

Tracking Performances

outline

- ✓ Introduction
- ✓ release-00-06-00
- ✓ new SVD L3 position
- ✓ Conclusions

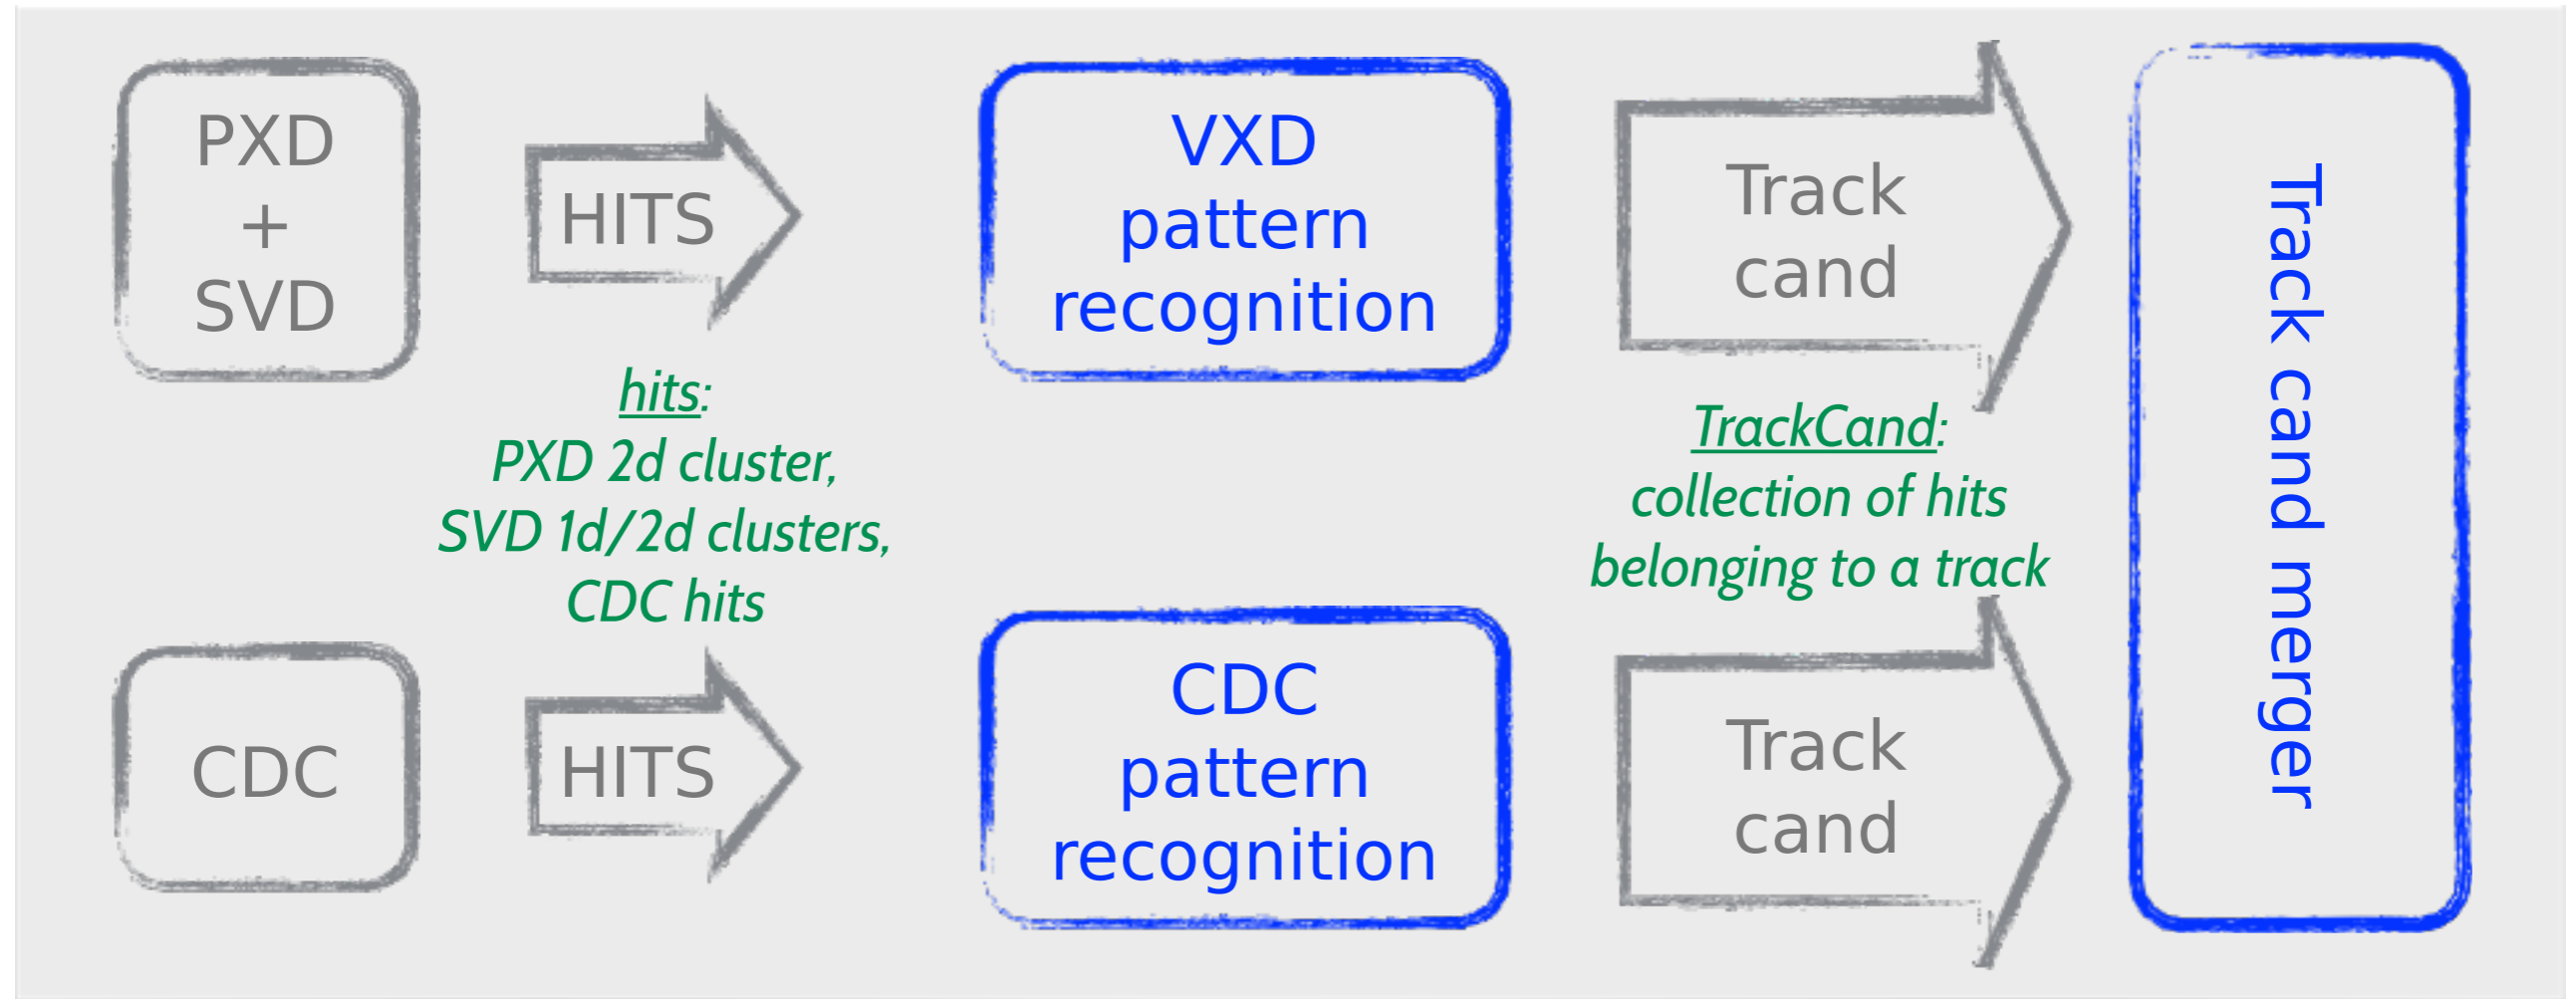

Jakob Lettenbichler
& Giulia Casarosa

for the Tracking Group

23nd *Bellell* General Meeting ~ February, 3rd 2016

Track Reconstruction (1)

