

# Investigation and Implementation of an Active Stabilisation Scheme for Superconducting Transition Edge Sensors

Philipp Bauer

# Table of Contents

## Introduction

- Direct Dark Matter Search and CRESST
- Transition Edge Sensors (TES)

## Active TES Stabilisation

- Control Pulse Stabilisation
- Transition Recorder
- Working Point Finder

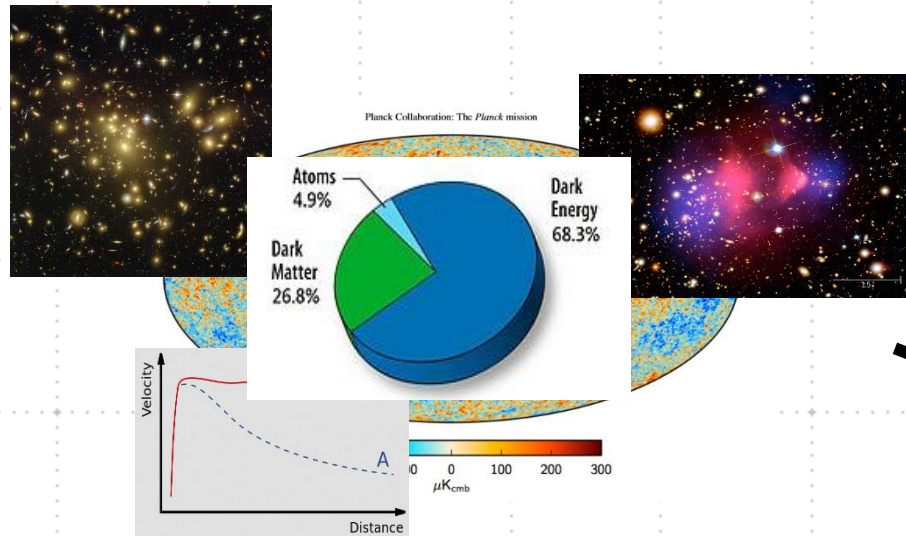

## Summary

# Direct Dark Matter Search

Introduction

Active TES  
Stabilisation

Summary

CRESST – Cryogenic Rare Event  
Search with Superconducting  
Thermometers

Thermometer based readout of  
deposited energies

Small deposited energies  $\sim 10$  keV  
and rates  $\sim 0.01$  /kg /day

# CRESST

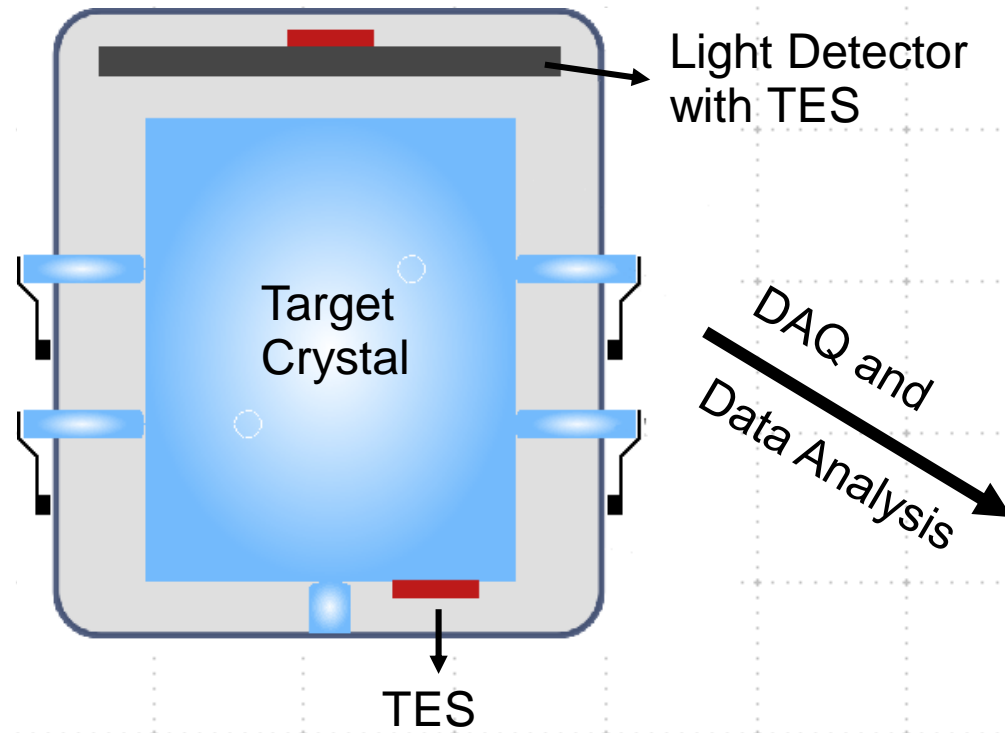

Introduction
Active TES Stabilisation
Summary

# CRESST

- Introduction
- Active TES

# Control Pulse Stabilisation

# Control Pulse Stabilisation

Introduction

Active TES  
Stabilisation

Summary

The screenshot shows the 'Test Puls Settings' window. It includes sections for signal selection, testpulse analysis (baseline length, peak position, ADC channel), general options (time between pulses, graph), PID settings (KP, TN, TV, start out, working point, anti-windup, control variables), offset options (current offset, new offset), and control buttons like 'Apply Wavesettings', 'Apply AF Settings', 'Reset PID and Apply Settings', and 'Arm and boom'.

## General Requirement

Flexible and easy to use

## Input Parameters

Control Pulse Settings

Control Pulse Preview and  
Control Pulse Rate

Manual Voltage Offset  
Controls

Control Pulse Analysis  
Options

Controller Parameters

# Control Pulse Stabilisation

Introduction

Active TES  
Stabilisation

Summary

Control Pulse Height vs Time  
Not Stabilised

Control Pulse Height vs Time  
Control Pulse Stabilised

