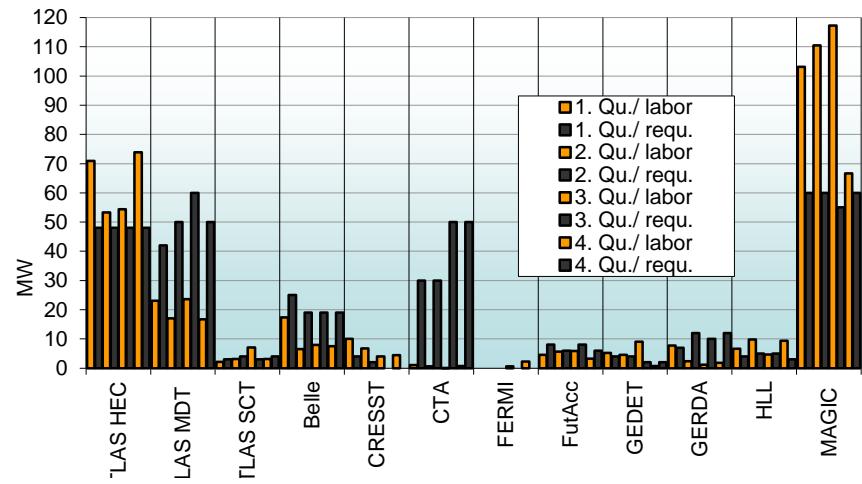

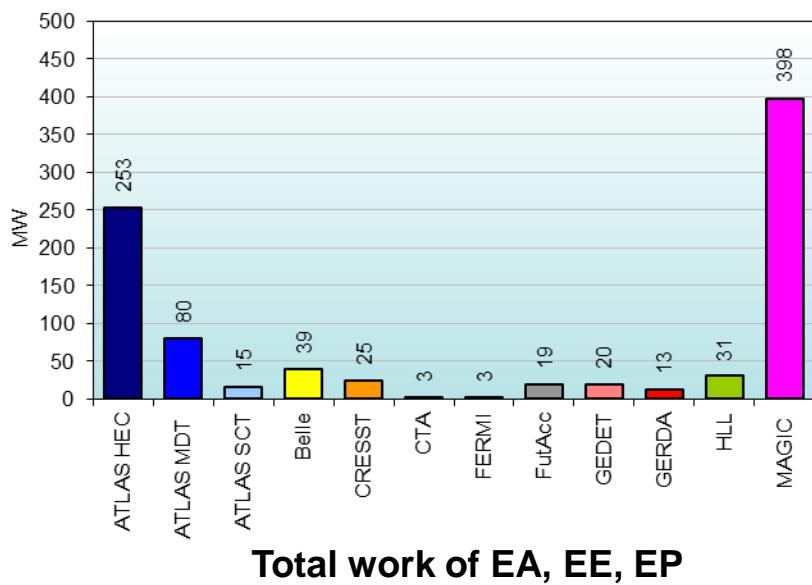

Work of Individual Groups in 2012

- January – November in MW (man-week)
- Assumption: 10 MW per quarter and person

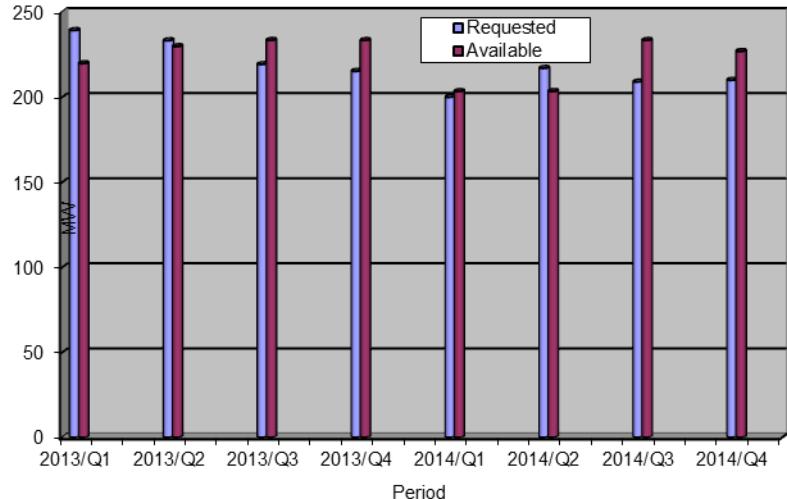

Comparison of Work & Request 2012

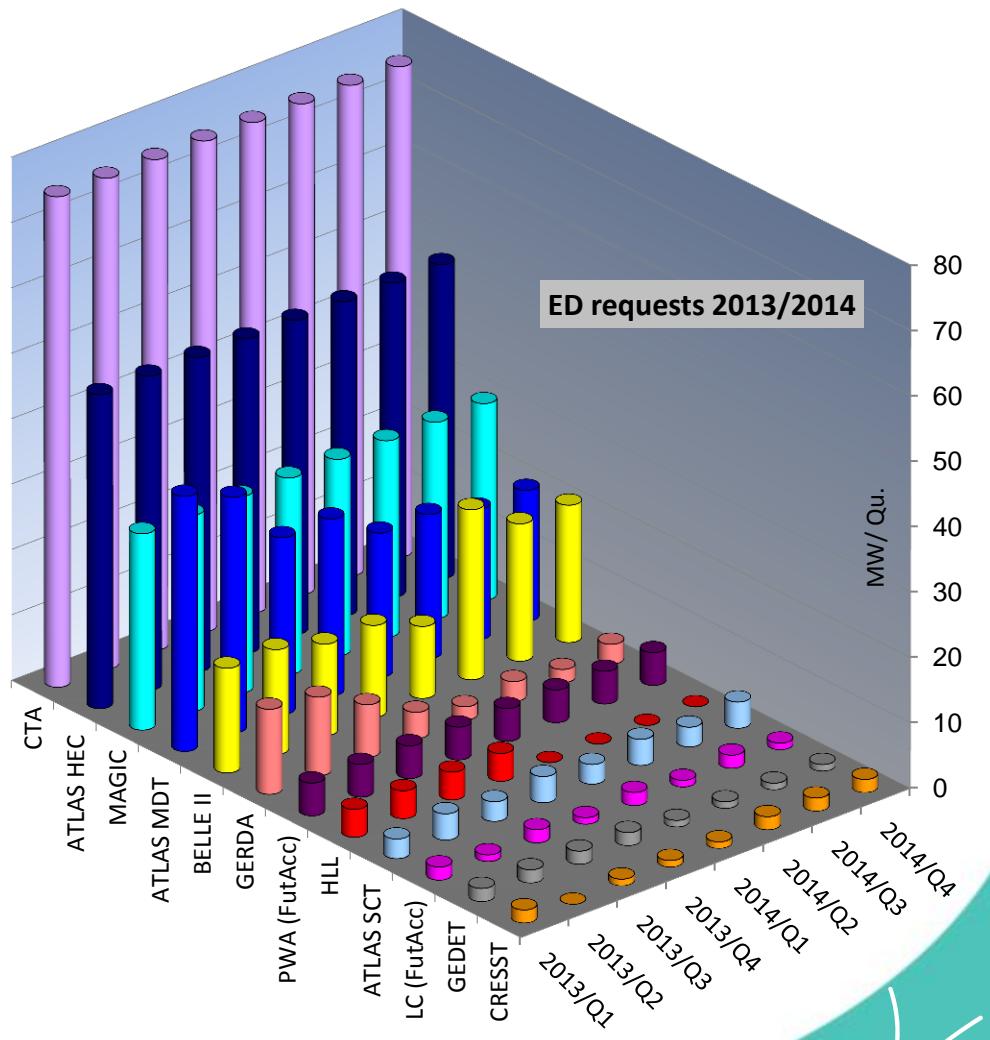

- January – November in MW (man-week)
- December is missing => lower bars for 4th quarter
- Shift of manpower from CTA to MAGIC

