NIFTy –Numerical Information Field Theory

Monday, 5 October 2020 15:30 (1h 30m)

NIFTy "Numerical Information Field Theory", is a versatile library designed to enable the development of signal inference algorithms that are independent of the underlying grids (spatial, spectral, temporal, ⋯) and their resolutions. Its object-oriented framework is written in Python, although it accesses libraries written in C++ and C for efficiency.