# Additional Programs

Introduction

Active TES  
Stabilisation

Summary

## Motivation

- Characterisation of TES → Add new possibilities due to the new hardware
- Determination of parameters for the stabilisation
- Test a features that could be useful in future CRESST runs with many detectors

# Transition Recorder

Introduction

Active TES  
Stabilisation

Summary

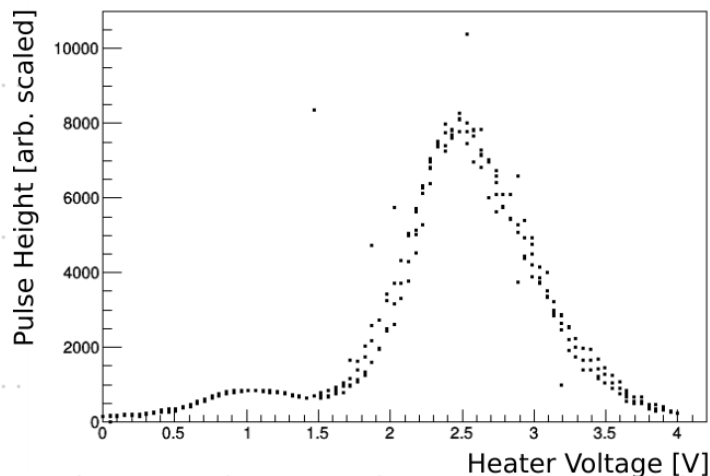

Transition Recorder records the TES transition in different ways.

Application:

Characterisation of the TES

- Transition width
- Critical temperature
- Linearity

Pulse Height throughout Transition

Determination of the controller parameters

Determination of the Working Point

# Working Point Finder

Introduction

Active TES  
Stabilisation

Summary

## Problem

- Find the right heating power **and**

- find the ideal readout current, which has a heating power of its own!

=> **Two** parameters have to be varied! Very time consuming if done manually as in CRESST.

# Working Point Finder

Introduction

Active TES  
Stabilisation

Summary

## Problem

- Find the right heating power **and**
  - find the ideal readout current, which has a heating power of its own!
- => **Two** parameters have to be varied! Very time consuming if done manually as in CRESST.

## Solution

Automatically vary those two parameters and record a quantity that indicates the “quality” of the working point.

# Working Point Finder

Introduction

Active TES  
Stabilisation

Summary

## Problem

- Find the right heating power **and**
  - find the ideal readout current, which has a heating power of its own!
- => **Two** parameters have to be varied! Very time consuming if done manually as in CRESST.

## Solution

Automatically vary those two parameters and record a quantity that indicates the “quality” of the working point.