Requests for 2013/14

- Biggest projects in 2013/14:
 - MAGIC / CTA
 - ATLAS MDT
 - small chambers
 - new front-end electronics
 - ATLAS HEC
 - ASIC design & test
 - High-reliability LV system
 - Belle-II
- Demands are larger than available resources!

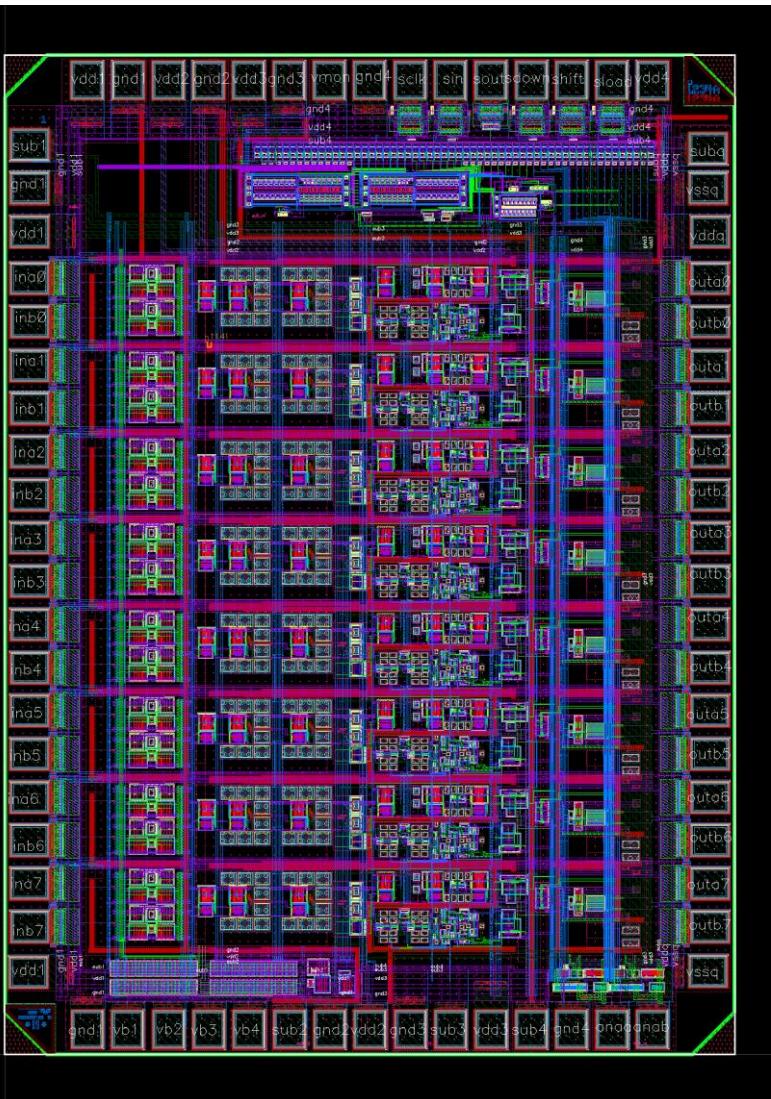

Requests for 2013/2014

| Project | 2013/Q1 | | | 2013/Q2 | | | 2013/Q3 | | | 2013/Q4 | | | 2014/Q1 | | | 2014/Q2 | | | 2014/Q3 | | | 2014/Q4 | | | |

