

Overview of QCD measurements at high p_T

Thursday, 8 October 2015 11:25 (25 minutes)

This talk gives an overview of QCD measurements at high p_T at the LHC and other colliders. Recent results on inclusive jet, dijet and multijet production measurements are presented together with results of α_S extraction and constraints on the PDFs of the proton. Precision measurements of vector bosons ($V = W, Z$ or γ) in association with jets allow for stringent tests of perturbative QCD. The measurements are compared to next-to leading order calculations and event simulations that devise matrix element calculations interfaced with parton showers.