*no PXD data reduction
simulation*

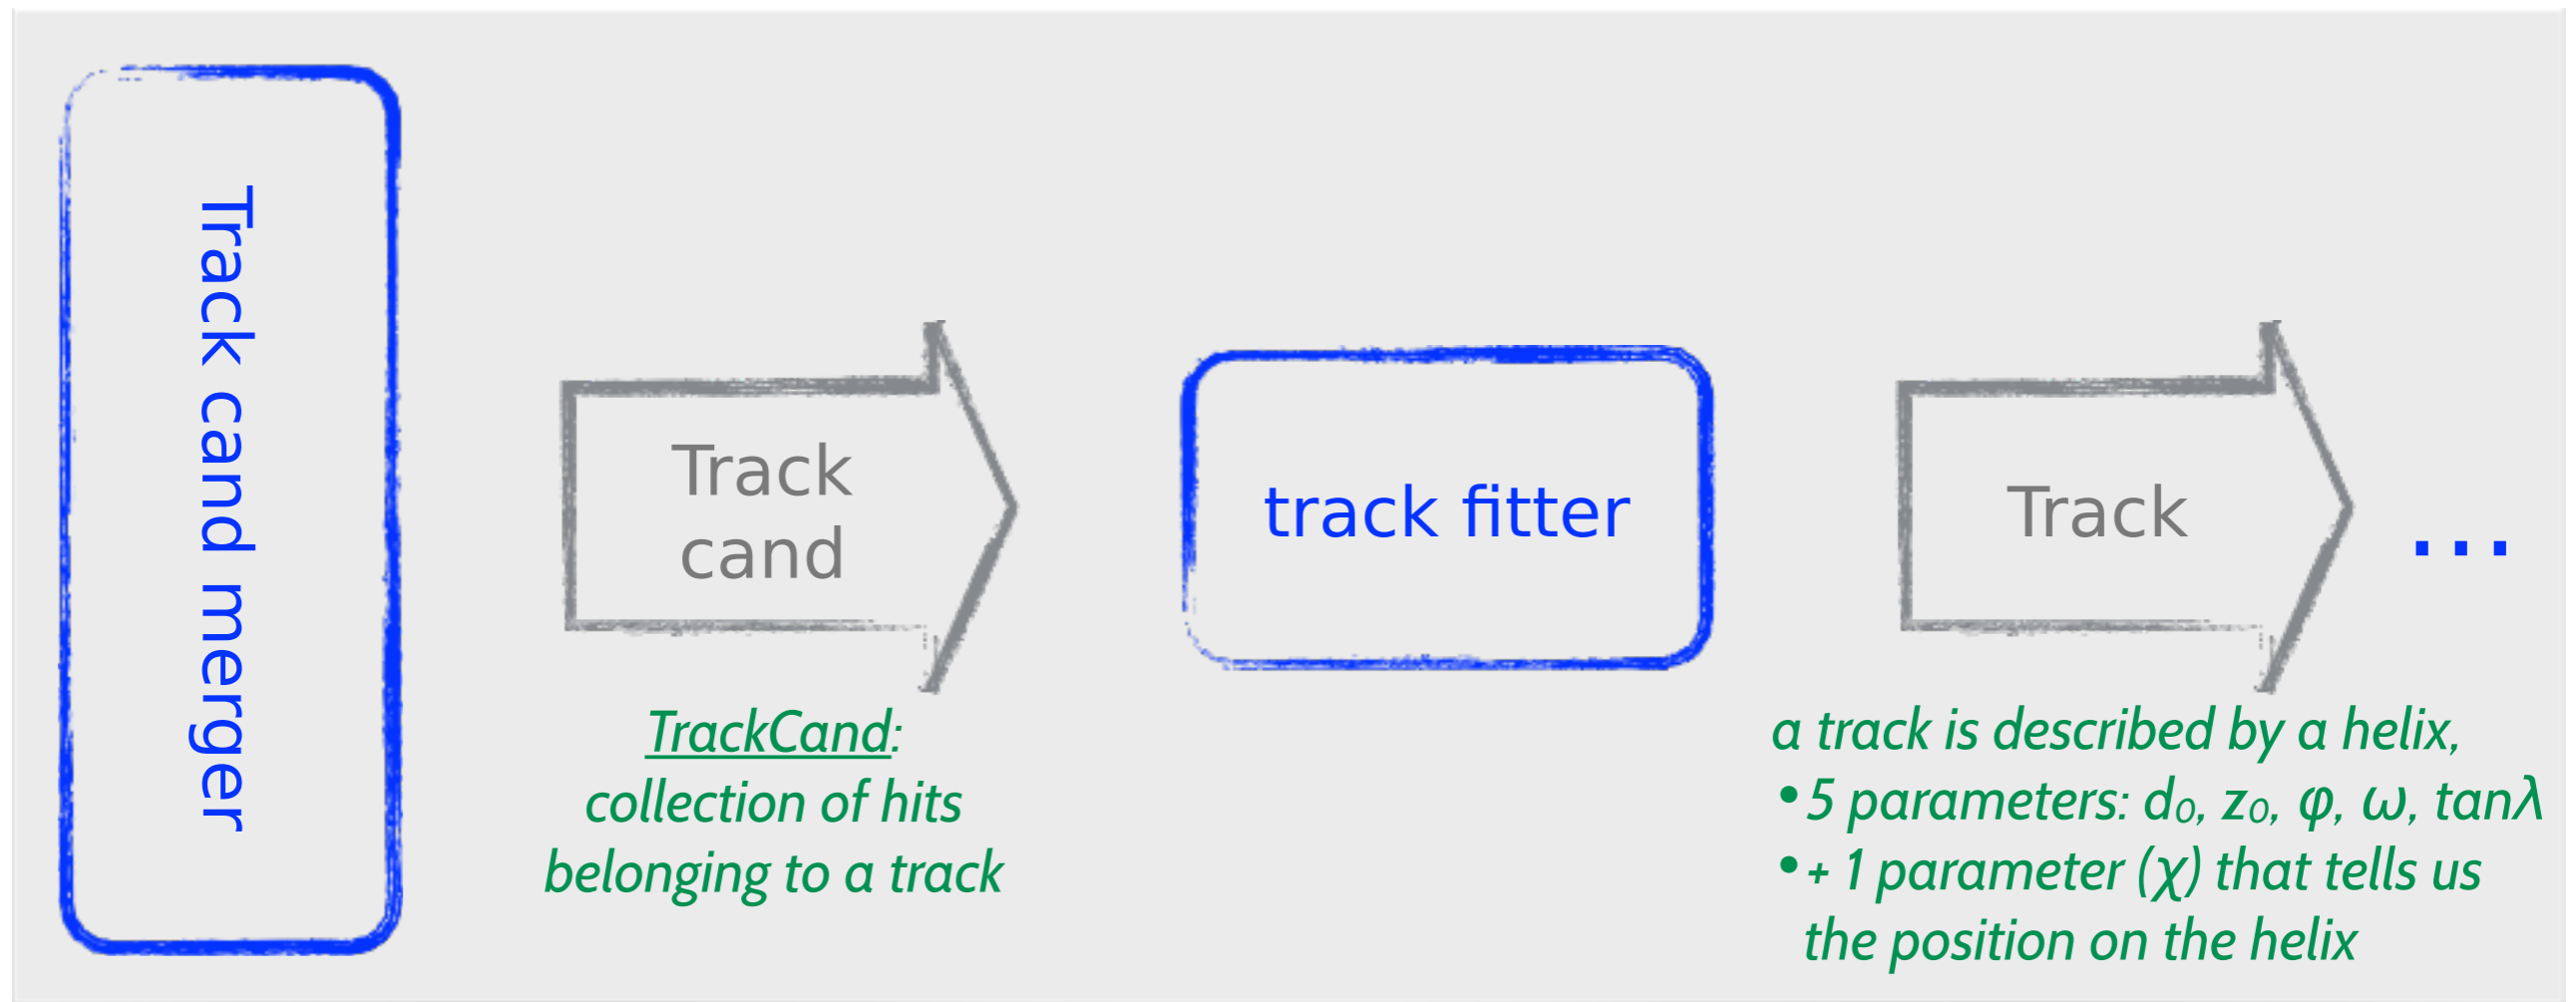

I will show the performances in these two cases

r00-06-00 with new CDC TrackFinder

New geometry based on changed L3 radius

MC-assisted merger

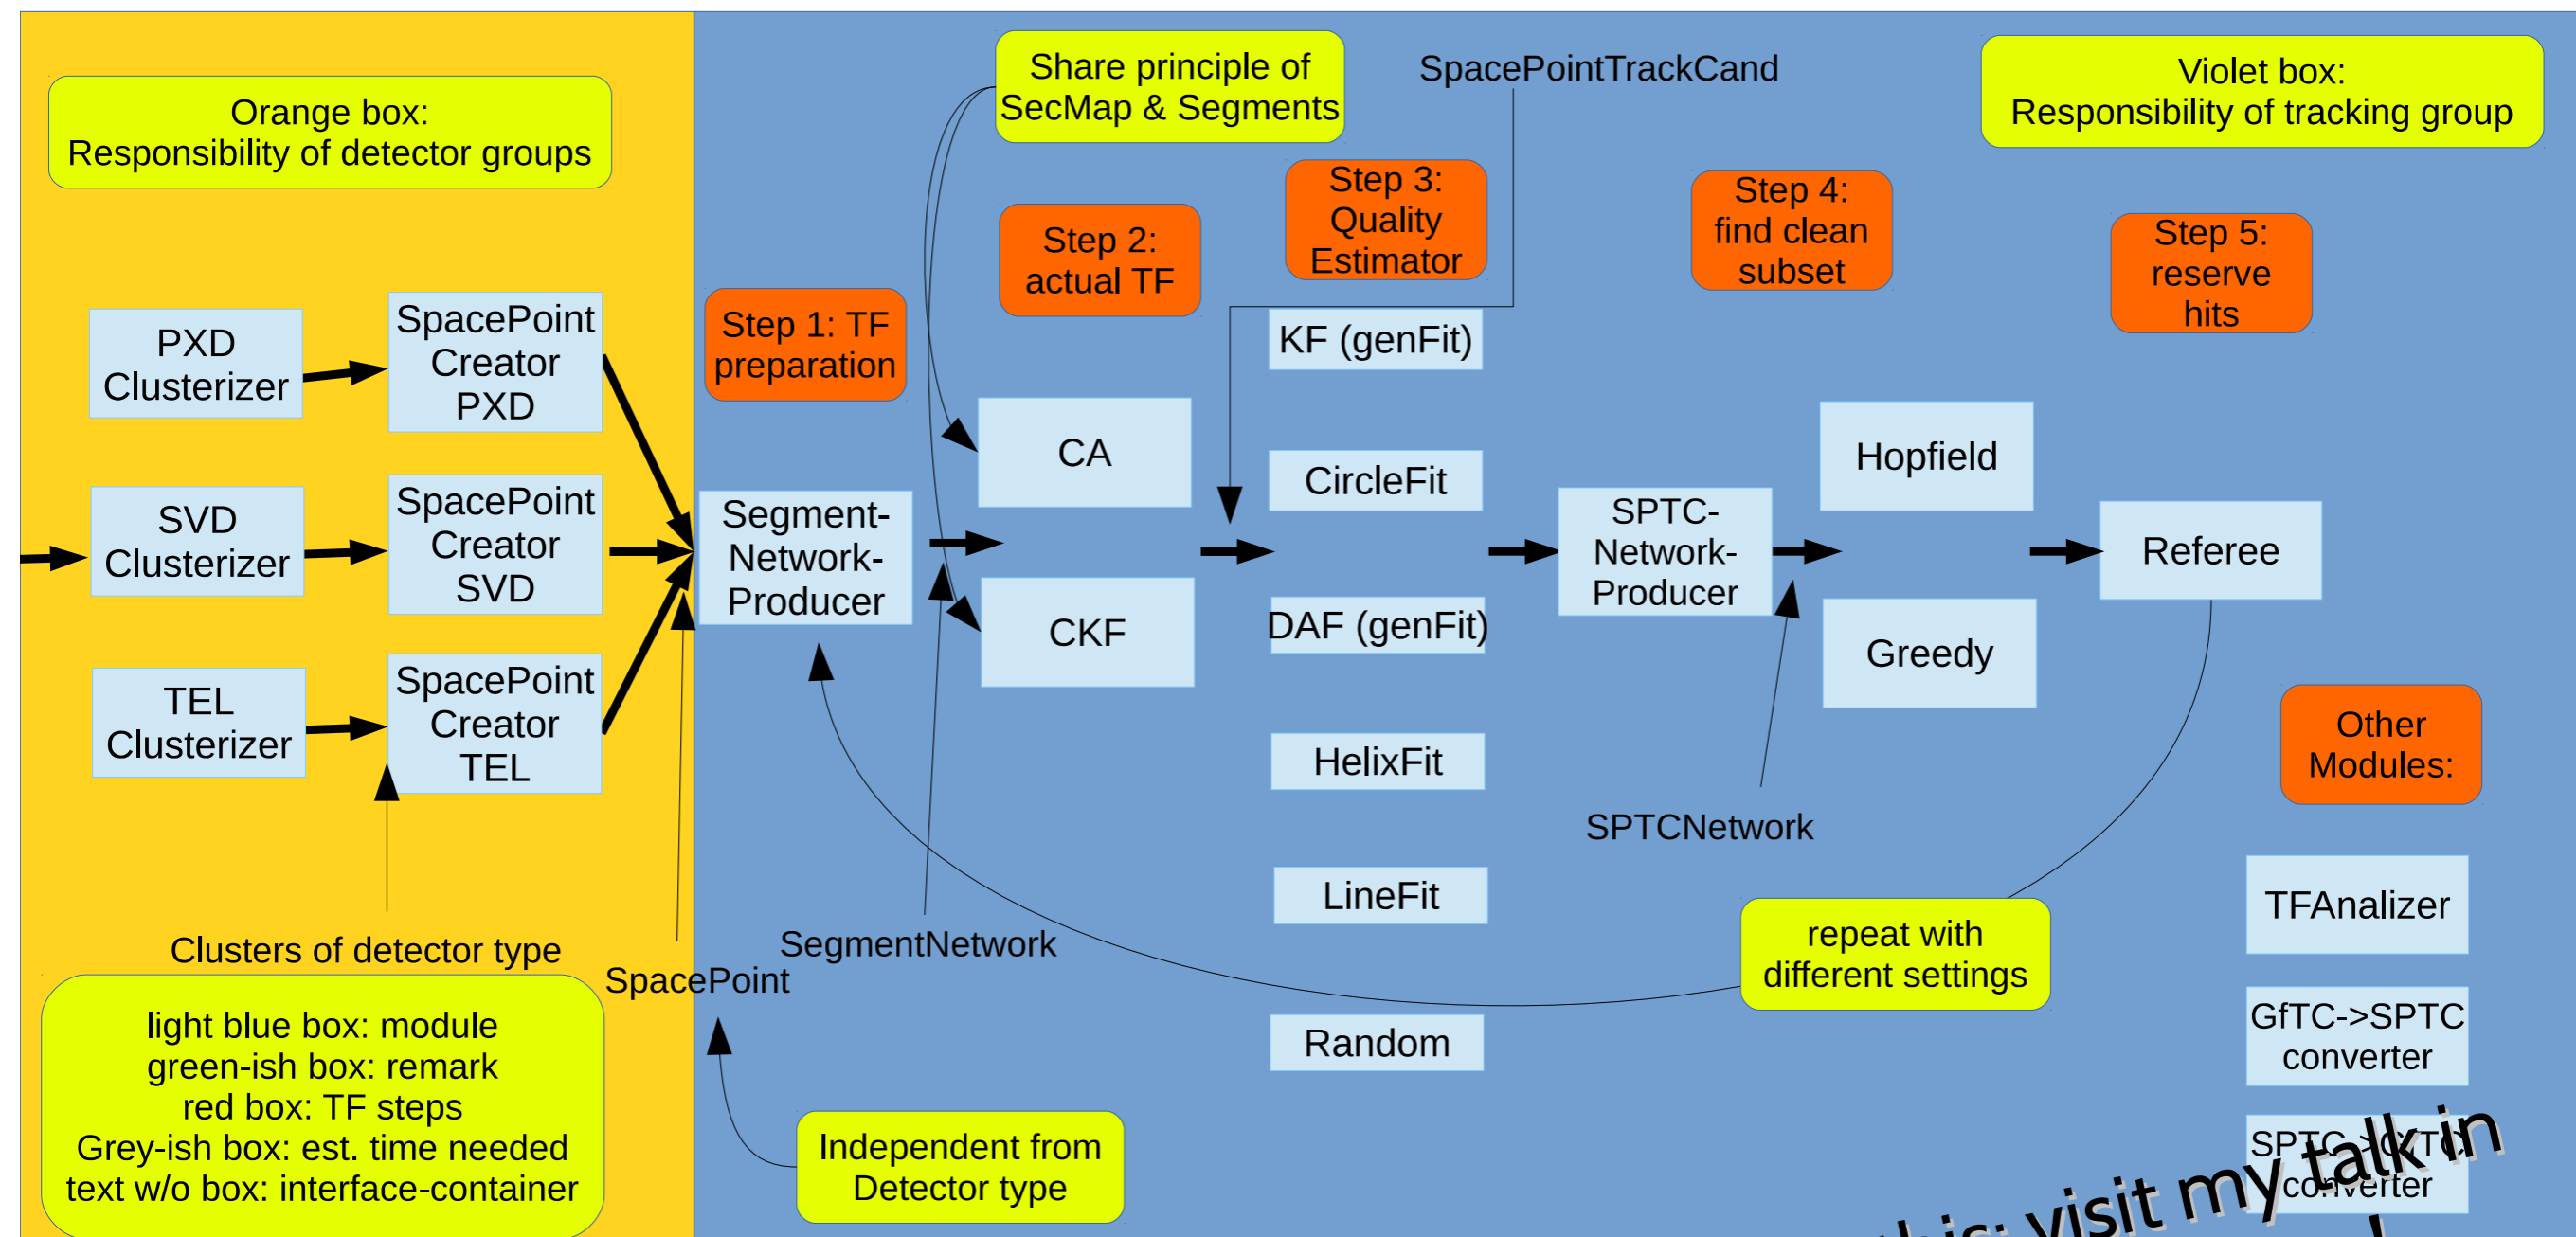

Track Reconstruction (2)

VXD
pattern
recognition

Track Reconstruction (3) - a glimpse around the corner

Future state of the trackFinderVXD-approach (event-part)

~ main work finished within the next few months

More details on this: visit my talk in this hall today @ 5:50 p.m.!

