

# **Workshop on AGN and Related and Fundamental Physics in HE Gamma Astronomy**

Monday, 31 March 2008 - Saturday, 5 April 2008

Jeris

## **Book of Abstracts**

# Contents

Welcome to Jeris . . . . .	1
Workshop Goals and Organization . . . . .	1
GLAST . . . . .	1
Blazars: what we really want to know and how can MAGIC help us? . . . . .	1
Kick-Off WG 1a –AGN Physics . . . . .	1
Kick-Off WG 2 –Lower Energies, Higher Sensitivities . . . . .	1
Kick-Off –Fundamental Physics . . . . .	1
Interpretation of Very Short Gamma-ray flares in blazars . . . . .	1
Timescales in TeV flares . . . . .	2
Timing Analysis in Blazar Flares . . . . .	2
Discussion: Blazar Flares . . . . .	2
SEDs of Gamma-ray Blazars . . . . .	2
The Synoptic Approach to Studying TeV Blazars . . . . .	2
BH mass determination in AGNs . . . . .	2
Blazar Monitoring Studies . . . . .	2
VHE Blazars and the EBL . . . . .	2
Very long-term observations of blazars-candidates for supermassive black hole binaries . . . . .	2
Discussion: Blazar Physics . . . . .	3
Ultra High Energy Cosmic Rays: first results from the Pierre Auger Observatory . . . . .	3
Discussion: New $\gamma$ -ray source classes . . . . .	3
Probing the EBL with VHE gamma-rays –status and perspectives . . . . .	3
VHE Blazars and the EBL . . . . .	3
Discussion: EBL . . . . .	3

LBLs and FSRQs: Low energies as a key to accessing new source classes - New activities to improve sensitivity below 150 GeV . . . . .	3
Gamma-ray Blazars with AGILE . . . . .	4
Hadronic emission models for blazars: an overview . . . . .	4
Photon breeding - a new particle acceleration mechanism - and the emission from relativistic jets . . . . .	4
BL Lac short time scale variability . . . . .	4
Discussion: Emission models and future observational strategies . . . . .	4
Dark Matter detectability prospects in the VHE region . . . . .	4
Quantum Gravity Theory and VHE LIV Probes . . . . .	4
Tau neutrino searches . . . . .	4
WG Discussions - parallel . . . . .	5
MAGIC DM Status . . . . .	5
Discussion: Future Fundamental-Physics Programs . . . . .	5
VERITAS observations and model simulations (Instruments) . . . . .	5
25 years of AGN radio variability data – what have we learned . . . . .	5
The Planck satellite as a tool for multifrequency studies of AGNs (Instruments) . . . . .	5
Discussion: Radio triggers for TeV observations . . . . .	5
Future optical support observations for MAGIC (Instruments) . . . . .	5
The Optical-TeV Connection . . . . .	6
Lobster Eye X-ray Monitor and Blazars (Instruments) . . . . .	6
A novel method of correlation analysis applied to optical, X-rays and gamma-rays from Mkn 421 . . . . .	6
VHE emission from M82 . . . . .	6
Summary WG 1a . . . . .	6
Summary WG 2 . . . . .	6
Discussion: Brainstorming Future Fundamental-Physics Programs . . . . .	6
Discussion: MAGIC Cycle-IV Extragalactic Program . . . . .	6
AGN physics with CTA . . . . .	7
Blazar observations with the INTEGRAL satellite . . . . .	7
Multimessenger studies with IceCube (Instruments) . . . . .	7

Discussion: Multi-messenger studies . . . . .	7
Workshop Summary . . . . .	7
A novel method of correlation analysis applied to optical, X-rays and gamma-rays from Mkn 421 . . . . .	7
The Planck satellite as a tool for multifrequency studies of AGNs . . . . .	7
The Optical-TeV Connection . . . . .	7
Ultra High Energy Cosmic Rays: first results from the Pierre Auger Observatory . . . . .	8
Photon breeding - a new particle acceleration mechanism - and the emission from relativistic jets . . . . .	8
Hadronic emission models for blazars: an overview . . . . .	8
Quantum Gravity Theory and VHE LIV Probes . . . . .	8
Timescales in TeV flares . . . . .	8
25 years of AGN radio variability data – what have we learned . . . . .	8
The Synoptic Approach to Studying TeV Blazars . . . . .	9
Interpretation of Very Short Gamma-ray flares in blazars . . . . .	9
VHE emission from M82 . . . . .	9
Timing Analysis of Blazar Flares . . . . .	9
SEDs of Gamma-ray Blazars . . . . .	9
Blazar Monitoring Studies . . . . .	10
Very long-term observations of blazars-candidates for supermassive black hole binaries . . . . .	10
VHE Blazars and the EBL . . . . .	10
LBLs and FSRQs: Low energies as a key to accessing new source classes - New activities to improve sensitivity below 150 GeV . . . . .	10
Gamma-ray Blazars with AGILE . . . . .	10
MAGIC DM Status . . . . .	10
Future optical support observations for MAGIC . . . . .	11
Blazar observations with the INTEGRAL satellite . . . . .	11
Multimessenger studies with IceCube . . . . .	11
DWARF . . . . .	11
Welcome by the Director of the Jeris Hotel . . . . .	11
Kick-Off WG 1b: Strategies, Interactions . . . . .	11