ATLAS MDT: ASD2 V3 – New ASIC

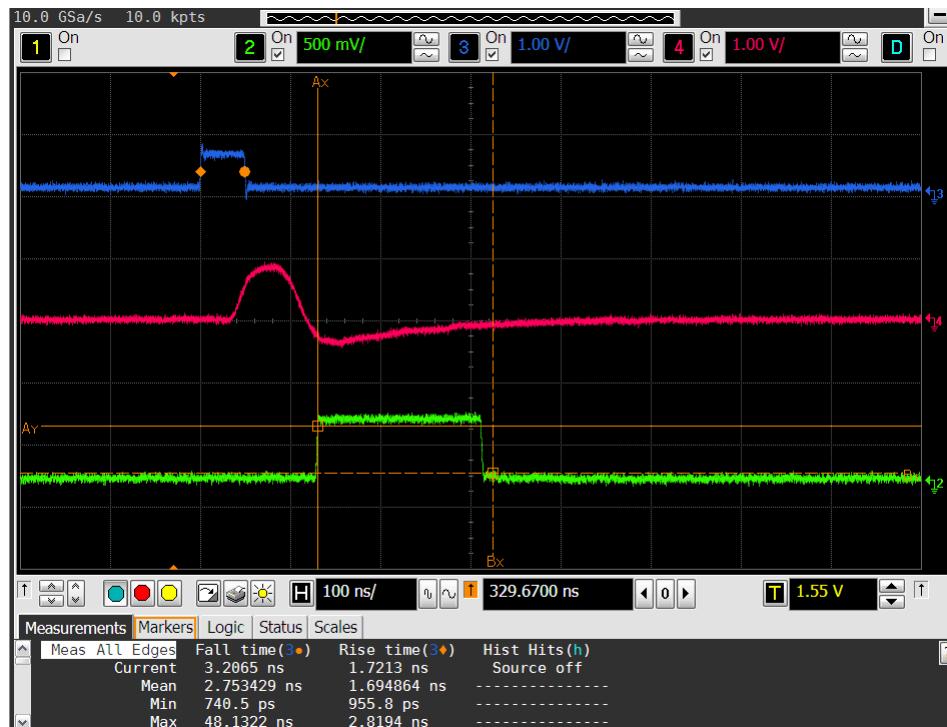

- IBM 130 nm rad-hard CMOS technology
 - 60 dB amplifier + digital processing
 - Third iteration designed at MPI
 - Fixed self-triggered oscillation issue
 - Number of channels raised from 4 to 8
 - Full function implemented except calibration capacitors
 - Design finished and submitted to MOSIS in May, 40 chips received in September
 - 4 chips bonded and tested: All of them are basically working!
 - Detailed characterization started and ongoing.

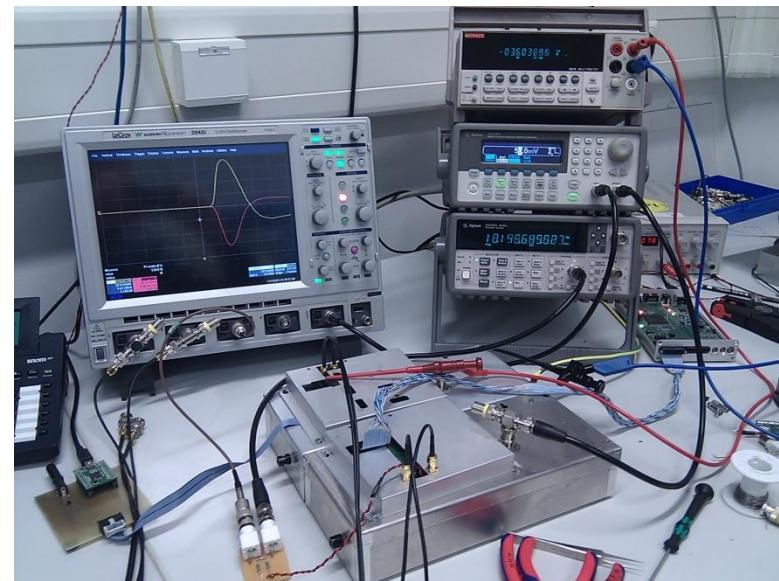

Amplifier-Shaper-Discriminator: Chip Layout

ATLAS MDT: ASD2 V3 – Testing

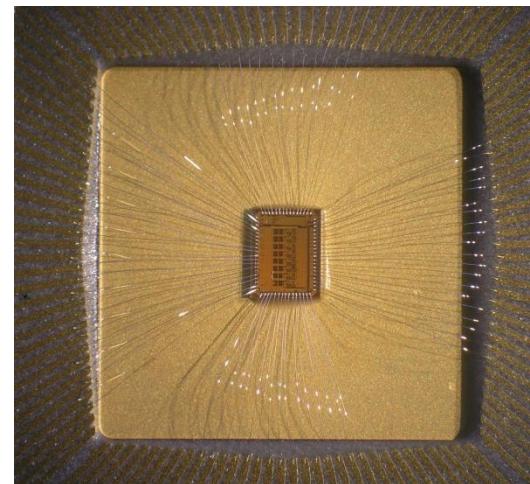

- Digital interface fully working
- Analogue monitor signal reasonable
- Digital circuit in principle working:
ToT mode and ADC mode

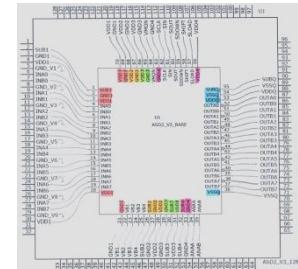

Pulse response: analogue (red), digital (green)

