

Pavel Šťavina, Comenius University

Status of the computing resources in Bratislava

- Upgrade and expansion of our computing cluster
- 14 new dualcore Athlon64 (i.e. 28 CPUs) are already ordered
- double mass storage capacity
- lot of work (and bureaucracy) - but significant computing power available

Future plans:

- for our group the highest priority are tasks linked to **ATLAS calorimeter calibration** and **top-quark-physics**
