

Introduction to the National Analysis Facility

Wolfgang Ehrenfeld – DESY
MPI Atlas Gruppentreffen
München, 17.11.2008

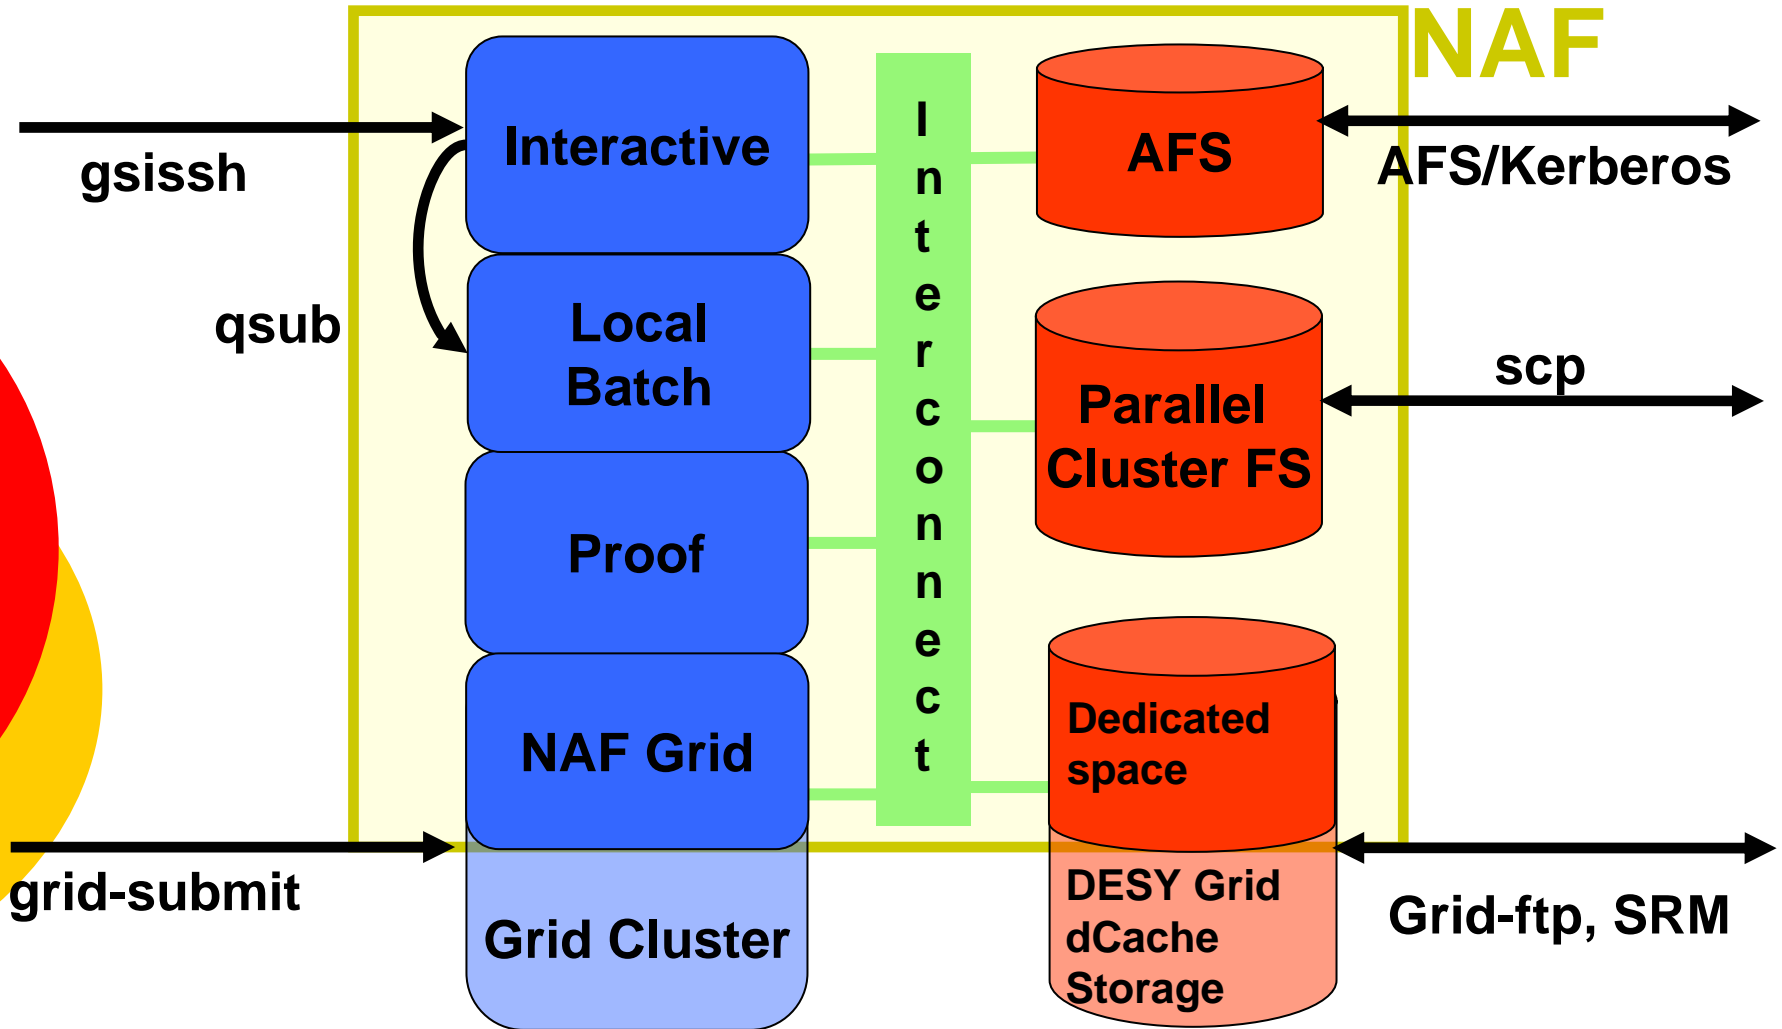

National Analysis Facility

- <http://naf.desy.de>
- The National Analysis Facility (NAF) is part of the Strategic Helmholtz Alliance (<http://terascale.de>) for German particle physics (ALTA, CMS, LHCb, ILC).
- It should provide additional computing resources for analysis to the German particle physics groups!
- Planned for a size of about 1.5 average Tier2, but with more emphasize on data.
- The NAF provides:
 - additional Grid resources
 - interactive resources