Setup with shielded ASD2 V3 test board

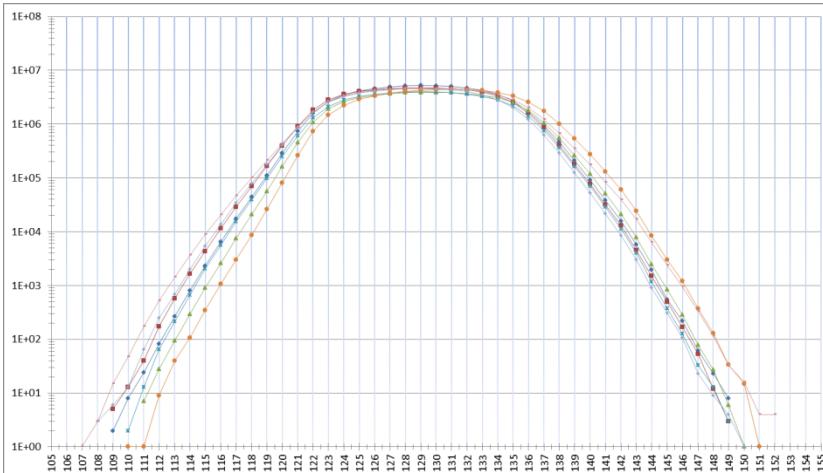

Bonded die in housing

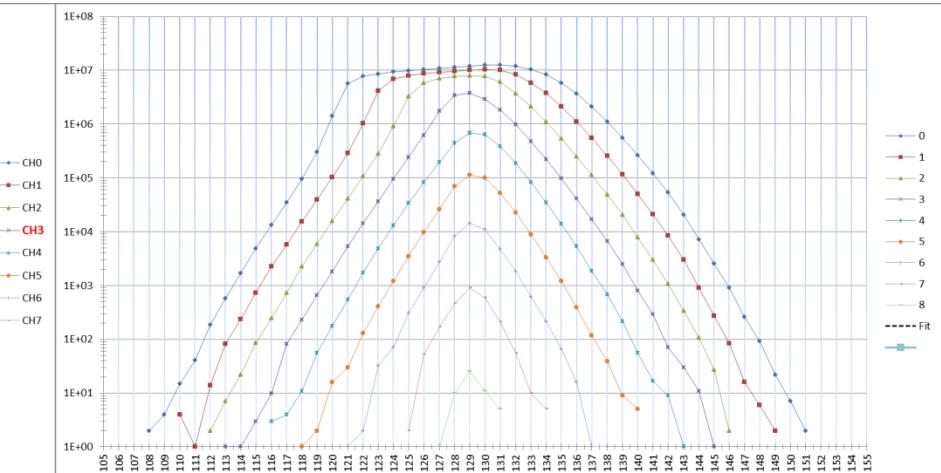

Bonding plan

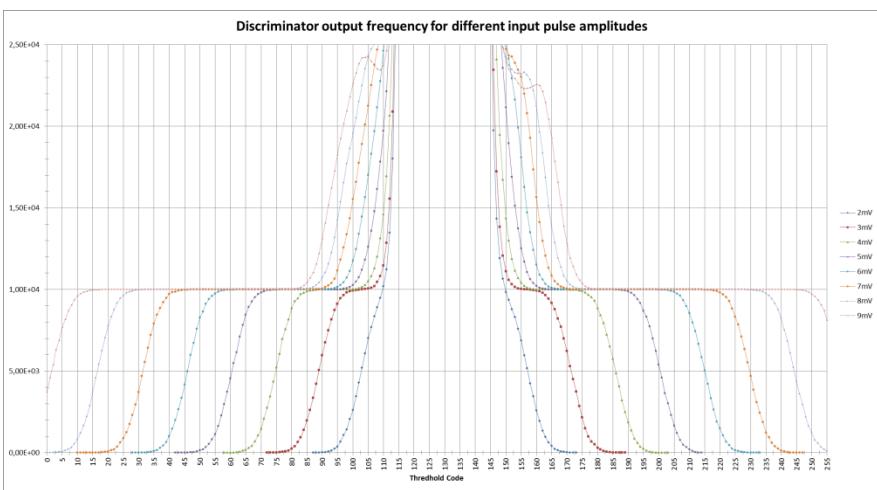

ATLAS MDT: ASD2 V3 – Measurement Results

Uniformity of threshold among channels

Scan over hysteresis values

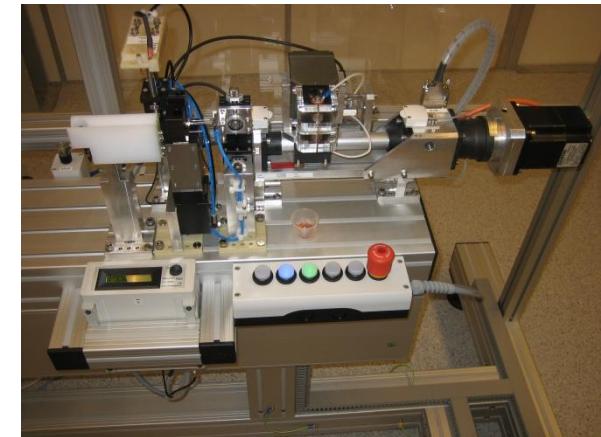

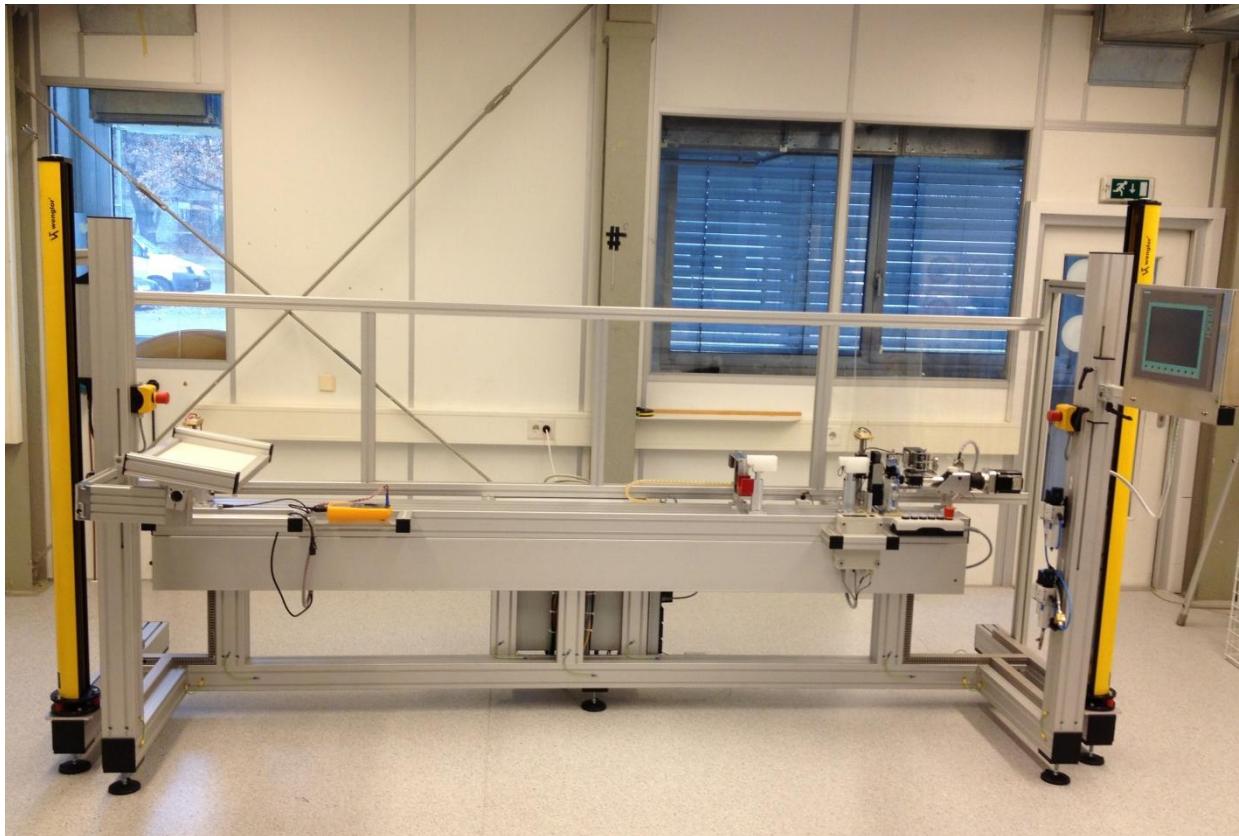

Noise rate against different threshold settings

- Uniformity among channels OK
- Good linearity of threshold and hysteresis values
- Some asymmetry around center
- Quantitative effects to be understood
 - ⇒ Cross-check with simulation
 - ⇒ Investigation ongoing

