

LHCb results from proton ion collisions

Wednesday, 7 October 2015 11:30 (20 minutes)

Proton-lead and lead-proton data taking during 2013 has allowed LHCb to expand its physics program to heavy ion physics. Results include the first forward measurement of Z production in proton-lead collisions as well as a measurement of the nuclear modification factor and forward-backward production of prompt and displaced J/psis, Psi(2S) and Upsilon. Angular particle correlations have also been measured for events of varying charged particle activity.