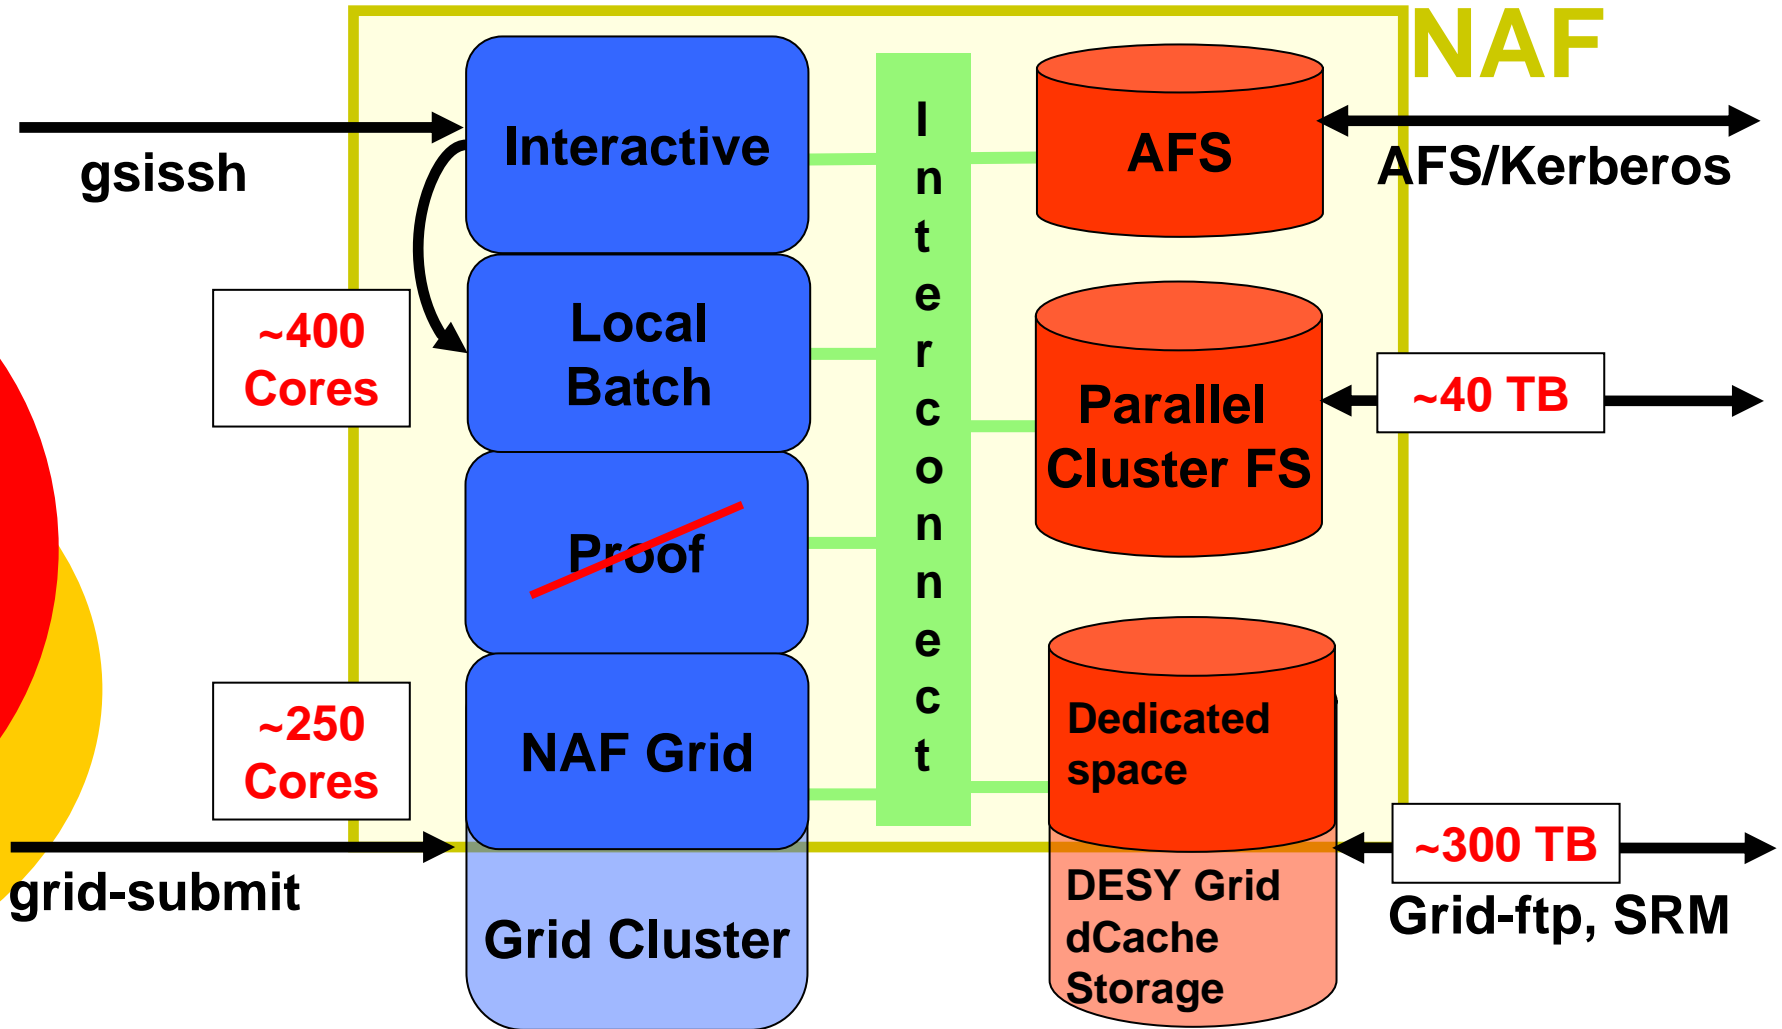

Infrastructure

Infrastructure – Extension I (ATLAS)

Infrastructure – Extension II

- The NAF prototype was funded by the Terascale alliance.

- For 2008/2009 the BMBF funded the NAF with 1.37 MEuro (LHC Anschubfinanzierung):
 - phase I (summer 2008): batch und dCache storage
 - phase II (winter 2008): batch
 - phase III (2009): ???
 - the experiments can influence the extension plans of the NAF and are waiting for experience from first data.

- For 2010/11 the NAF is funded but ~300 kEuro/year by the Terascale Alliance

Use Cases

- The interactive resources are designed for fast analysis.
- The setup should be flexible enough to adapt to our analysis needs. We need input from you!
- Lustre is a high performance file system with a very high IO rate and full support in the batch system. Ideal for fast ntuple analysis.
- Lustre should be the ideal storage for PROOF.
- Access to ATLAS data (collision/MC) is realised via the DESY T2 Storage Element, including dedicated (and permanent) space for ATLAS Germany users.
- Clearly, typical Grid applications should be run on the Grid.

Atlas Resources

○ **Grid:**

- worker nodes: 128 Cores
- privileged access using /atlas/de VOMS role
- Grid storage (dCache)

○ **Interactive:**

- 2 work group server
- worker nodes in batch system: 50% share
- AFS home and group space
- high IO rate file system (Lustre, scratch, 18 TB)
