Outline

Germanium
detectors and
low
temperatures

Oleksandr
Volynets

Germanium
detectors

Electronics

Electronic
pulses

Additional
feature

Conclusions

- Motivation: $0\nu\beta\beta$
- Germanium detectors
 - Operation conditions
 - Test stands
- Electronics and data collection
 - Special kapton cable
 - Data acquisition system (DAQ)
 - Way from photons to spectrum
- Electronic pulses
 - Pulse properties: rise time, amplitude
 - Influence of temperature difference on pulses: results
- Additional features
- Summary

Motivation (again)

Germanium
detectors and
low
temperatures

Oleksandr
Volynets

Germanium
detectors

Electronics

Electronic
pulses

Additional
feature

Conclusions

- Our aim is to search for $0\nu\beta\beta$

Motivation (again)

Germanium
detectors and
low
temperatures

Oleksandr
Volynets

Germanium
detectors

Electronics

Electronic
pulses

Additional
feature

Conclusions

- Our aim is to search for $0\nu\beta\beta$
- Higher Q -value is better

detectors and
low
temperatures

Oleksandr
Volynets

Germanium
detectors

Electronics

Electronic
pulses

Additional
feature

Conclusions

- Our aim is to search for $0\nu\beta\beta$
- Higher Q -value is better
- Germanium is a good candidate for $0\nu\beta\beta$ experiments:

Motivation (again)

Germanium detectors and low temperatures

Oleksandr Volynets

Germanium detectors

Electronics

Electronic pulses

Additional feature

Conclusions

- Our aim is to search for $0\nu\beta\beta$
- Higher Q -value is better
- Germanium is a good candidate for $0\nu\beta\beta$ experiments:
 - $Q_{\beta\beta} = 2039$ keV for ^{76}Ge
 - Germanium detectors are very sensitive to radiation

Oleksandr Volynets

Germanium detectors

Electronics

Electronic pulses

Additional feature

Conclusions

Germanium dioxide

High-purity Very-expensive
Gently-operated 18-fold-segmented
Germanium detector

Why should germanium detectors feel cold and be at high voltage?

Germanium detectors and low temperatures

Oleksandr Volynets

Germanium detectors

Electronics

Electronic pulses

Additional feature

Conclusions

- They are semiconductors, cooling down reduces thermal movement of electrons and the band gap.

Temperature: 70-100K

- Electrical field reduces number of electrons in conduction band: depletion. Voltage applied: 2-3kV
- When a particle hits the detector the clear signal can be collected by high electrical field as no other charge carriers present.

Why should germanium detectors feel cold and be at high voltage?

Oleksandr Volynets

Germanium detectors

Electronics

Electronic pulses

Additional feature

Conclusions

- They are semiconductors, cooling down reduces thermal movement of electrons and the band gap.
Temperature: 70-100K
- Electrical field reduces number of electrons in conduction band: depletion. **Voltage applied: 2-3kV**
- When a particle hits the detector the clear signal can be collected by high electrical field as no other charge carriers present.

- High-purity detector (electrically active impurities concentration $\sim 10^{10-11} \text{cm}^{-3}$)
- Segmented 18-fold ($3z \times 6\phi$)
- Operation voltage 2000 V

Germanium detectors and low temperatures

Germanium
detectors

Electronics

Electronic
pulses

Additional
feature

Conclusions

Rise time

Rise time $\sim v^{-1}$

- v - Velocity of charge carriers (electrons, holes)

A bit of theory

Germanium
detectors and
low
temperatures

Oleksandr
Volynets

Germanium
detectors

Electronics

Electronic
pulses

Additional
feature

Conclusions

Rise time

$$\text{Rise time} \sim \nu^{-1}$$

Velocity of charge carriers

$$\nu = \mu \cdot \mathcal{E}$$

- ν - Velocity of charge carriers (electrons, holes)
- μ - mobility;
- \mathcal{E} - electrical field;

A bit of theory

Germanium
detectors and
low
temperatures

Oleksandr
Volynets

Germanium
detectors

Electronics

Electronic
pulses

Additional
feature

Conclusions

Rise time

$$\text{Rise time} \sim \tau^{-1}$$

Velocity of charge carriers

$$\mathbf{v} = \mu \cdot \mathcal{E}$$

Mobility

$$\mu \sim T^{-3/2}$$

- \mathbf{v} - Velocity of charge carriers (electrons, holes)
- μ - mobility;
- \mathcal{E} - electrical field;
- T - temperature;

A bit of theory

Electronic
pulses

**Additional
feature**

Conclusions

Reminder: diode properties

Germanium detectors and low temperatures

Oleksandr Volynets

Germanium detectors

Electronics

Electronic pulses

Additional feature

Conclusions

- Germanium is a semiconductor material
- Germanium detector acts as a diode in reversed mode:

Leakage current

Germanium
detectors and
low
temperatures

Oleksandr
Volynets

Germanium
detectors

Electronics

Electronic
pulses

**Additional
feature**

Conclusions

- Leakage current is expected to be $\sim 100\text{pA}$ for wide temperature range (50 – 200 K)

Leakage current

Germanium
detectors and
low
temperatures

Oleksandr
Volynets

Germanium
detectors

Electronics

Electronic
pulses

Additional
feature

Conclusions

- Leakage current is expected to be $\sim 100\text{pA}$ for wide temperature range (50 – 200 K) **in a working detector**

Leakage current

Germanium
detectors and

Electronics

Electronic pulses

Additional feature

Conclusions

Leakage current of Siegfried-II

New temperature monitoring method revealed!

Summary

Germanium
detectors and
low
temperatures

Oleksandr
Volynets

Germanium
detectors

Electronics

Electronic
pulses

Additional
feature

Conclusions

- Germanium detectors are a perfect tool for $0\nu\beta\beta$: detector and source
- Detector manufacture and operation are complicated procedures
- Stability of operation is important, all deviations have to be understood

Summary

Germanium
detectors and

temperatures

Oleksandr
Volynets

Germanium
detectors

Electronics

Electronic
pulses

Additional
feature

Conclusions

- Germanium detectors are a perfect tool for $0\nu\beta\beta$: detector and source
- Detector manufacture and operation are complicated procedures
- Stability of operation is important, all deviations have to be understood
- There is a strong temperature dependence of pulse parameters
- It is crucial for analysis on pulse shapes!
- There is an additional temperature monitoring method
