

LMU München - Excellence Cluster Universe

# **PS & Services**

## **Stefan Rummel**

**PXD SVD Meeting Pisa** 1.10.14-3.10.14

## **Overview**

- Preproduction, mechanical integration of PS system
- Services:
  - Kapton development
  - Patch pannel, Docks
- Main production

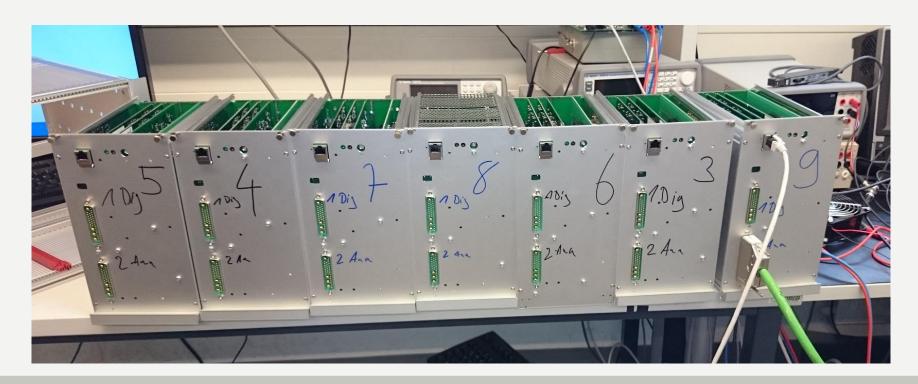

Stefan Rummel

## **Preproduction**

- 8 units are ready and calibrated
- → 24 Channels each, Steering voltages are applied relative to Source
- Adapter boards for EMCM are available
- Power cables arrived from EMS (1 + 3 sets 15m / 4m available)

## **Mechanical Integration**

- First Backplanes available
- Tests are promising

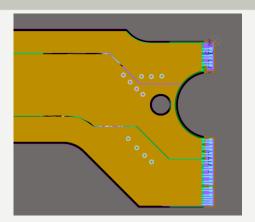

# Services – Kapton – Current in Bonds

- Recognized issue with PXD9 Bond pattern for various supply voltages (DHP\_IO,DHP\_CORE)
- Load on singles wires ~500mA

#### Measure to get rid of this issue:

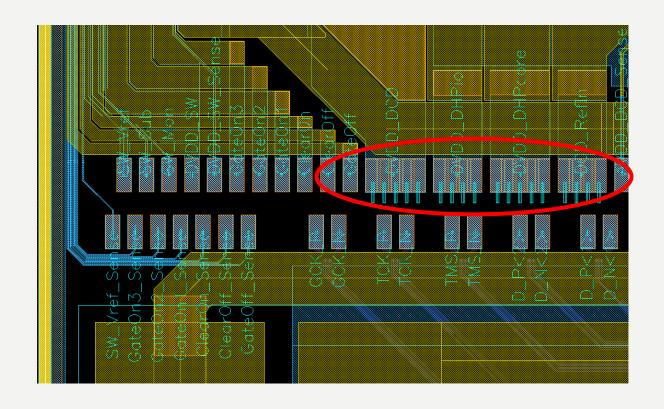

- Thicker bonding wire 30mu instead of 25mu
  - Wire successfully tested at MPI
  - Pull strength 1.5x better than 25mu wire
  - $\rightarrow$  Current density improved by x1.4
- Change of PXD 9 layout incorporating wider pads and balancing currents between various supplies
  - Removal of obsolete TML's in Midlayer
  - → No bond carries more than 120mA

# Services – Kapton – Current in Bonds

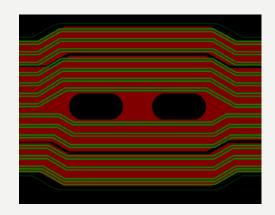

# Services – Kapton – Signal integrity

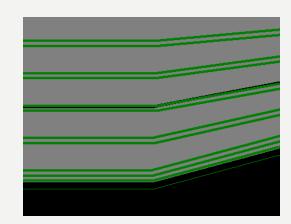

- Some indication that certain layout features have impact on link stability
  - Distance to edges of reference planes

• Aiming for production in October

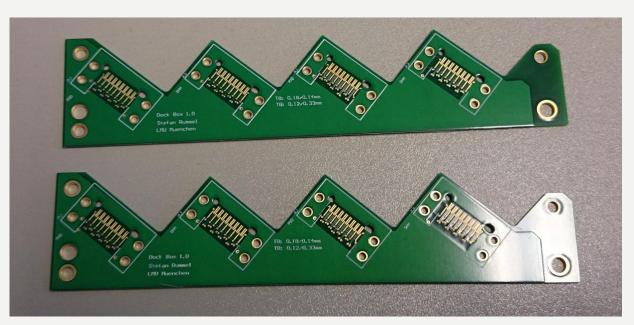

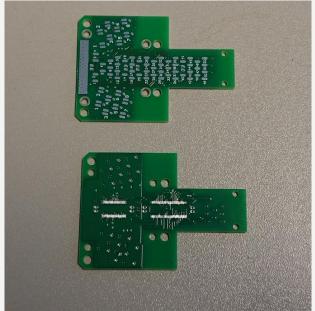

# Services – Docs, PP

- Electrical prototypes of Docks and PP's arrived for the signal integrity measurements @ MPI
- → Important input for finalizing design of Docks, PP and Data cables and procurement

Stefan Rummel

## **Main Production**

- One batch of 68 units including those for Belle PF
- Started to fix some remaining issues:
  - Added possibility to go for 200V on HV
  - More conservative rating of some passives
  - More conservative layout of board with respect to design specs.
  - •
- Lesson learned from Preproduction put more time consuming work towards EMS (setting solder jumpers, basic electrical tests individual cards...)
  - → Significant speedup of commissioning of units
- Finalization of designs ongoing
  - MCU done
  - Step Down Converters done

## **Summary**

- Preproduction finished
- Ready to distribute more PS's to our collaborators
  - EMCM adapter and cables available
  - Adapters for other systems on request
- Services fixed issue with bond wires, improving signal integrity of TML's
- Main production started

Stefan Rummel
