Motivation

LEGEND

Large Enriched Germanium Experiment for Neutrinoless $\beta\beta$ Decay

T 15.4: **LEGEND** Experiment
Monday, March 20, 2023, 17:15–17:30

Outline

Segmented Broad Energy germanium detector

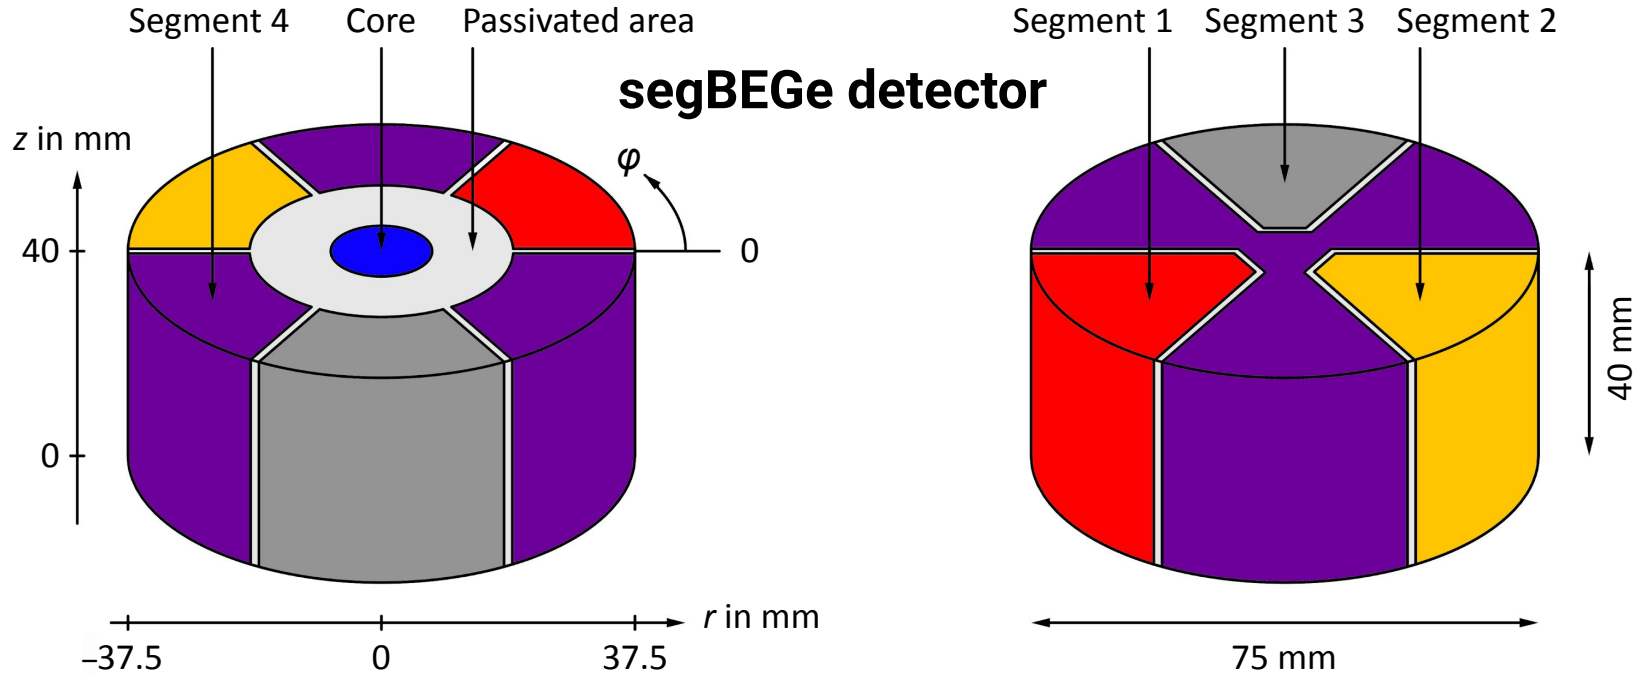

Experimental setup:
Compton Scanner

Compton imaging of
undepleted regions

Segmented Broad Energy Germanium Detector

I. Abt et al., Nucl. Instr. Meth. A **925**: 172 (2019)
 doi:10.1016/j.nima.2019.02.005, arXiv: 1810.10332

Segmented Broad Energy Germanium Detector

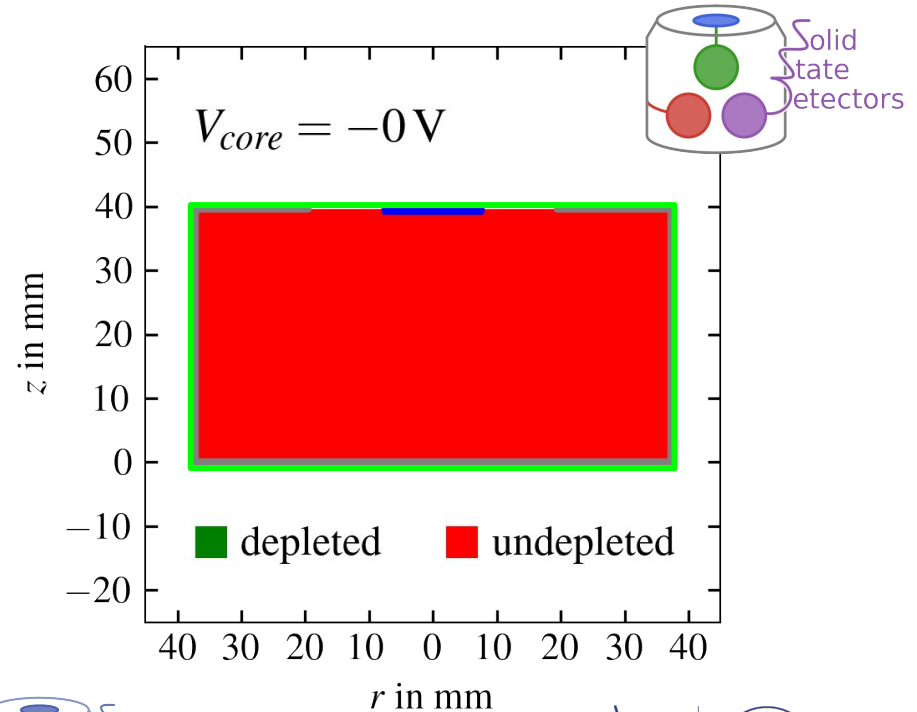

Values in the specification sheet of the detector:

Net carrier concentration:

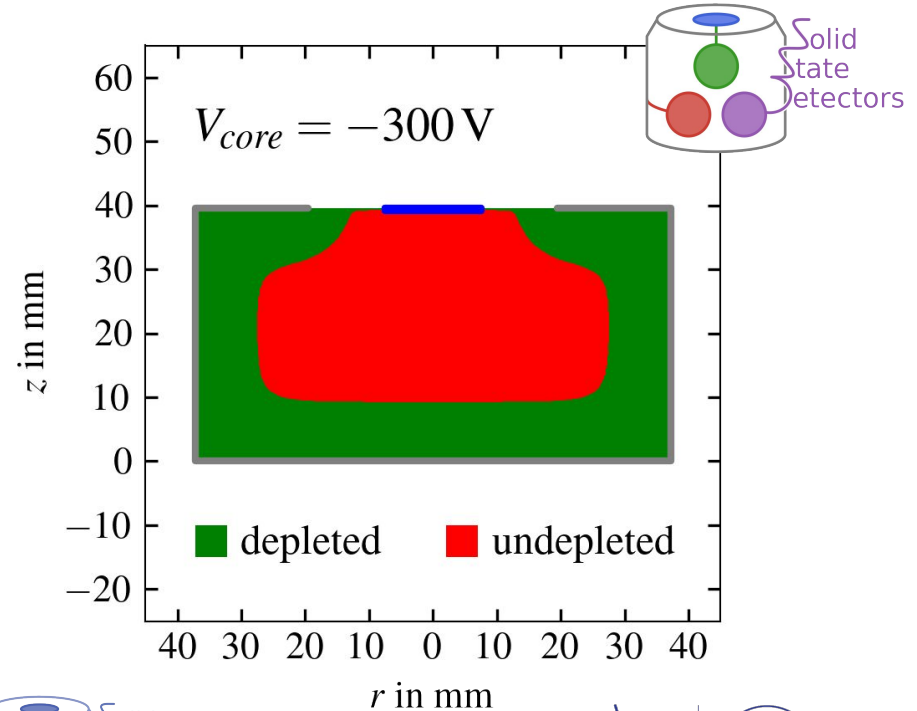

- Top surface: $0.65 \cdot 10^{10} \text{ cm}^{-3}$
- Bottom surface: $0.58 \cdot 10^{10} \text{ cm}^{-3}$

Note: The net impurity concentration is given by the crystal grower and could be different than the values calculated from depletion measurements.

Rates of Compton Reconstructed Events

Rates of Compton Reconstructed Events

Efficiency

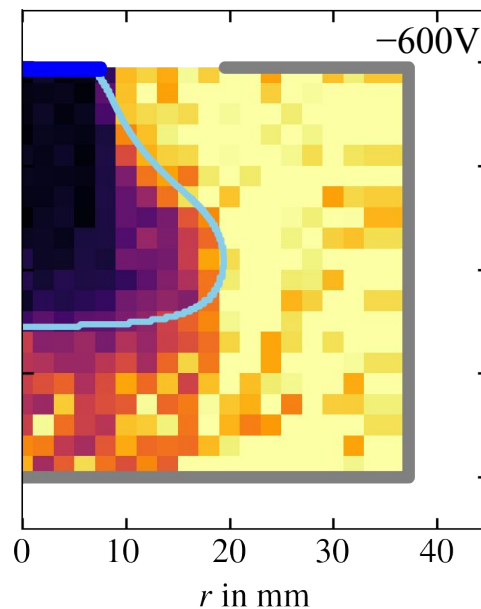

$$\text{Efficiency} = \frac{\text{Event rate and undepleted voltage}}{\text{Event rate and reference voltage } -3000\text{V}}$$

Comparison to Simulation

— Simulated undepleted region using the manufacturer values
(scaled by a factor to match the measured depletion voltage)

Comparison to Simulation

— Simulated undepleted region using the manufacturer values (scaled by a factor to match the measured depletion voltage)

— Simulated undepleted region using an impurity profile with a linear radial dependence: $\rho(r) = \rho_0 \cdot (1 - r/R)$

Summary

Segmented Broad Energy
germanium detector

I. Abt et al., Nucl. Instr. Meth. A **925**: 172 (2019)
doi:10.1016/j.nima.2019.02.005, arXiv: 1810.10332

Compton imaging undepleted
regions with the Compton Scanner

I. Abt et al., Eur. Phys. J. C **82**: 936 (2022)
doi:10.1140/epjc/s10052-022-11064-8, arXiv: 2202.03116

Comparison to simulation to
estimate the impurity density

I. Abt et al., J. Instr. **16**: P08007 (2021)
doi:10.1088/1748-0221/16/08/P08007, arXiv: 2104.00109