DWARF (instruments) . . . . .	12
The Swiss Camera Project . . . . .	12
Summary WG 1b . . . . .	12

## **Welcome to Jeris**

**1**

## **Workshop Goals and Organization**

**2**

## **GLAST**

**3**

## **Blazars: what we really want to know and how can MAGIC help us?**

**4**

## **Kick-Off WG 1a –AGN Physics**

**5**

## **Kick-Off WG 2 –Lower Energies, Higher Sensitivities**

**6**

## **Kick-Off –Fundamental Physics**

**Blazar Flares / 7**

## **Interpretation of Very Short Gamma-ray flares in blazars**

**Blazar Flares / 8**

## **Timescales in TeV flares**

**Blazar Flares / 9**

## **Timing Analysis in Blazar Flares**

**Blazar Flares / 10**

## **Discussion: Blazar Flares**

**Blazar Physics / 11**

## **SEDs of Gamma-ray Blazars**

**Blazar Physics / 12**

## **The Synoptic Approach to Studying TeV Blazars**

**Blazar Physics / 13**

## **BH mass determination in AGNs**

**Blazar Physics / 14**

## **Blazar Monitoring Studies**

15

## **VHE Blazars and the EBL**

**Blazar Physics / 16**

## **Very long-term observations of blazars-candidates for supermassive black hole binaries**

Blazar Physics / 17

### **Discussion: Blazar Physics**

Blazar Physics / 18

## **Ultra High Energy Cosmic Rays: first results from the Pierre Auger Observatory**

Blazar Physics / 19

### **Discussion: New $\gamma$ -ray source classes**

EBL / 20

## **Probing the EBL with VHE gamma-rays –status and perspectives**

EBL / 21

### **VHE Blazars and the EBL**

EBL / 22

### **Discussion: EBL**

EBL / 23

## **LBLs and FSRQs: Low energies as a key to accessing new source classes - New activities to improve sensitivity below 150 GeV**