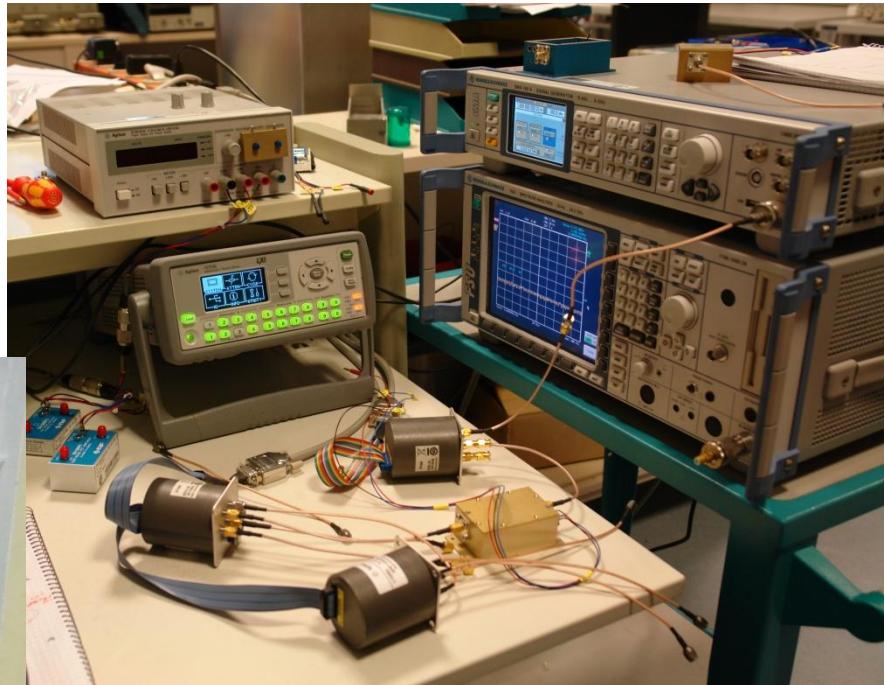

ATLAS MDT: Small Tubes (ϕ 15 mm)

- Semi-automatic machine for wire-tensioning in drive-in phase
 - 15 mm tubes up to 2.5 m long
 - Wire tension 100 .. 1000 g +/- 2 g

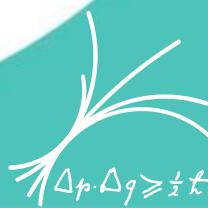

ATLAS HEC: Measurement Setup

- Mobile setup for radiation tests
 - 62 channels => 31 devices
 - S-parameter measurement
 - Radiation test 11th to 16th Dec.
 - Used for warm and cold

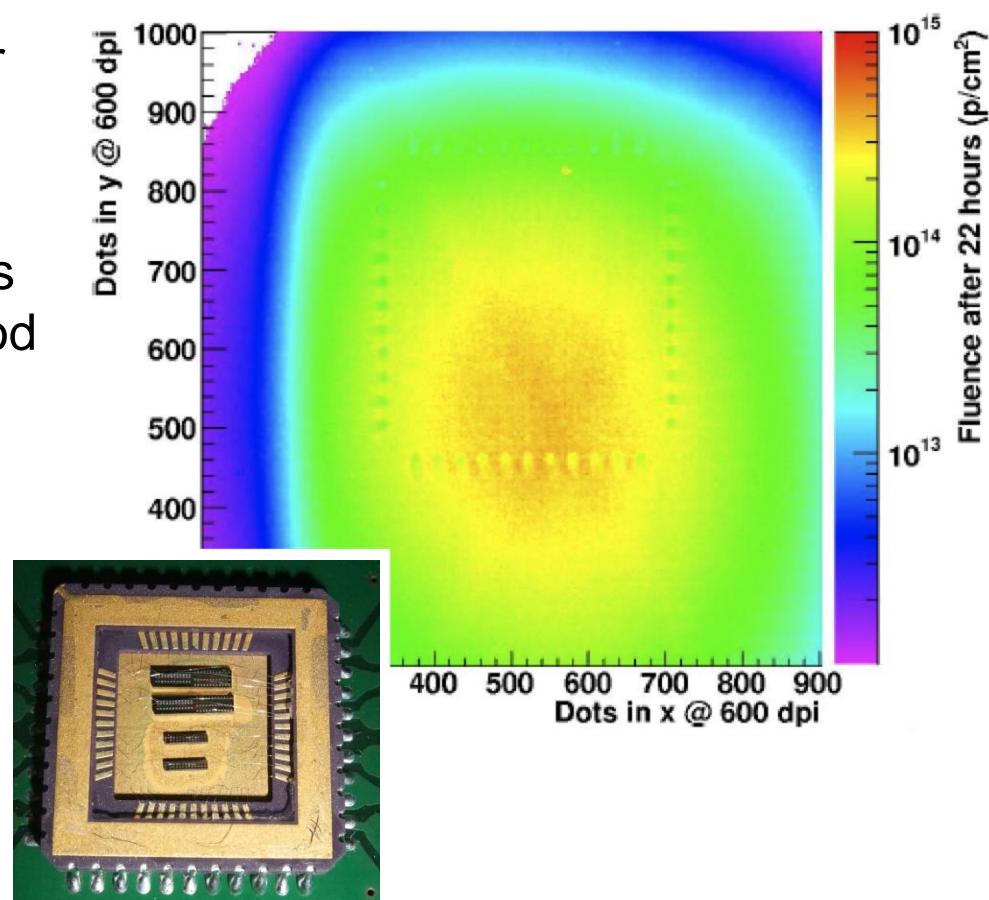

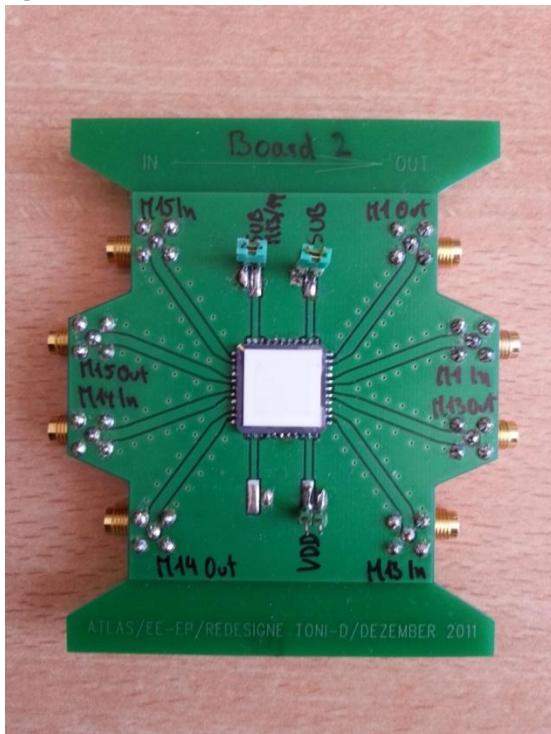

- Noise measurement setup
 - Low, middle and high frequency range
 - Software development for automatic measurement ongoing