## Chosen quantities

Pulse Height + Signal to Noise of different heater pulses

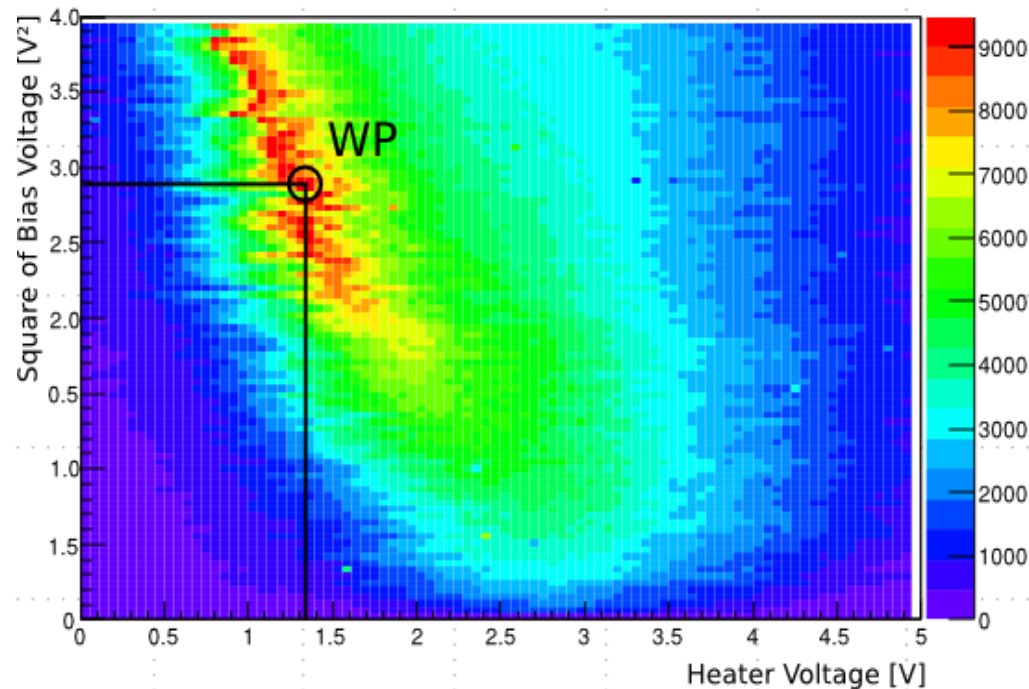

# Working Point Finder

Introduction

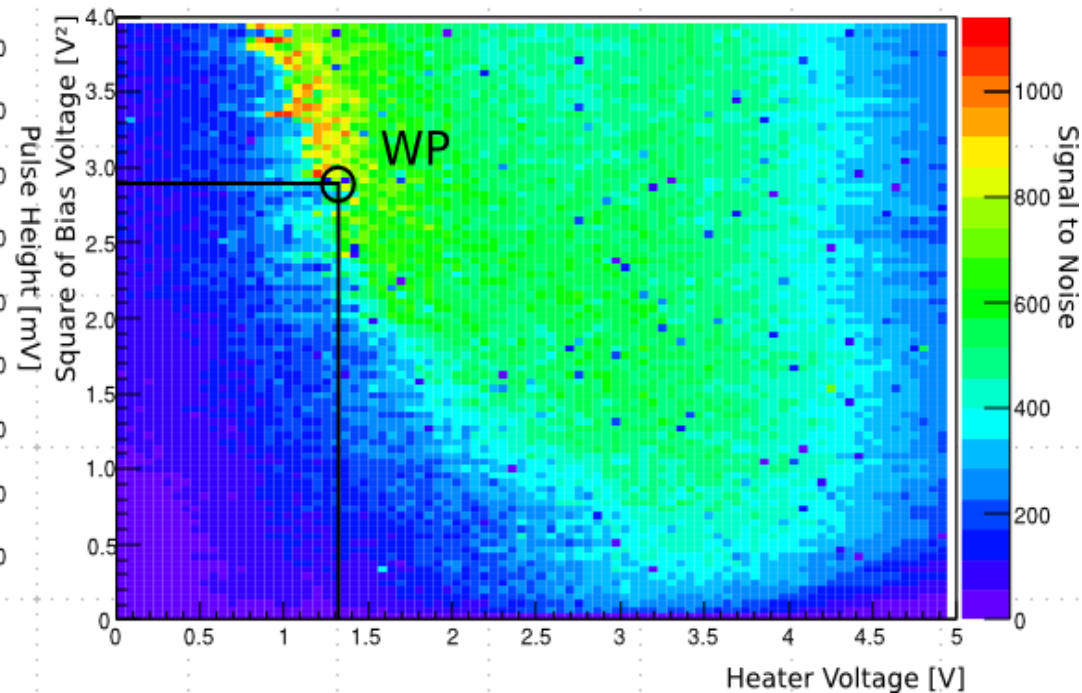

Active TES  
Stabilisation

Summary

Working Point Search  
- Pulse Height -

Working Point Search  
- Signal to Noise -

# Summary

Introduction

Active TES  
Stabilisation

Summary

- CRESST uses Transition Edge Sensors
- Transition Edge Sensors are based on superconducting thin films and require a stabilisation
  - **Heater Pulse** based stabilisation implemented at a cryostat at the TU Munich
    - => CRESST like test conditions
  - Supplementary software (**Transition Recorder, Working Point Finder**) developed
  - Functionality and performance were demonstrated in test measurements

**Thank you for your attention**