Track Parameterisation

transverse plane

- POCA = Point Of Closest Approach
- d_0 is the 2d signed distance of the POCA from the z axis, the sign depends on the angular momentum of the track (>0 in the fig.)
- φ_0 is the angle between p_t and the x axis at the POCA, $\varphi_0 \in [-\pi, \pi]$
- the sign of ω , the curvature, is the same as the charge of the track (>0 in the fig.)

longitudinal view

- $\tan\lambda$ is the ratio of p_z and p_t , $\lambda \in [-\pi, \pi]$
- z_0 is the signed distance of the POCA from the transverse plane

release 00-06-00 performances

~ latest release available ~

Integrated Efficiency

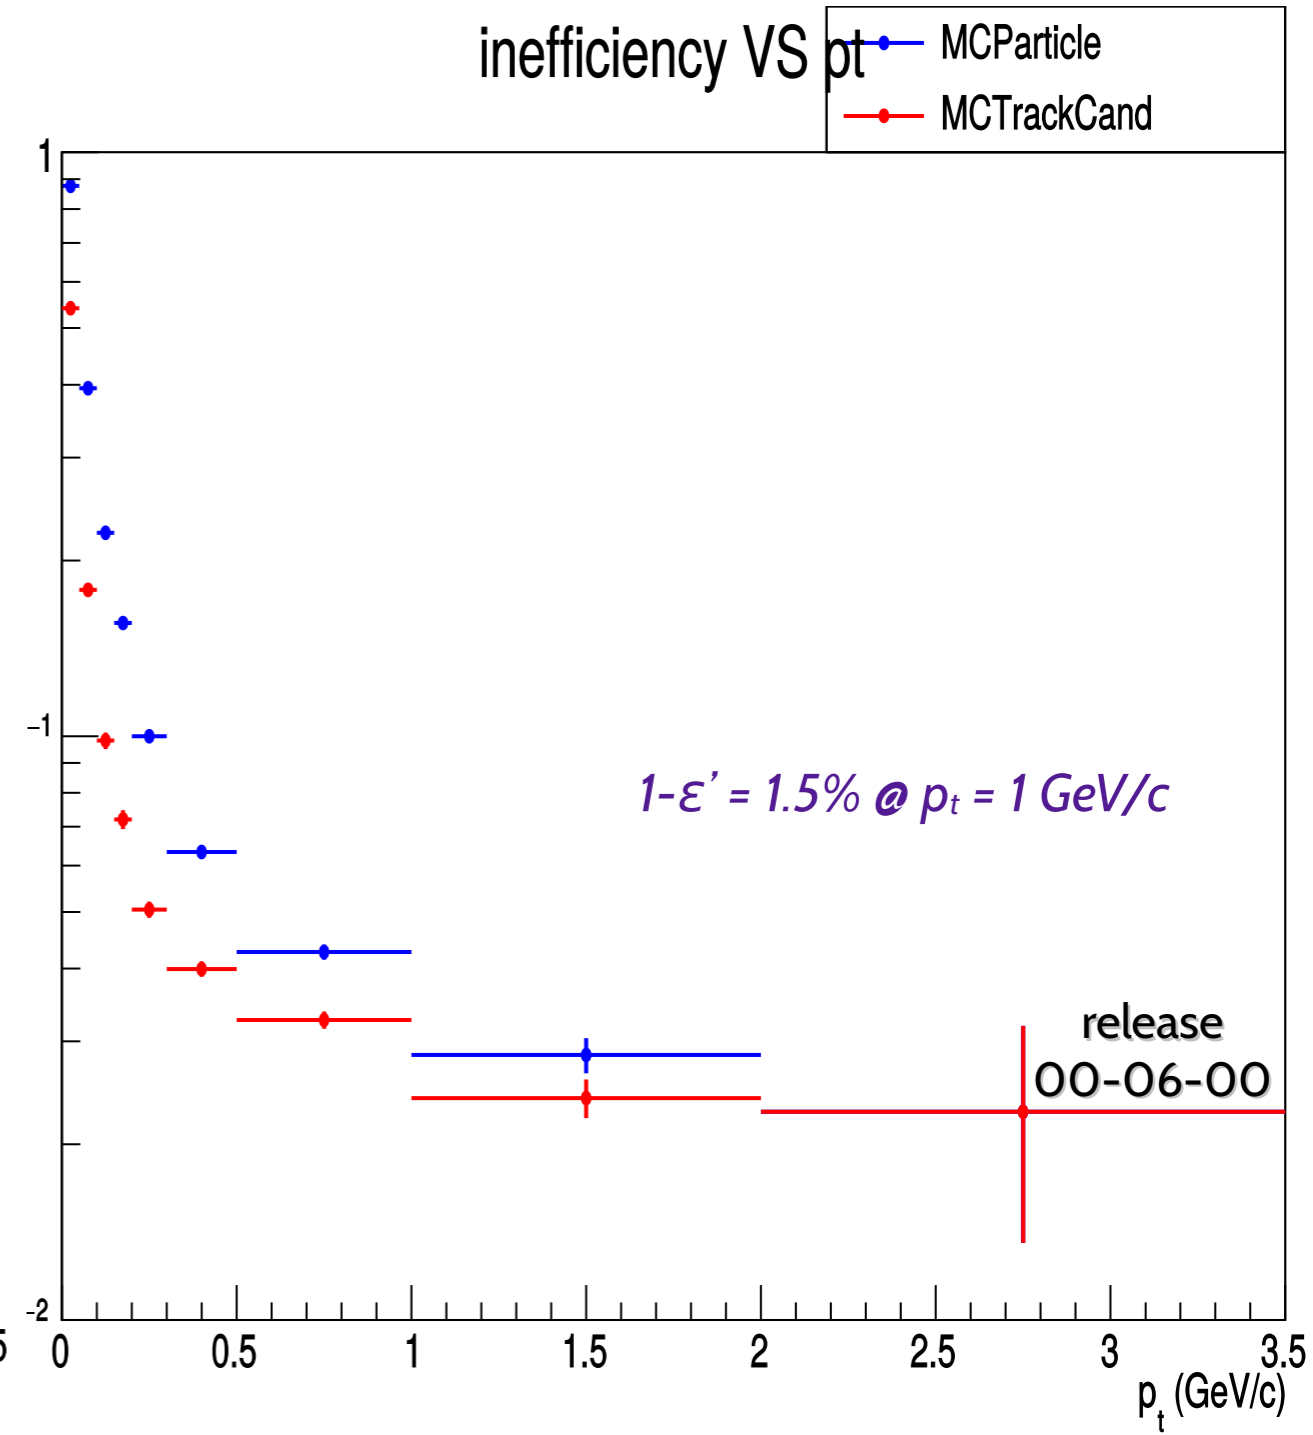

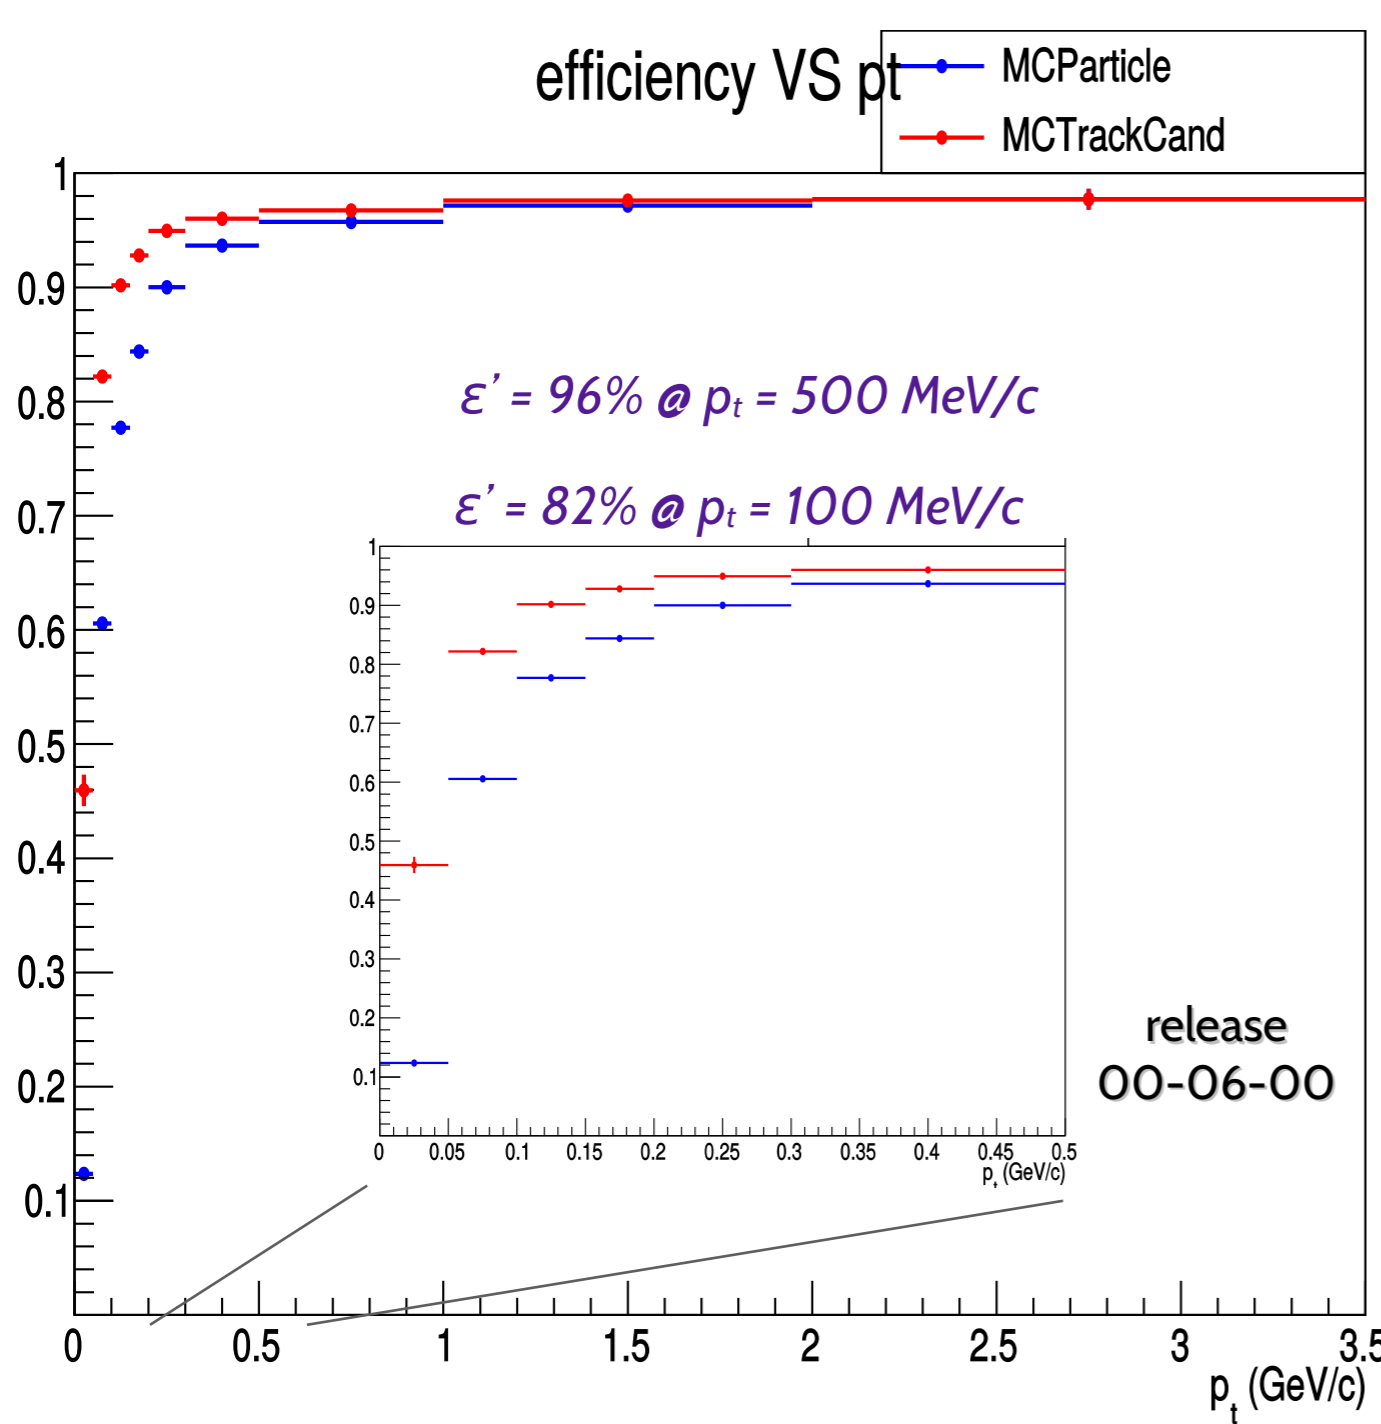

→ this study is based on a sample of 10k Y(4S) generic decays reconstructed with the official standard reconstruction with the addition of the MC information

definition	efficiency (%)	release 00-05-03	release 00-06-00	revision 24691
<u>#MCParticles with at least one associated Track</u> # MCParticles	physical	85.6±0.1	85.3±0.1	85.3±0.1
<u>#MCTrackCands with at least one associated Track</u> #MCTrackCands	geom. accept. & det. ineff. factored out	94.0±0.1	93.8±0.1	93.8±0.1
<u>#MCTrackCand with at least one associated TrackCand</u> #MCTrackCands	pattern recognition	96.6±0.1	94.9±0.1	95.0±0.1

NOTE: MCTrackCand from ideal pattern recognition

- changes since r00-05-03: new CDC tracking (r00-06-00) and new SVD L3-geometry (r24691)
- pattern recognition efficiency is slightly worse compared to r00-05-03
- physical efficiency is compatible with last release