- Grid storage (dCache) for long term user storage and data import

Accessing the NAF

- **All authentication is done via Grid tools!**
 - Grid certificate with VO registration is essential
 - /atlas/de VOMS role is beneficial

- **Grid resources:**
 - additional resources (CE, SE) are ATLAS wide usable/readable
 - privileged access only via /atlas/de VOMS role (CE, SE)

- **Interactive resources:**
 - registration is needed, see <http://naf.desy.de>
 - authentication via Grid proxy and gsi tools (gssh/gsiscp/gsisftp from Grid UI)

- **ATLAS TAG + Conditions DB**

Support

- The NAF is a joint venture between DESY IT and the German particle physics groups!
- **Support:**
 - problems with hardware, operating system and common software: naf-helpdesk@desy.de (IT)
 - general ATLAS problems: <https://hypernews.cern.ch/HyperNews/Atlas/get/gridkaCloudUserSupport.html>
Please, use it!
 - specific ATLAS problems, e. g. requests for accounts, resources and ATLAS software: naf-atlas-support@desy.de (ATLAS-D/DESY)
 - don't contact specific people in case of problems!
- **NAF User Committee (NUC):**
 - user committee with 2 experiments contacts each and NAF admins
 - ATLAS-D: Jan Erik Sundermann (Freiburg), Wolfgang Ehrenfeld (DESY)
 - minutes are distributed to users, give feedback to experiment contacts
 - <http://naf.desy.de/nuc>

Summary

- The NAF is ready and can be used! Try it out.
- For documentation and tutorials see:
 - <http://naf.desy.de>
 - <http://naf.desy.de/atlas>