ATLAS HEC – Radiation Testing

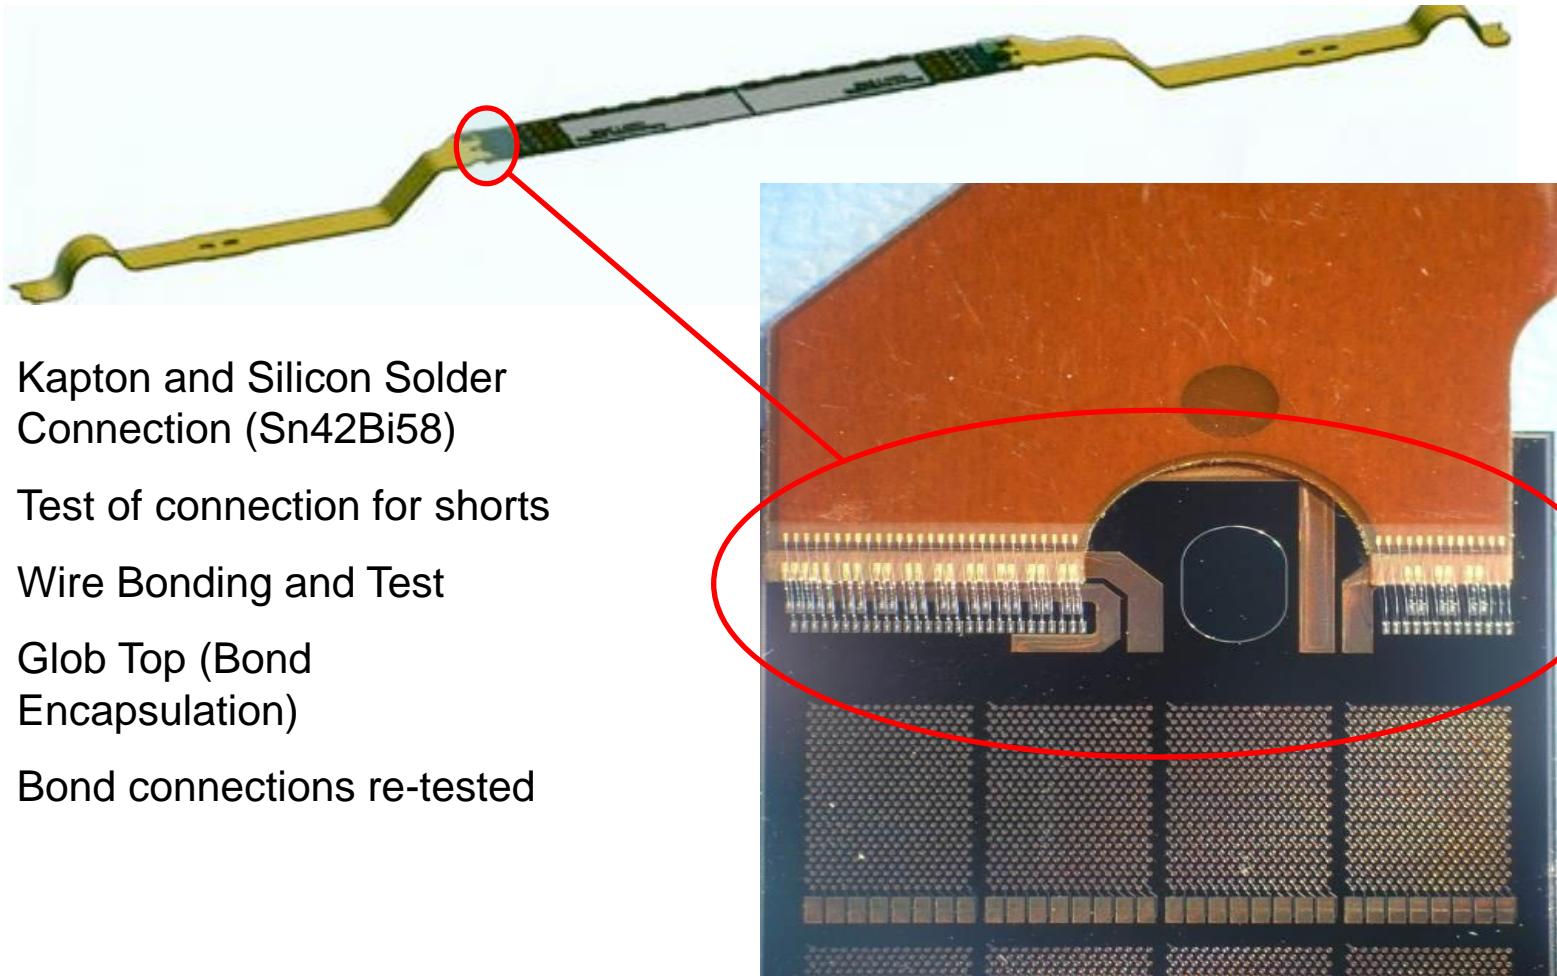

- Second Test Chip (IHP 250nm SiGe) for new cold pre-amplifier radiation testing and parameter extraction
- Detailed radiation and cold tests of current BB96 amp – very good models

- Digital components (PAL16R8, PAL16L8) for rad-hard low voltage supply

- Feasibility studies / Fabrication techniques for the Belle Detector Barrel done by EP Department

- Kapton and Silicon Solder Connection (Sn42Bi58)
- Test of connection for shorts
- Wire Bonding and Test
- Glob Top (Bond Encapsulation)
- Bond connections re-tested