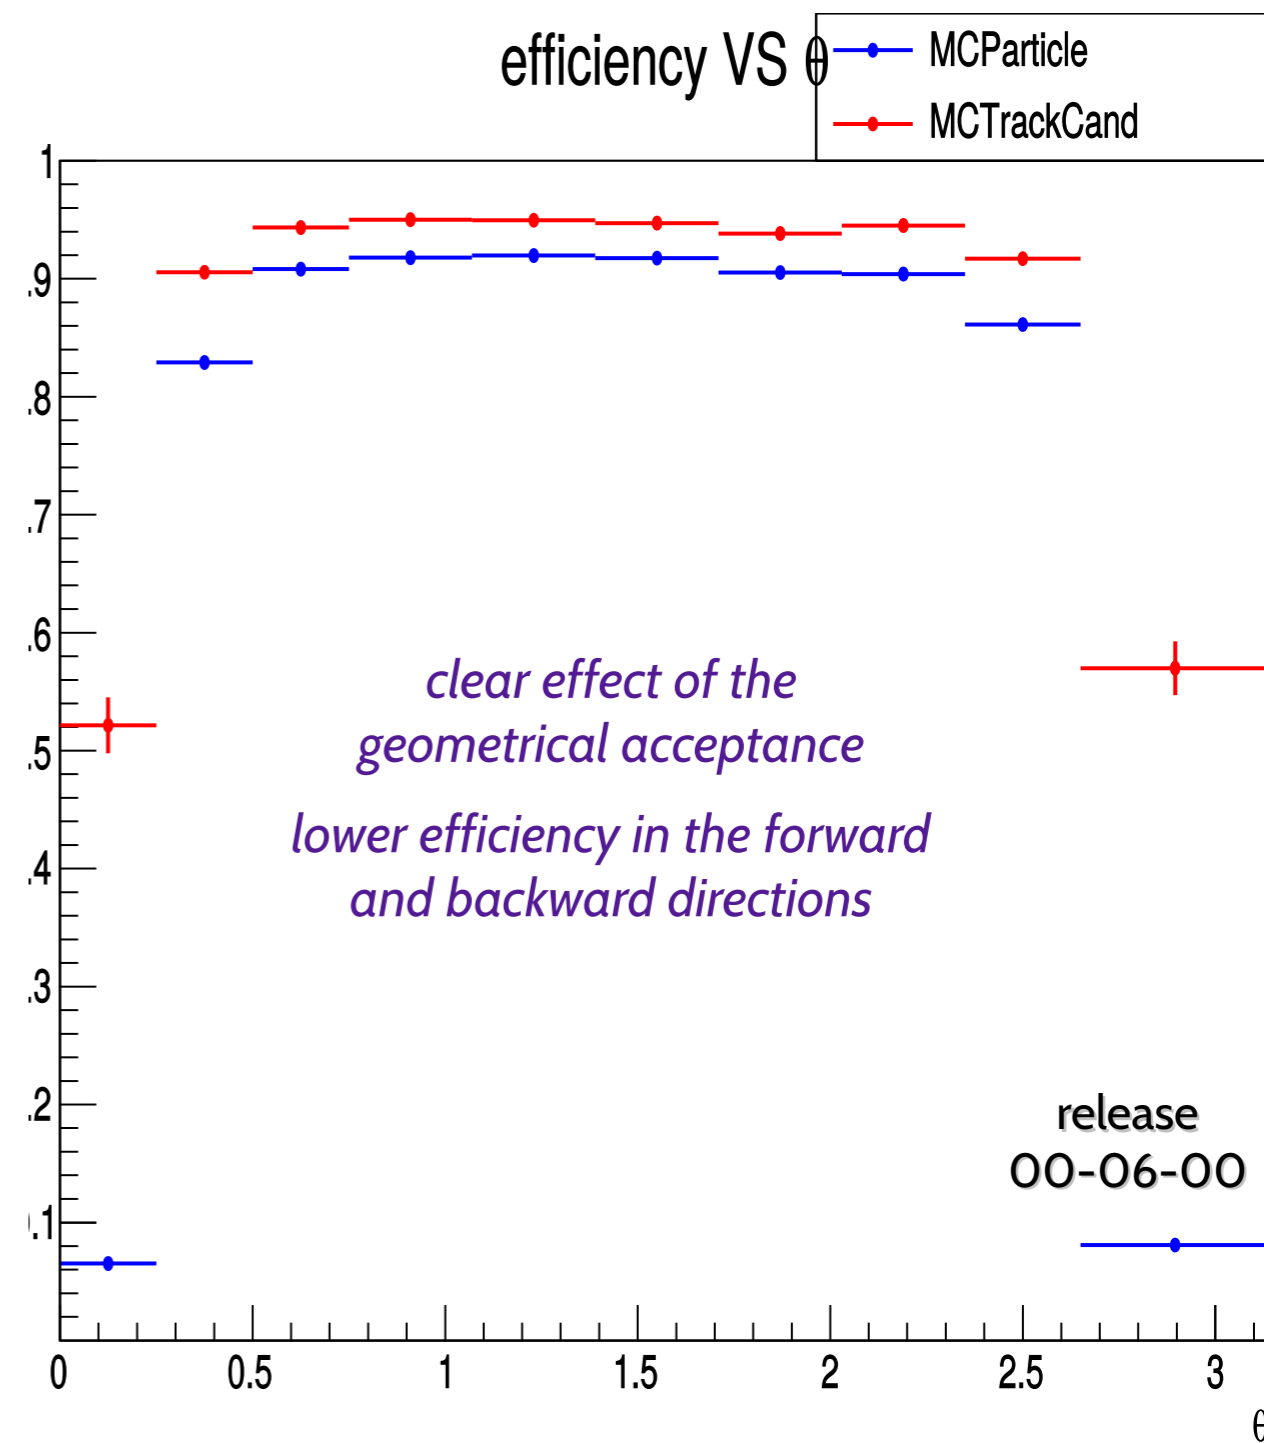

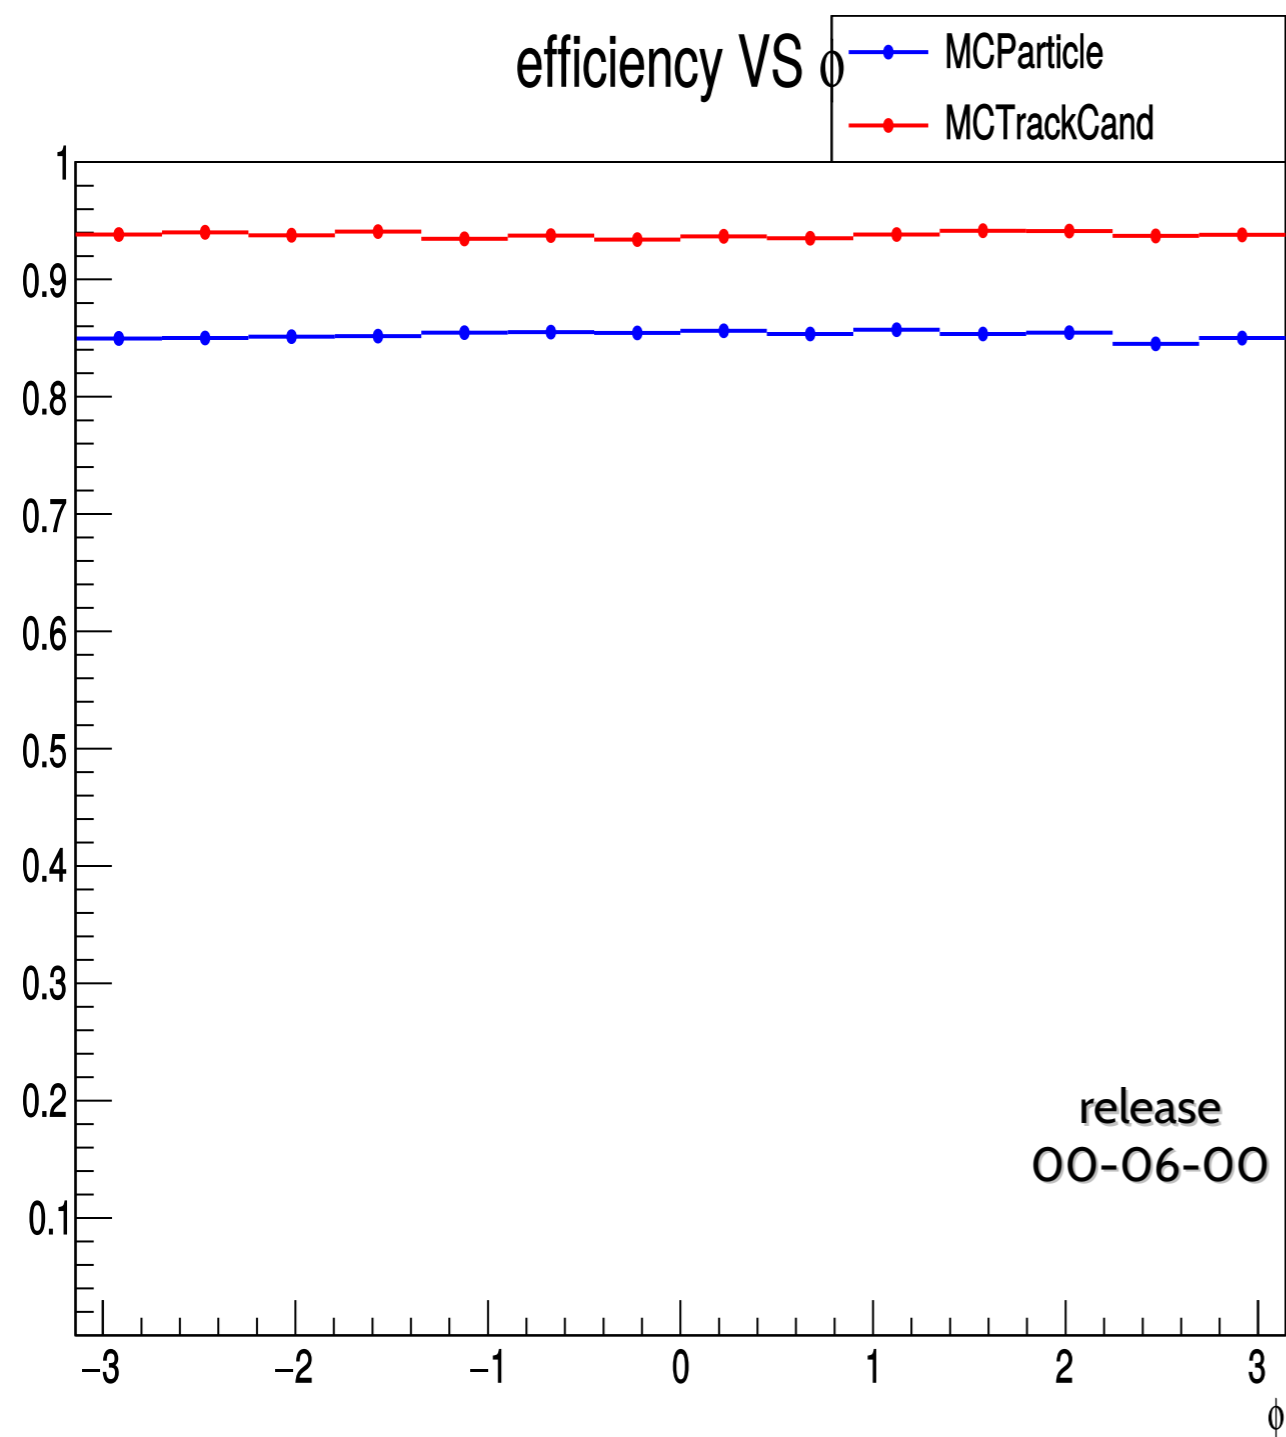

Efficiency VS Transverse Momentum

Track Parameters Resolutions (reco-true)