EBL / 24

## **Gamma-ray Blazars with AGILE**

Modeling, Fundamental Physics I / 25

### **Hadronic emission models for blazars: an overview**

Modeling, Fundamental Physics I / 26

### **Photon breeding - a new particle acceleration mechanism - and the emission from relativistic jets**

Modeling, Fundamental Physics I / 27

### **BL Lac short time scale variability**

Modeling, Fundamental Physics I / 28

### **Discussion: Emission models and future observational strategies**

Modeling, Fundamental Physics I / 29

### **Dark Matter detectability prospects in the VHE region**

30

## **Quantum Gravity Theory and VHE LIV Probes**

WG Discussions, Fundamental Physics II / 31

### **Tau neutrino searches**

**WG Discussions, Fundamental Physics II / 32**

## **WG Discussions - parallel**

33

### **MAGIC DM Status**

34

### **Discussion: Future Fundamental-Physics Programs**

**WG Discussions, Fundamental Physics II / 35**

### **VERITAS observations and model simulations (Instruments)**

**Radio and Optical / Multiwavelength / 36**

### **25 years of AGN radio variability data – what have we learned**

**Radio and Optical / Multiwavelength / 37**

### **The Planck satellite as a tool for multifrequency studies of AGNs (Instruments)**

**Radio and Optical / Multiwavelength / 38**

### **Discussion: Radio triggers for TeV observations**

**Radio and Optical / Multiwavelength / 39**

### **Future optical support observations for MAGIC (Instruments)**

**Radio and Optical / Multiwavelength / 40**

## **The Optical-TeV Connection**

**Radio and Optical / Multiwavelength / 41**

## **Lobster Eye X-ray Monitor and Blazars (Instruments)**

## **A novel method of correlation analysis applied to optical, X-rays and gamma-rays from Mkn 421**

**Radio and Optical / Multiwavelength / 43**

## **VHE emission from M82**

**WG Summaries and MAGIC C-IV / 44**

## **Summary WG 1a**

**WG Summaries and MAGIC C-IV / 45**

## **Summary WG 2**

**WG Summaries and MAGIC C-IV / 46**

## **Discussion: Brainstorming Future Fundamental-Physics Programs**

**WG Summaries and MAGIC C-IV / 47**

## **Discussion: MAGIC Cycle-IV Extragalactic Program**

**Multi-messenger, Conclusions / 48**

## **AGN physics with CTA**

**Multi-messenger, Conclusions / 49**

## **Blazar observations with the INTEGRAL satellite**

**Multi-messenger, Conclusions / 50**

## **Multimessenger studies with IceCube (Instruments)**

**Multi-messenger, Conclusions / 51**

## **Discussion: Multi-messenger studies**

**Multi-messenger, Conclusions / 52**

## **Workshop Summary**

54

### **A novel method of correlation analysis applied to optical, X-rays and gamma-rays from Mkn 421**

**Author:** Dario Hrupec<sup>1</sup>

<sup>1</sup> *Rudjer Boskovic Institute*

55

### **The Planck satellite as a tool for multifrequency studies of AGNs**

**Author:** Anne Lähtenmäki<sup>1</sup>

<sup>1</sup> *Metsähovi Radio Observatory*

56

## **The Optical-TeV Connection**

57

## **Ultra High Energy Cosmic Rays: first results from the Pierre Auger Observatory**

**Author:** Gianni Navarra<sup>1</sup>

<sup>1</sup> *INFN - University Torino*

58

## **Photon breeding - a new particle acceleration mechanism - and the emission from relativistic jets**

**Author:** Juri Poutanen<sup>1</sup>

<sup>1</sup> *University of Oulu*

59

## **Hadronic emission models for blazars: an overview**

**Author:** Anita Reimer<sup>1</sup>

<sup>1</sup> *Stanford University*

60

## **Quantum Gravity Theory and VHE LIV Probes**

**Author:** Alexandre Sakharov<sup>None</sup>

61

## **Timescales in TeV flares**

**Author:** Joni Tammi<sup>1</sup>

<sup>1</sup> *University College Dublin*

62

## **25 years of AGN radio variability data – what have we learned**

**Author:** Merja Tornikoski<sup>1</sup>

<sup>1</sup> *Metsähovi Radio Observatory*

63

## **The Synoptic Approach to Studying TeV Blazars**

**Author:** Robert Wagner<sup>1</sup>

<sup>1</sup> *MPIP*

64

## **Interpretation of Very Short Gamma-ray flares in blazars**

65

## **VHE emission from M82**

**Author:** Massimo Persic<sup>1</sup>

<sup>1</sup> *INAF/INFN Trieste*

66

## **Timing Analysis of Blazar Flares**

**Author:** Daniel Kranich<sup>1</sup>

<sup>1</sup> *ETH Zurich*

67

## **SEDs of Gamma-ray Blazars**

**Author:** Stefan Wagner<sup>1</sup>

<sup>1</sup> *LSW*

68

## **Blazar Monitoring Studies**

**Author:** Konstancja Satalecka<sup>1</sup>

<sup>1</sup> *DESY*

69

## **Very long-term observations of blazars-candidates for supermassive black hole binaries**

**Author:** Rene Hudec<sup>1</sup>

<sup>1</sup> *Astronomical Inst. Ondrejo*

70

## **VHE Blazars and the EBL**

**Author:** Martin Raue<sup>1</sup>

<sup>1</sup> *MPIK*

71

## **LBLs and FSRQs: Low energies as a key to accessing new source classes - New activities to improve sensitivity below 150 GeV**

**Author:** Pratik Majumdar<sup>1</sup>

<sup>1</sup> *MPIP*

72

## **Gamma-ray Blazars with AGILE**

**Author:** Francesco Longo<sup>1</sup>

<sup>1</sup> *INFN Trieste*

73

## **MAGIC DM Status**

**Author:** Michele Doro<sup>1</sup>

<sup>1</sup> *University Padova*

74

## **Future optical support observations for MAGIC**

**Author:** Kari Nilsson<sup>1</sup>

<sup>1</sup> *Tuorla Observatory*

75

## **Blazar observations with the INTEGRAL satellite**

**Author:** Rene Hudec<sup>1</sup>

<sup>1</sup> *Astronomical Inst. Ondrejo*

76

## **Multimessenger studies with IceCube**

**Author:** Elis Bernardini<sup>1</sup>

<sup>1</sup> *DESY*

79

## **DWARF**

**Author:** Thomas Bretz<sup>1</sup>

<sup>1</sup> *University Würzburg*

80

## **Welcome by the Director of the Jeris Hotel**

81

## **Kick-Off WG 1b: Strategies, Interactions**

**Author:** Elina Lindfors<sup>1</sup>

<sup>1</sup> *Tuorla Observatory*

**Modeling, Fundamental Physics I / 82**

**DWARF (instruments)**

**Modeling, Fundamental Physics I / 83**

**The Swiss Camera Project**

**WG Summaries and MAGIC C-IV / 84**

**Summary WG 1b**