MAGIC – Camera Upgrade Preparation

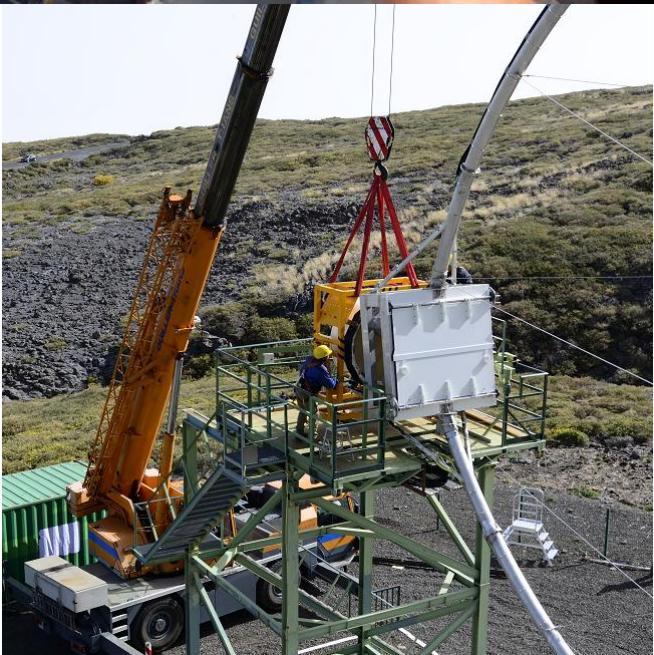

- Camera Verification Testing, Readiness Review
- Planning, Organization, and Installation of the MAGIC I Upgrade Camera (Major involvement of the EA Group)

MAGIC – Camera Upgrade Implementation

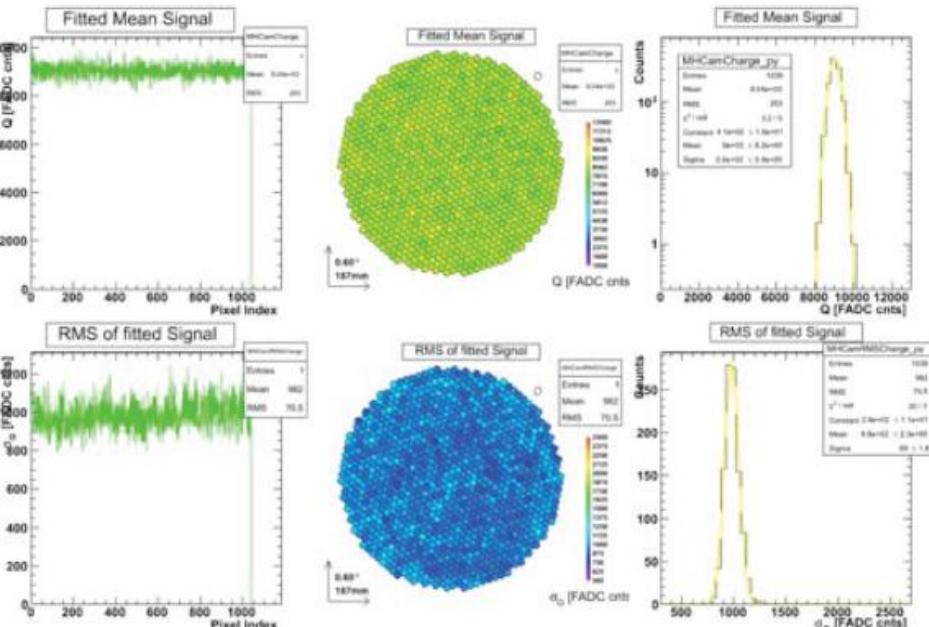

- Removal of old M1 Camera and Cabling
- Installation of new Upgrade Camera
- Up to 8 Technicians and Engineers from ED in June/July @ La Palma

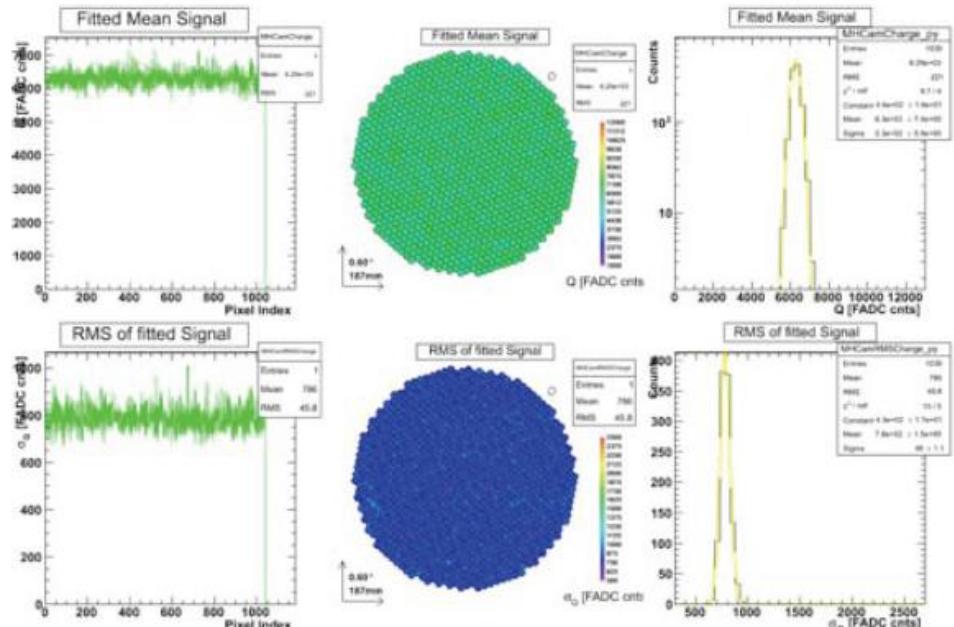

MAGIC – Camera Upgrade Results

- Concurrent Refurbishing of M2 Camera
- After commissioning, all 2078 channels in the two cameras are operational(!)

