

Dear Prof. Kiesling, We at the University of Tabuk, (UT), would like to apply for DEPFET membership. We believe our current activities with the PiXel Detector (PXD) at Max Planck institute of Physics (MPP) will qualify us for such membership. In particular working on performing a cosmic test at UT of the 1-2 large PXD modules and also working on a setup to test the PXD with cosmic rays at KEK. We are also active in Belle II tracking group merging tracks in the vertex detector with the central drift chamber.

We will be also glad in the future to contribute to other DEPFET activities especially if our department is (and will be) equipped for such tasks.

Thank you, Rachid