d_0 residuals

φ_0 residuals

ω residuals

z_0 residuals

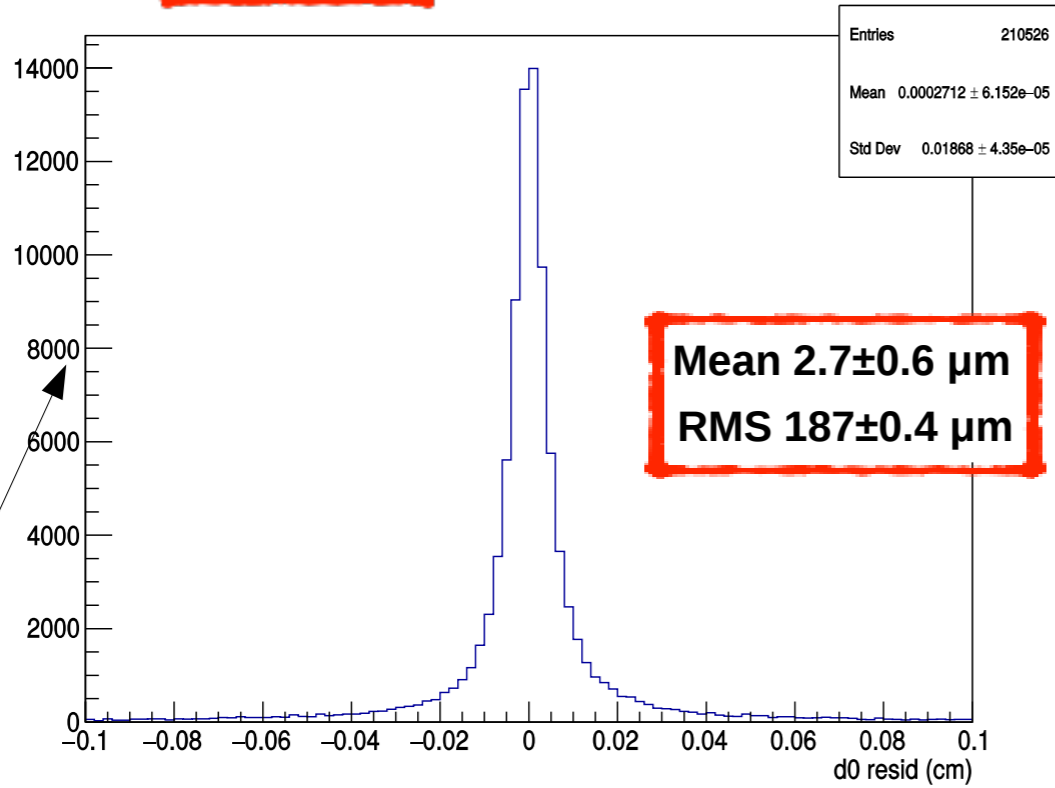

$\tan\lambda$ residuals

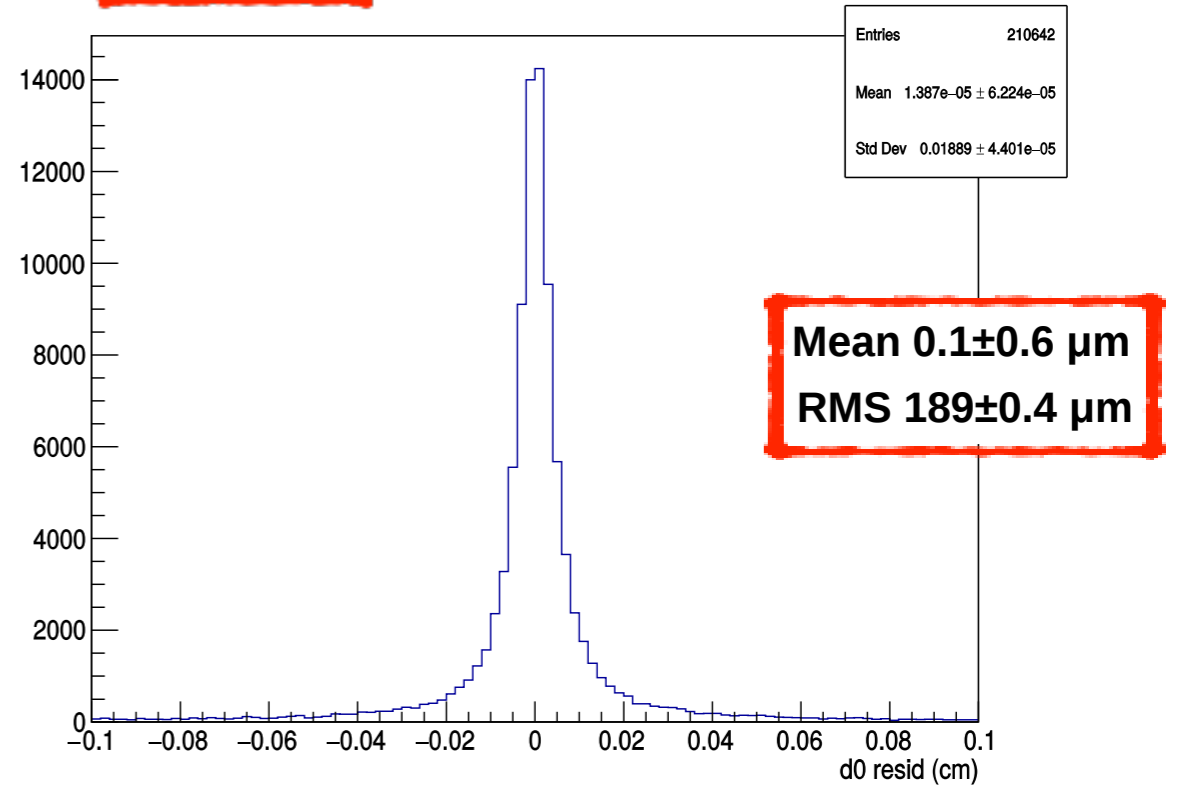

Track Parameters Resolutions (reco-true)