MAGIC-I

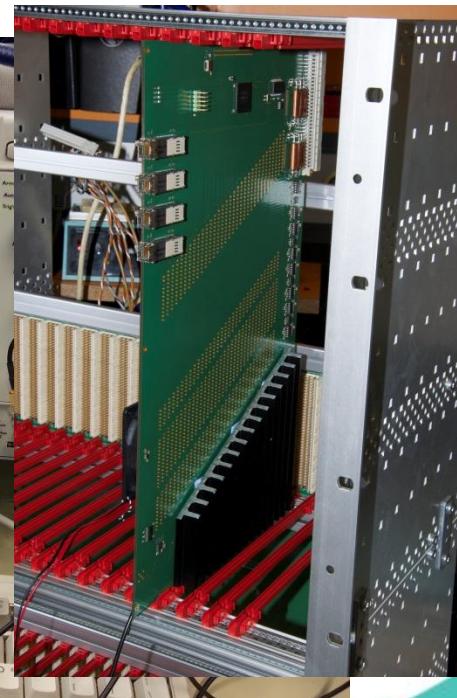

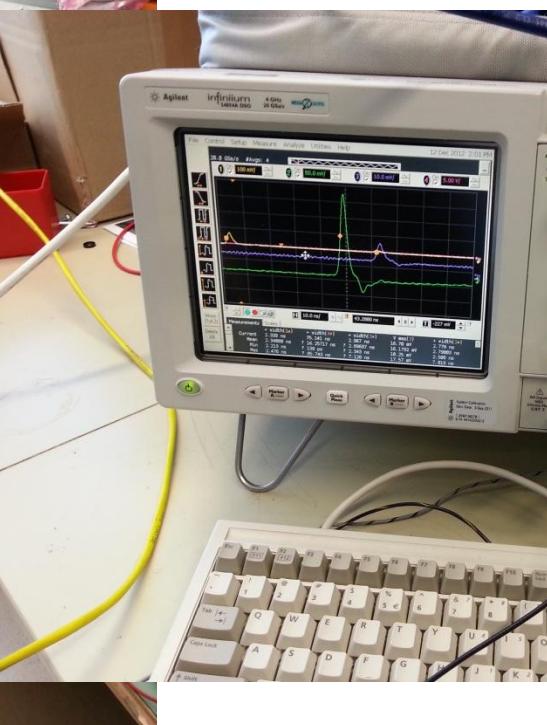

MAGIC-II

MAGIC – Sum Trigger II

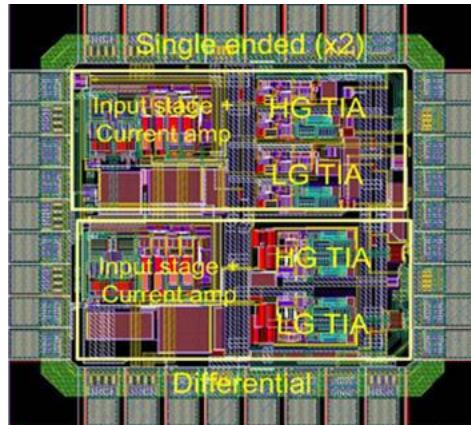

- Noise reduction scheme has potential to improve MAGIC trigger performance
- Electronic delay, amplitude, and sum of over 1k channels
- Hardware and resource intensive

CTA – Design Investigation

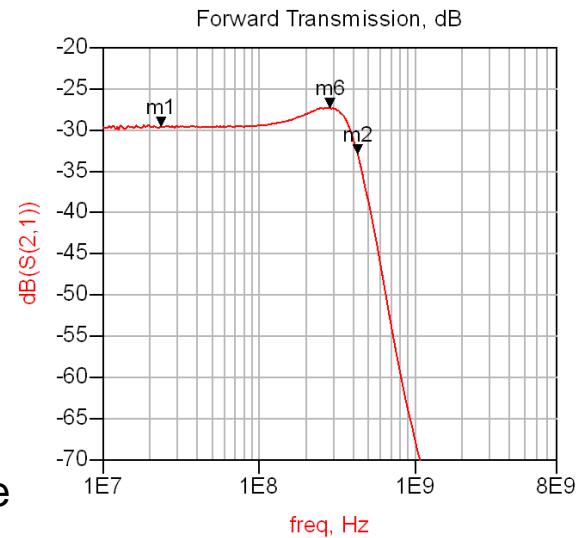

- S-Parameter Characterization of PACTA Preamplifier Chip (Designed by UABarcelona)

m6
freq=282.8MHz
dB(S(2,1))=-27.313
Max

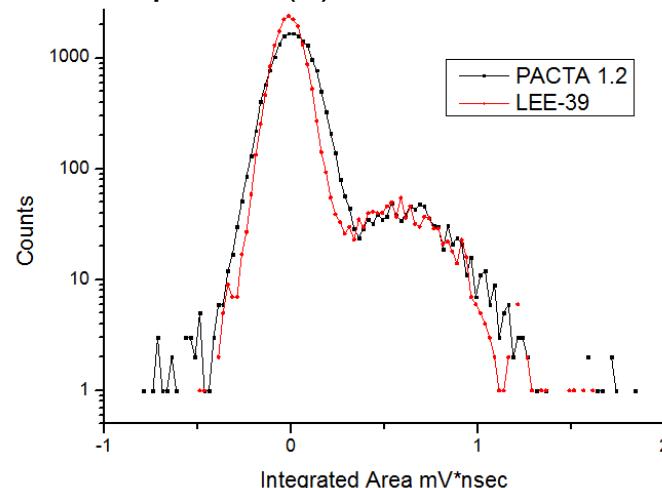

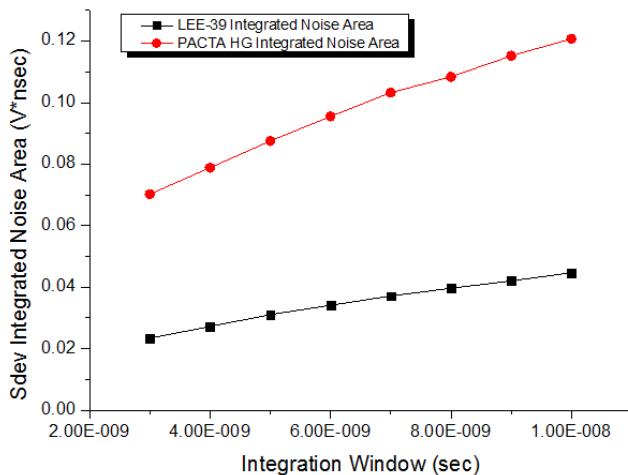

m1
freq=23.46MHz
dB(S(2,1))=-29.602

m2
freq=428.3MHz
dB(S(2,1))=-32.945

- Comparison between OTS and ASIC Preamplifier Performance

- Integrated Noise (R), Single Photoelectron Spectra (L)

Miscellaneous

- Support of Public Outreach Activities
 - Open House Day
 - Group Tours
 - Foyer Exhibits including the Cloud Chamber
- Class Instruction for the MAGIC Hardware School
- Supervision of Internships

Electronics Division

- Conclusion:
- A lot was going on in 2012
- Plenty to do in 2013/2014
- Thanks for your attention!