d₀ residuals

d₀ residuals

release 00-06-00

z₀ residuals

r24693

z₀ residuals

tanλ resid

Track Parameters Pulls (reco-true)/error

d0 pulls

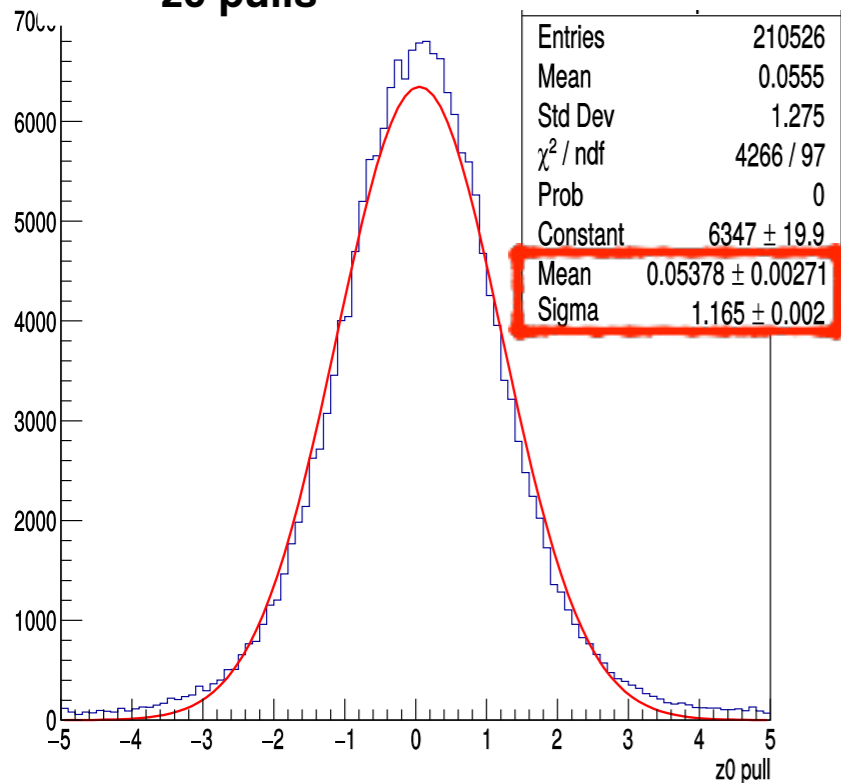

phi pulls

omega pulls

z0 pulls

tan lambda pulls

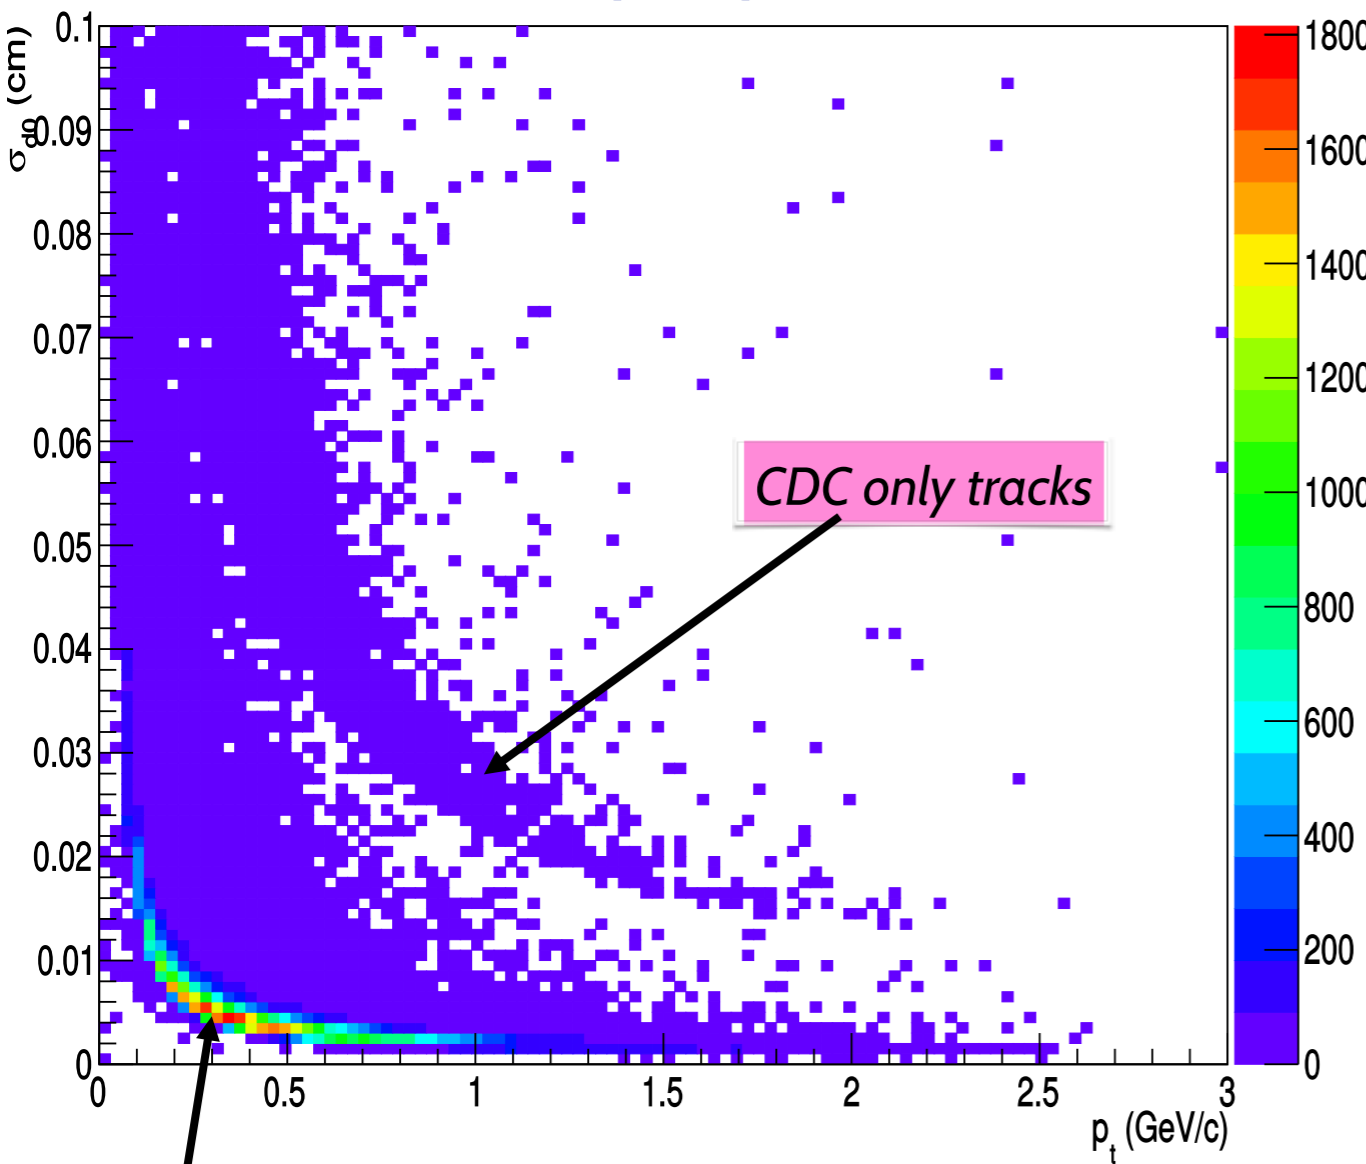

- 33% underestimated errors on ω , 13-20% on the other track parameters
- bias in d0 (2%), z0 (5%), ω (1%) and tan λ (7%)

Impact Parameters Errors VS p_t

σ_{d0} VS p_t

transverse impact parameter

σ_{z0} VS p_t

longitudinal impact parameter

w PXD clusters

~66% of all tracks

Comparison with *BABAR* Tracking

- *Belle II* VXD Tracking performs twice better than *BABAR*, when PXD clusters are attached to the track (66% of tracks have PXD cluster attached)

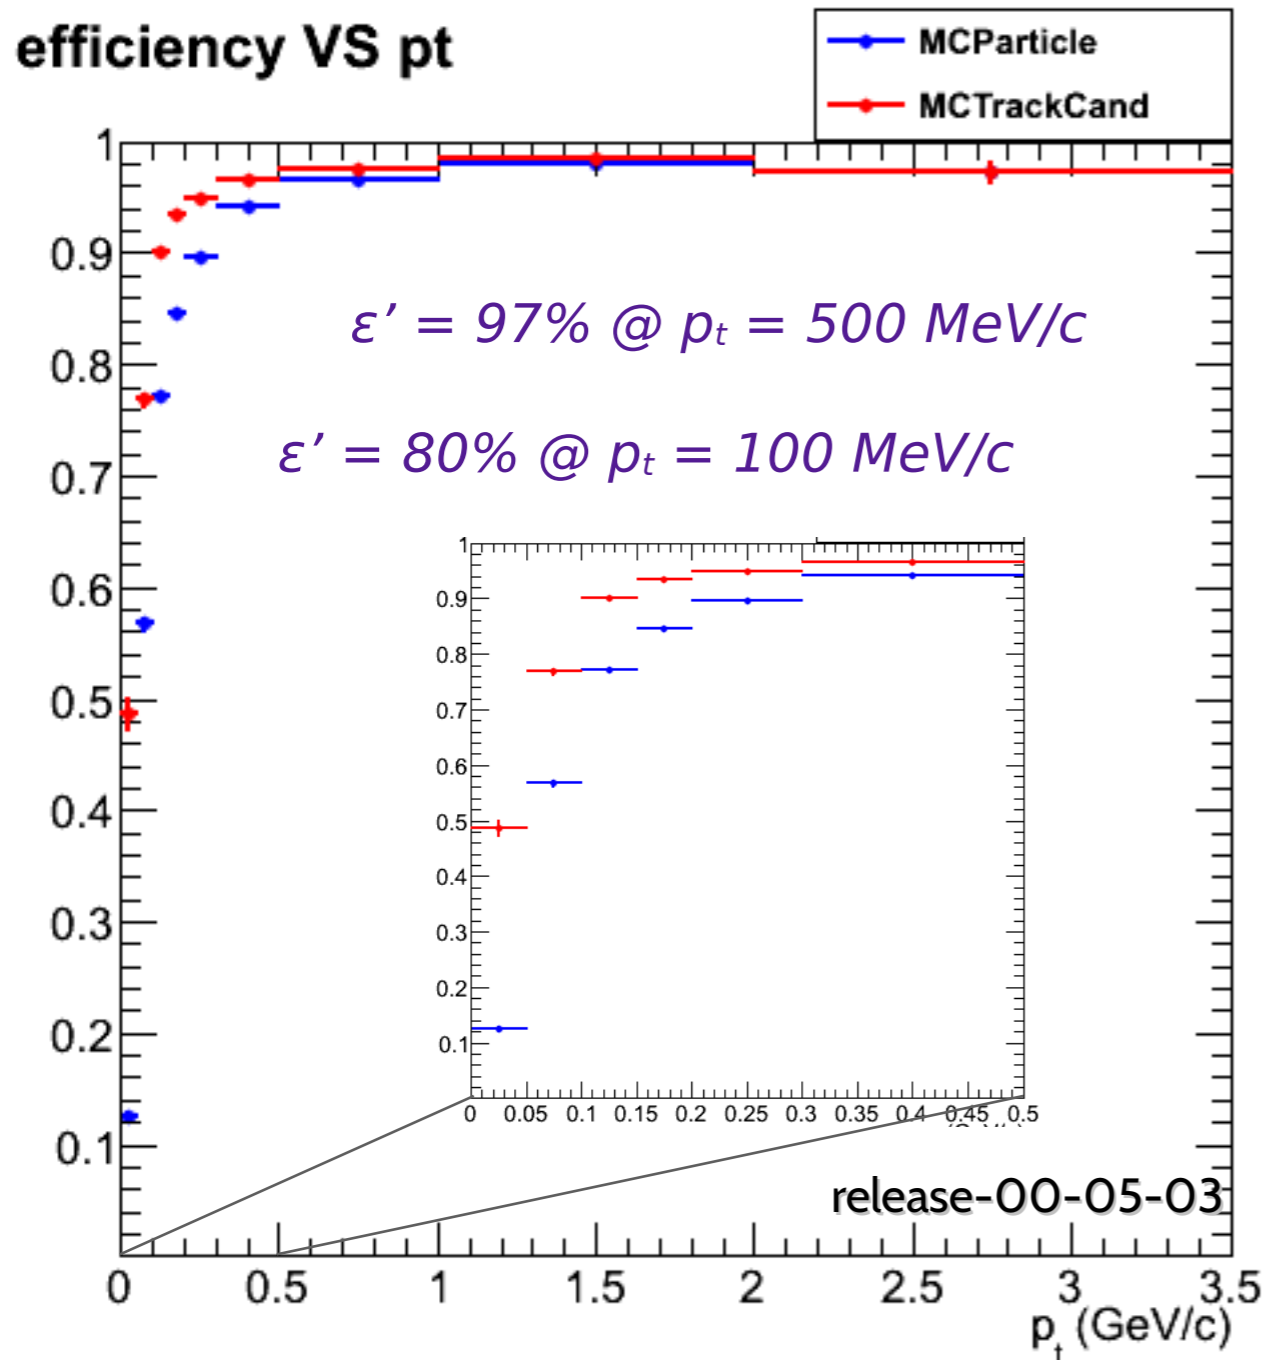

Conclusions

- Performances of Tracking in release-00-06-00 are mostly compatible with previous release
- New SVD L3 position does not have a visible impact on the performance
- An important step in tracking development was made: the new CDC Track Finder replaced Trasan and MC-free combining of TCs
 - ✓ the new CDC pattern recognition efficiency is compatible with Trasan
 - ✓ problems in fitting CDC track candidates at low p_t which dropped relative efficiency by $\sim 10\%$ are now gone
- A significant drop in number of tracks with PXD Clusters have been observed. A possible cause is the VXDCDCMatcher, which is now MC-free.
- Still a lot to improve (efficiency of using the PXD clusters, bias in the impact parameters, underestimation of the track parameters errors, ...)
- Still a number of missing parts in the tracking simulation (PXD data reduction simulation, MC-based track merging, extrapolation toward the CDC and the VXD, ...)
- write to tracking@belle2.kek.jp for feedbacks and questions

Thank You!
